### **Mathematical Logic and Probability With Basic Programming [By] William S. Dorn, Herbert J. Greenberg**

**[And] Mary K. Keller** William S. Dorn, Mary K. Keller, Herbert J. Greenberg, 1973     *Mathematics Elsewhere* Marcia Ascher, 2018-06-05 Mathematics Elsewhere is a fascinating and important contribution to a global view of mathematics. Presenting mathematical ideas of peoples from a variety of small scale and traditional cultures it humanizes our view of mathematics and expands our conception of what is mathematical. Through engaging examples of how particular societies structure time reach decisions about the future make models and maps systematize relationships and create intriguing figures Marcia Ascher demonstrates that traditional cultures have mathematical ideas that are far more substantial and sophisticated than is generally acknowledged. Malagasy divination rituals for example rely on complex algebraic algorithms. And some cultures use calendars far more abstract and elegant than our own. Ascher also shows that certain concepts assumed to be universal that time is a single progression for instance or that equality is a static relationship are not. The Basque notion of equivalence for example is a dynamic and temporal one not adequately captured by the familiar equal sign. Other ideas taken to be the exclusive province of professionally trained Western mathematicians are in fact shared by people in many societies. The ideas discussed come from geographically varied cultures including the Borana and Malagasy of Africa, the Tongans and Marshall Islanders of Oceania, the Tamil of South India, the Basques of Western Europe and the Balinese and Kodi of Indonesia. This book belongs on the shelves of mathematicians, math students and math educators and in the hands of anyone interested in traditional societies or how people think. Illustrating how mathematical ideas play a vital role in diverse human endeavors from navigation to social interaction to religion it offers through the vehicle of mathematics unique cultural encounters to any reader     Catalog of Copyright Entries. **BASIC Microcomputing and Biostatistics** Donald W. Rogers, 2012-12-06 BASIC Microcomputing and Biostatistics is designed as the first practical how to guide to both computer programming in BASIC and the statistical data processing techniques needed to analyze experimental clinical and other numerical data. It provides a small vocabulary of essential computer statements and shows how they are used to solve problems in the biological, physical and medical sciences. No mathematical background beyond algebra and an inkling of the principles of calculus is assumed. All more advanced mathematical techniques are developed from scratch before they are used. The computing language is BASIC a high level language that is easy to learn and widely available using time sharing computer systems and personal microcomputers. The strategy of the book is to present computer programming at the outset and to use it throughout. BASIC is developed in a way reminiscent of graded readers used in human languages the first programs are so simple that they can be read almost without an introduction to the language. Each program thereafter contains new vocabulary and one or more concepts.

explained in the text not used in the previous ones By gradual stages the reader can progress from programs that do nothing more than count from one to ten to sophisticated programs for nonlinear curve fitting matrix algebra and multiple regression There are 33 working programs and except for the introductory ones each performs a useful function in everyday data processing problems encountered by the experimentalist in many diverse fields    *The American Mathematical Monthly*

Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics. It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985. The annotated translation consists of ten volumes including a special index volume. There are three kinds of articles in this ENCYCLOPAEDIA. First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results and techniques.

*Handbook of Research on Engineering Education in a Global Context* Smirnova, Elena V., Clark, Robin P., 2018-08-31

Engineering education methods and standards are important features of engineering programs that should be carefully designed both to provide students and stakeholders with valuable active integrated learning experiences and to provide a vehicle for assessing program outcomes. With the driving force of the globalization of the engineering profession standards should be developed for mutual recognition of engineering education across the world but it is proving difficult to achieve. The Handbook of Research on Engineering Education in a Global Context provides innovative insights into the importance of quality training and preparation for engineering students. It explores the common and current problems encountered in areas such as quality and standards management, information systems, innovation and enhanced learning technologies in education as well as the challenges of employability, entrepreneurship and diversity. This publication is a vital reference source for science and engineering educators, engineering professionals and educational administrators interested in topics centered on the education of students in the field of engineering.
