Marine Protected Areas Principles And Techniques For Management:

Marine Protected Areas S. Gubbay, 2012-12-06 Marine protected areas MPAs have an important role in marine conservation programmes around the world. Although most have been established relatively recently when compared with protected areas on land, there is considerable expertise on their identification, setting up and management. Some techniques have been adapted from those used on land. Others are novel and unique to marine conservation. The chapters in this book give an insight into this fast developing field where experiment and innovation work alongside techniques which have been tried and tested. The guiding principles behind key stages in the setting up and management of MPAs are described and case studies illustrate how they have worked. While it is most encouraging to read about the successes, the case studies also point to difficulties which have been encountered. Not all of the examples are new or recent but together they illustrate what is happening in this field.

Governing Marine Protected Areas Peter Jones, 2014-02-24 In this innovative volume the author addresses some important challenges related to the effective and equitable governance of marine protected areas MPAs. These challenges are explored through a study of 20 MPA case studies from around the world. A novel governance analysis framework is employed to address some key questions: How can top down and bottom up approaches to MPA governance be combined? What does this mean in reality in different contexts? How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits? The author explores the many issues that these questions raise as well as exploring options for addressing them. A key theme is that MPA governance needs to combine people, state and market approaches rather than being based on one approach and its related ideals. Building on a critique of the governance analysis framework developed for common pool resources, the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs. This interdisciplinary analysis is aimed at supporting the development of MPA governance approaches that build social ecological resilience through both institutional and biological diversity. It will also make a significant contribution to wider debates on natural resource governance as it poses some critical questions for contemporary approaches to related research and offers an alternative theoretical and empirical approach.

Integrated Protected Area Management Michael Walkey, Ian R. Swingland, Shaun Russell, 2012-12-06 Protected areas have become an increasingly important tool both in the conservation of biodiversity and in revenue generation through sustainable use. This is the only sure way to guarantee the protection necessary for many species, habitats and ecosystems in the future. Integrated Protected Area Management features contributions that consider the design, management and sustainable use of these regions. Three principal aspects are considered: the theory and practice of designation; community based conservation; and the concept of sustainability, identifying priorities for management. The emphasis throughout is on the importance of an interdisciplinary approach to planning and the active involvement of all stakeholders in decision making processes as a means of ensuring long term sustainability.

Routledge Handbook of Ocean Resources and Management Hance D. Smith, Juan Luis Suárez de Vivero, Tundi S. Agardy, 2015-10-16 This comprehensive handbook provides a global overview of ocean resources and management by focusing on critical issues relating to human development and the marine environment their interrelationships as expressed through the uses of the sea as a resource and the regional expression of these themes The underlying approach is geographical with prominence given to the biosphere political arrangements and regional patterns all considered to be especially crucial to the human understanding required for the use and management of the world's oceans Part one addresses key themes in our knowledge of relationships between people and the sea on a global scale including economic and political issues and understanding and managing marine environments Part two provides a systematic review of the uses of the sea grouped into food ocean space materials and energy and the sea as an environmental resource Part three on the geography of the sea considers management strategies especially related to the state system and regional management developments in both core economic regions and the developing periphery Chapter 23 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution Non Commercial No Derivatives 3.0 license <https://www.routledgehandbooks.com/doi/10.4324/9780203115398.ch23>

Marine Protected Areas and Ocean Conservation Tundi S. Agardy, 1997-03-20 This book reviews the need for marine conservation summarizes general measures for ocean and coastal conservation and explains the rationale for establishing marine protected areas The second half of the book is essentially a guideline for designing and implementing protected areas in order to make them viable and long lasting in their effectiveness

Molecular Markers, Natural History and Evolution J. C. Avise, 1993-09-30 Molecular approaches have opened new windows on a host of ecological and evolutionary disciplines ranging from population genetics and behavioral ecology to conservation biology and systematics Molecular Markers Natural History and Evolution summarizes the multifaceted discoveries about organisms in nature that have stemmed from analyses of genetic markers provided by polymorphic proteins and DNAs The first part of the book introduces rationales for the use of molecular markers provides a history of molecular phylogenetics and describes a wide variety of laboratory methods and interpretative tools in the field The second and major portion of the book provides a cornucopia of biological applications for molecular markers organized along a scale from micro evolutionary topics such as forensics parentage kinship population structure and intra specific phylogeny to macro evolutionary themes including species relationships and the deeper phylogenetic structure in the tree of life Unlike most prior books in molecular evolution the focus is on organismal natural history and evolution with the macromolecules being the means rather than the ends of scientific inquiry Written as an intellectual stimulus for the advanced undergraduate graduate student or the practicing biologist desiring a wellspring of research ideas at the interface of molecular and organismal biology this book presents material in a manner that is both technically straightforward yet rich with concepts and with empirical examples from the world of nature

Managing Protected Areas Michael Lockwood, Graeme

Worboys,Ashish Kothari,2012-05-04 This handbook produced by world renowned experts from the World Conservation Union IUCN spans the full terrain of protected area management and is the international benchmark for the field The book employs dozens of detailed international cases studies hundreds of concise topical snapshots maps tables illustrations and a colour plate section as well as evaluation tools checklists and numerous appendices to cover all aspects of park management from biodiversity to natural heritage to financial management The book establishes a conceptual underpinning for protected area management presents guiding principles for the 21st century reflects recent work on international best practice and provides an assessment of skills required by professionals As the most authoritative guide ever compiled to the principles and practice of protected area management this volume is essential for all professionals and students in all countries and contexts

Elements of Marine Ecology Frances Dipper,R V TAIT (DECD),1998-01-12 The broad definition of ecology is the study of organisms in relation to their surroundings This book presents marine ecology as a coherent science providing undergraduate students with an essential foundation of knowledge in the structure and functioning of marine ecosystems The fourth edition has been thoroughly revised and updated to meet the needs of today s courses A new chapter Human impact on the marine environment focuses on issues such as marine pollution global warming ocean management marine nature reserves and the effects of fisheries and aquaculture New material has also been added on deep sea hydrothermal vents and coral reefs features such as El Nino and ocean processes including the microbial loop dissolved organic matter DOM and dimethyl sulphide DMS A highly accessible survey for undergraduate students A classic text completely revised and updated by a new author A new chapter covers the topical area of human impacts on the marine environment

National Parks and Protected Areas James Gordon Nelson,Rafal Serafin,2013-06-29 National parks and protected areas offer a wealth of ecological and social contributions or services to humans and life on earth This book describes the strengths of national parks and protected areas in different parts of Europe and North America and the challenges to the full realization of their goals It shows that they are useful not only in conserving rare species and biodiversity but also in protecting water supply and other resources necessary to tourism and to economic and social development generally Ideas and information on useful planning management and decision making arrangements are presented and research needs are identified

A Dual Approach to Ocean Governance Yoshifumi Tanaka,2016-03-23 Taking the North East Atlantic Ocean as an example of regional practice this book addresses the dual approach to ocean governance in international law It examines the interaction between zonal and integrated management approaches and the conservation of marine living resources and marine biological diversity The study examines the limitations of the traditional zonal approach and suggests new possibilities for conformity between sovereign states international law and sustainable development

Areas Guido Visconti, Martin Beniston, Emilio D. Iannorelli, Diego Barba, 2006-04-11 High mountains can be considered as particularly appropriate environments to detect effects of climate change on natural biocoenoses in a global scale for the following reasons Firstly ecosystems at the temperature limits of plant life are generally thought to be especially sensitive to climate change 1 2 3 An already ongoing upward shift of vascular plants at high summits in the Alps determined by the Austrian IGBP research 4 5 6 7 8 is most likely a response to the atmospheric warming since the 19th century Secondly high mountains still comprise the most natural ecosystems in many countries being largely untouched by human settlements and agricultural influences Therefore climatic effects on ecosystems can be studied without masking effects from human land use Thirdly high mountain ranges are present in virtually every major zoobiome of the earth The research initiative GLORIA aims to establish an urgently needed global monitoring network by using high mountain ecosystems as sensitive indicators as required in the IGBP Mountain Workplan 9 Moreover a deeper understanding of assemblage mechanisms and assemblage processes in vegetation patterns as a contribution to ecological theory can be expected This paper gives a short general overview about GLORIA and a first outline about the concept method and some few results of the Multi Summit Approach one of the basic intentions within the proposed network It aims to encourage the involvement of high mountain researchers and research coordinators in a detailed discussion of the proposed research activities and in a co operation within the planned global monitoring network

Marine Policy and Economics Porter Hoagland, John H. Steele, Steve A. Thorpe, 2010 This title is an important reference on current knowledge and expertise in one convenient and accessible source The selected articles all written by experts in their field fall into several categories

Marine and Coastal Protected Areas Rodney V. Salm, John R. Clark, Erkki Siirila, 2000 This is a new edition of the classic textbook on marine protected area MPA management in the tropics originally produced as an output of the Bali World Parks Congress in 1982 Approaches to planning and managing MPAs have evolved considerably Major advances include innovative financing mechanisms partnerships with the private sector and NGOs and collaborative management between government and coastal communities These advances have brought new approaches for MPA establishment and management that are more participatory involving communities through interaction and collaboration rather than prescription With new case studies and illustrations the guide comes in a water resistant cover for field use It is intended for those who plan individual and or national MPA systems and gives philosophical context for MPAs along with some basic principles and approaches

Ecology and Conservation of Amphibians Trevor Beebee, 1996-03-31 This volume sets out to provide an overview of recent research on all aspects of amphibian ecology and behaviour and to illustrate its application to practical conservation measures for this major group of animals Its broad scope makes it of relevance to students of general biology ecology and conservation but also to professionals in industries and agencies involved with environmental issues and nature conservation

Marine Conservation Ecology John

Roff,2013-09-05 This major textbook provides a broad coverage of the ecological foundations of marine conservation including the rationale importance and practicalities of various approaches to marine conservation and management The scope of the book encompasses an understanding of the elements of marine biodiversity from global to local levels threats to marine biodiversity and the structure and function of marine environments as related to conservation issues The authors describe the potential approaches initiatives and various options for conservation from the genetic to the species community and ecosystem levels in marine environments They explore methods for identifying the units of conservation and the development of defensible frameworks for marine conservation They describe planning of ecologically integrated conservation strategies including decision making on size boundaries numbers and connectivity of protected area networks The book also addresses relationships between fisheries and biodiversity novel methods for conservation planning in the coastal zone and the evaluation of conservation initiatives Conservation and the Use of Wildlife Resources Melvin

Bolton,2012-12-06 Not everybody cares about the fate of wild animals or the state of the natural environment I met a lady who said it wouldn't worry her if all the wild animals in the world disappeared overnight She was a city person she said There are also people who would prefer to let animals become extinct than to have them kept in captivity no matter how progressive the zoo There are those who on principle will not eat meat let alone do the killing and there are those who enjoy nothing so much as shooting birds People in the last two camps may oppose each other in claiming to be conservationists Extremists are unlikely to find their opinions being reversed by this book but because of the scope of the subject I believe there is a good chance that anybody with an interest in wildlife will find in it something new to think about It may not be too much to hope that a few disagreements might also be settled because I suspect there is more common ground than is generally realized among those with opposing views **Conservation of Marine Resources and Sustainable Coastal**

Community Development in Malaysia Muhammad Mehedi Masud,2019-07-26 This book addresses a timely and compelling emerging issue related to the conservation and sustainable use of marine resources and the sustainable development of the coastal community Marine protected areas MPAs make a remarkable contribution to the protection of marine communities by providing sustainable livelihoods deriving financial benefits from the development of fisheries and tourism as well as by restoring ocean productivity and preventing further environmental degradation These areas have been considered the cornerstone of a blue economy due to their substantial economic social and environmental contributions However MPAs around the world are severely hampered by a multitude of issues and challenges such as inefficient management poor socioeconomic conditions and environmental degradation due to human activities overexploitation of marine resources degradation of water quality massive waste production and climate change These are the main obstacles to economic social and environmental sustainability Hence a collaborative management approach and an integrated management policy framework is urgently needed for the economic social political cultural technological and ecological
