Nahas, William D. M. Paton, 1979 Hardbound A comprehensive review of the effects of cannabinoids on cellular metabolism reproduction and brain function containing 50 contributions written by the leading researchers in the field For the first time the drug is shown to have marked effects on a whole host of cellular and bodily functions at dosages found in those taking marihuana on a regular basis      **Biology and ecology of weeds** W. Holzner, M. Numata, 2013-03-14 Weeds are a fascinating study for specialists not only because of their economic importance but also since in this case biology must be combined with history and agriculture and

its economic aspects Thus weed scientists may be concerned with pure basic research concentrating on general aspects or with applied science i e having a practical orientation One of the aims of this book is to create a synthesis between these two branches of study and to review the literature of both fields The agrestals the weeds of arable land the most important group from an economic point of view was chosen as the main topic Other weed groups could only be mentioned briefly e g grassland weeds or superficially e g aquatic weeds or had to be omitted completely e g ruderals because they are so heterogeneous to keep this volume to an acceptable size and price Nevertheless nearly all subsections of botanical science have been treated

*Cannabinoids As Therapeutic Agents*

Raphael Mechoulam,2019-06-13 Published in 1986 The plant *Cannabis sativa* L and its numerous preparations have been used as therapeutic agents for millenia In the present book the editor has tried to summarize the use in the past to present an overview of modern research and applications to predict future developments

Psychotropic Agents ,2012-12-06 The description of the pharmacology of psychotomimetics cannabis and alcohol in this third volume concludes the discussion on psychotropic agents As psychomotor stimulants these groups of psychotropic agents are of little or no therapeutic relevance but since they are used in a nonmedical manner or are even considered by some groups of the population as social commodities their behavioral effects and psychopharmacological properties are not the concern of the pharmacologist alone The same is true of psychotomimetics as well as cannabis and its components Psychotomimetics have a social history going back many hundreds of years and are among the most potent psychotropic agents known to man The closing description of psychopharmacology also deals with the psychotropic effects of a number of drugs not primarily considered to be psychotropic Their psychotropic effects are either an inherent constituent of their therapeutic profile as is the case with opiates hypnotics and caffeine or they may occur indirectly as side effects or accompanying effects during therapy This applies to  $\beta$  adrenoreceptor antagonists and anticholinergics The editors are also aware that a description of psychotropic agents would not have been complete without discussing the medical ethical and legal aspects of the development clinical testing and use of such drugs
