Mathematical Exploration Of The Environment:

Mathematical Exploration of the Environment István Bán, 1995 One of the most important tasks of mathematics is to describe or approximate the phenomena of nature as exactly as possible and to provide a useful tool in the exploration of nature For a deeper understanding of natural phenomena we need a systematized definition of the most important mathematical notions and statements In this book a new concept of the structure of the environment is introduced The environment has a porous structure This concept applies sets of state characteristic values The book provides a mathematical method which can process a very high number and different kinds of state characteristic values surveys the complex correlations and explains the structure and the local and global properties of the environment by means of a novel mathematical interpretation

The Effective Teaching of Mathematics Malcolm Simmons, 2014-09-11 First published in 1993 This series has been written for trainee teachers wishing to improve their teaching skills as well as for in service teachers especially those engaged in the supervision of trainees The book provides an overview of mathematics teaching at secondary level and links established mathematics content to recent curriculum developments in mathematics teaching in England and Wales and in Scotland The main purpose of the book is to instigate and complement good mathematics teaching practice in our classrooms

Teaching Young Children Mathematics Janice Minetola, Robert G. Ziegenfuss, J. Kent Chrisman, 2013-09-11 Teaching Young Children Mathematics provides a comprehensive overview of mathematics instruction in the early childhood classroom Taking into account family differences language barriers and the presence of special needs students in many classrooms throughout the U S this textbook situates best practices for mathematics instruction within the larger frameworks of federal and state standards as well as contemporary understandings of child development Key topics covered include developmental information of conceptual understanding in mathematics from birth through 3rd grade use of national and state standards in math including the new Common Core State Standards information for adapting ideas to meet special needs and English Language Learners literacy connections in each chapter real world connections to the content and information for family connections to the content

Learning Mathematics and Logo Celia Hoyles, Richard Noss, 1992 These original essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the

mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics

The Language of Mathematics Bill Barton, 2007-12-24 The book emerges from several contemporary concerns in mathematics language and mathematics education However the book takes a different stance with respect to language by combining discussion of linguistics and mathematics using examples from each to illustrate the other The picture that emerges is of a subject that is much more contingent much more relative much more subject to human experience than is usually accepted Another way of expressing this is that the thesis of the book takes the idea of mathematics as a human creation and using the evidence from language comes to more radical conclusions than most writers allow

Windows on Mathematical Meanings Richard Noss, Celia Hoyles, 1996-06-30 This book challenges some of the conventional wisdoms on the learning of mathematics The authors use the computer as a window onto mathematical meaning making The pivot of their theory is the idea of webbing which explains how someone struggling with a new mathematical idea can draw on supportive knowledge and reconciles the individual's role in mathematical learning with the part played by epistemological social and cultural forces

Digital Technologies in Designing Mathematics Education Tasks Allen Leung, Anna Baccaglini-Frank, 2016-10-12 This book is about the role and potential of using digital technology in designing teaching and learning tasks in the mathematics classroom Digital technology has opened up different new educational spaces for the mathematics classroom in the past few decades and as technology is constantly evolving novel ideas and approaches are brewing to enrich these spaces with diverse didactical flavors A key issue is always how technology can or cannot play epistemic and pedagogic roles in the mathematics classroom The main purpose of this book is to explore mathematics task design when digital technology is part of the teaching and learning environment What features of the technology used can be capitalized upon to design tasks that transform learners experiential knowledge gained from using the technology into conceptual mathematical knowledge When do digital environments actually bring an essential educationally speaking new dimension to classroom activities What are some pragmatic and semiotic values of the technology used These are some of the concerns addressed in the book by expert scholars in this area of research in mathematics education This volume is the first devoted entirely to issues on designing mathematical tasks in digital teaching and learning environments outlining different current research scenarios
