The mathematical theory of the top Felix Klein, 1967 This collection of essays by a distinguished mathematician and teacher examines important issues of dynamics from the viewpoint of the theory of functions of the complex variable Based on a series of lectures delivered by Felix Klein in conjunction with Princeton University's 150th anniversary these presentations center on the problem inherent in the motion of a top that is a rigid body rotating about an axis when a single point in this axis other than the center of gravity is fixed in position The contents of this volume render discussions of dynamics related issues simpler more attractive and relevant not only to mathematicians but also to engineers physicists and astronomers Unabridged republication of the classic 1897 edition     **The Mathematical Theory of the Top** Félix Klein, 2015-08-08 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant     *The Mathematical Theory of the Top* Felix Klein, 2015-06-17 Excerpt from *The Mathematical Theory of the Top* Lectures Delivered on the Occasion of the Sesquicentennial Celebration of Princeton University These lectures on the analytical formul relating to the motion of the top were delivered on Monday Tuesday Wednesday and Thursday October 12 15 1896 They were reported and prepared in manuscript form by Professor H B Fine of Princeton University and the manuscript was revised by Professor Klein About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works     **The Mathematical Theory of the Top** Felix Klein, 1976     *The Mathematical Theory of the Top* Felix Klein, 2015-08-08 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the

G. Greenhill,1900      **Mathematical Theory of Optimization** Ding-Zhu Du,Panos M. Pardalos,Weili

Wu,2013-03-14 Optimization is of central importance in all sciences Nature inherently seeks optimal solutions For example light travels through the shortest path and the folded state of a protein corresponds to the structure with the minimum potential energy In combinatorial optimization there are numerous computationally hard problems arising in real world applications such as floorplanning in VLSI designs and Steiner trees in communication networks For these problems the exact optimal solution is not currently real time computable One usually computes an approximate solution with various kinds of heuristics Recently many approaches have been developed that link the discrete space of combinatorial optimization to the continuous space of nonlinear optimization through geometric analytic and algebraic techniques Many researchers have found that such approaches lead to very fast and efficient heuristics for solving large problems Although almost all such

heuristics work well in practice there is no solid theoretical analysis except Karmakar s algorithm for linear programming With this situation in mind we decided to teach a seminar on nonlinear optimization with emphasis on its mathematical foundations This book is the result of that seminar During the last decades many textbooks and monographs in nonlinear optimization have been published Why should we write this new one What is the difference of this book from the others The motivation for writing this book originated from our efforts to select a textbook for a graduate seminar with focus on the mathematical foundations of optimization
