Mathematical

Philosophy Cassius Jackson Keyser, 2001-06-01 Mathematical Philosophy A Study of Fate and Freedom Mathematics is not what many people think it is it is not a system of mere formulas and theorems Mathematics is the science of exact thought or rigorous thinking and one of its distinctive characteristics is precision sharpness completeness of definitions This quality alone is sufficient to explain why people generally do not like mathematics and why even some scientists bluntly refuse to have anything to do with problems wherein mathematical reasoning is involved In the meantime mathematical philosophy has very little if anything to do with mere calculations or with numbers as such or with formulas it is a philosophy wherein precise sharp and rigorous thinking is essential Those who deliberately refuse to think rigorously that is mathematically in connections where such thinking is possible commit the sin of preferring the worse to the better they deliberately violate the supreme law of intellectual rectitude For years Keyser meditated upon the nature of mathematics upon its significance in thought and upon its bearings on human life In the following course of lectures he endeavored to present in the language of educated men and women some of the maturer fruits of that study Though the course is designed primarily for students whose major interest is in philosophy Keyser ventured to hope that a much wider circle of readers and scholars might enjoy the lectures To all the professional mathematicians the teachers of mathematics natural science students literary critics sociologists and the rapidly increasing class of engineers who desire to come into touch with the universal spirit of the science that Plato called divine In 1922 when *Mathematical Philosophy* was originally published Dr Cassius J Keyser was Adrain Professor Mathematics at Columbia University New York *Mathematical Philosophy* Cassius J. Mathematical Philosophy a Study of Fate and Freedom, Lectures for Educated Laymen Cassius J. Keyser, 2015-06-26

Excerpt from *Mathematical Philosophy a Study of Fate and Freedom Lectures for Educated Laymen* For more than two score years I have meditated upon the nature of Mathematics upon its significance in Thought and upon its bearings on human Life In the following course of lectures I have endeavored to present in the language current among educated men and women some of the maturer fruits of that study Though the course is designed primarily for students whose major interest is in Philosophy I venture to hope that the lectures may not be ungrateful to a much wider circle of readers and scholars To the growing class of such professional mathematicians as are not without interest in the philosophical aspects of their science To the growing class of such teachers of mathematics as endeavor to make the spirit of their subject dominate its technique To the growing class of those natural science students who are interested in the logical structure and the distinctive method of mathematics regarded not only as a powerful instrument for natural science but also and especially as the prototype which

every branch of science approximates in proportion as its basal assumptions and concepts become clearly defined To the innumerable but precious tribe of those literary critics who know that the art of Criticism owes its first allegiance to the eternal laws of thought About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Mathematical Philosophy, a Study of Fate and Freedom** ,1922

Keyser,2017-09-21 In this collection of twenty one lectures Dr Keyser has endeavored to present in the language current among educated men and

women some of the maturer fruits of the study of the nature of mathematics upon its significance in thought and upon its bearing on human life These lectures are designed primarily for students of thought but the author hopes that they may not be ungrateful to a much wider circle of readers and scholars among whom he instances all readers who desire to acquire a fair understanding of such genuinely great mathematical ideas as are accessible to all educated laymen and to come into touch with the universal spirit of the science which Plato called divine What mathematical training is necessary for a proper appreciation of these lectures So much knowledge of algebra geometry and trigonometry as a capable student can acquire in one collegiate year In propounding the question how much mathematical discipline is essential to the appropriate education of men and women as human beings The author clearly and forcibly states the evident tokens and the cardinal constituents of that which in human beings is human and which they possess in some recognizable measure a sense for language for expression in speech the literary faculty a sense for the past for the value of experience the historical faculty a sense for the future for prediction for natural law the scientific faculty a sense for fellowship cooperation and justice the political faculty a sense for the beautiful the artistic faculty a sense for logic for vigorous thinking the mathematical faculty a sense for wisdom for world harmony for cosmic understanding the philosophical faculty and a sense for the mystery of divinity the religious faculty The aim of mathematics says the author is to think vigorously whatever is vigorously thinkable or whatever may become vigorously thinkable in course of the upward striving and refining evolution of ideas And thinking he defines as the handling of ideas as ideas the formation of concepts the combination of concepts into higher and higher ones discernment of the relations subsisting among them embodiment of these relations in the forms of judgments or propositions the ordering and use of these in the construction of doctrine regarding life and the world *Gaither's Dictionary of Scientific Quotations* Carl C.
