Strasbourg Master Class on Geometry Athanase Papadopoulos, 2012 This book contains carefully revised and expanded versions of eight courses that were presented at the University of Strasbourg during two geometry master classes in 2008 and 2009 The aim of the master classes was to give fifth year students and Ph D students in mathematics the opportunity to learn new topics that lead directly to the current research in geometry and topology The courses were taught by leading experts The subjects treated include hyperbolic geometry three manifold topology representation theory of fundamental groups of surfaces and of three manifolds dynamics on the hyperbolic plane with applications to number theory Riemann surfaces Teichmüller theory Lie groups and asymptotic geometry The text is aimed at graduate students and research mathematicians It can also be used as a reference book and as a textbook for short courses on geometry

**The Search for Certainty : A Philosophical Account of Foundations of Mathematics** Marcus Giaquinto, 2002-06-06 The nineteenth century saw a movement to make higher mathematics rigorous This seemed to be on the brink of success when it was thrown into confusion by the discovery of the class paradoxes That initiated a period of intense research into the foundations of mathematics and with it the birth of mathematical logic and a new sharper debate in the philosophy of mathematics The *Search for Certainty* examines this foundational endeavour from the discovery of the paradoxes to the present Focusing on Russell's logicist programme and Hilbert's finitist programme Giaquinto investigates how successful they were and how successful they could be These questions are set in the context of a

clear non technical exposition and assessment of the most important discoveries in mathematical logic above all Gödel's undecidability theorems More than six decades after those discoveries Giaquinto asks what our present perspective should be on the question of certainty in mathematics Taking recent developments into account he gives reasons for a surprisingly positive response

### **Zeta and L-Functions of Varieties and Motives**

Bruno Kahn,2020-05-07 The amount of mathematics invented for number theoretic reasons is impressive It includes much of complex analysis the re foundation of algebraic geometry on commutative algebra group cohomology homological algebra and the theory of motives Zeta and L functions sit at the meeting point of all these theories and have played a profound role in shaping the evolution of number theory This book presents a big picture of zeta and L functions and the complex theories surrounding them combining standard material with results and perspectives that are not made explicit elsewhere in the literature Particular attention is paid to the development of the ideas surrounding zeta and L functions using quotes from original sources and comments throughout the book pointing the reader towards the relevant history Based on an advanced course given at Jussieu in 2013 it is an ideal introduction for graduate students and researchers to this fascinating story

**The Rising Sea** Ravi Vakil,2025-10-21 An accessible motivated introduction to one of the most dynamic areas of mathematics Decades ago Mumford wrote that algebraic geometry seems to have acquired the reputation of being esoteric exclusive and very abstract with adherents who are secretly plotting to take over all the rest of mathematics The revolution has now fully come to pass and has fundamentally changed how we think about many fields of mathematics This book provides a thorough foundation in the powerful ideas that now shape the landscape with an informal yet rigorous exposition that builds intuition for understanding the formidable machinery It begins with a discussion of categorical thinking and sheaves and then develops the notion of schemes and varieties as examples of geometric spaces before discussing their specific aspects The book goes on to cover topics such as dimension and smoothness vector bundles and their natural generalizations and important cohomological tools and their applications Important optional topics are included in starred sections Provides a comprehensive introduction certain to become the standard on the subject Features a wealth of exercises that enable students to learn by doing Requires few prerequisites developing the tools students need to succeed from category theory and sheaf theory to commutative and homological algebra Uses an example driven approach that builds mathematical intuition Is a self contained textbook for graduate students and an essential reference for researchers

**A Richer Picture of Mathematics** David E. Rowe,2018-02-13 Historian David E Rowe captures the rich tapestry of mathematical creativity in this collection of essays from the Years Ago column of The Mathematical Intelligencer With topics ranging from ancient Greek mathematics to modern relativistic cosmology this collection conveys the impetus and spirit of Rowe's various and many faceted contributions to the history of mathematics Centered on the Göttingen mathematical tradition these stories

illuminate important facets of mathematical activity often overlooked in other accounts Six sections place the essays in chronological and thematic order beginning with new introductions that contextualize each section The essays that follow recount episodes relating to the section s overall theme All of the essays in this collection with the exception of two appeared over the course of more than 30 years in *The Mathematical Intelligencer* Based largely on archival and primary sources these vignettes offer unusual insights into behind the scenes events Taken together they aim to show how G ttingen managed to attract an extraordinary array of talented individuals several of whom contributed to the development of a new mathematical culture during the first decades of the twentieth century
