Computability in Europe CiE 2009 held in Heidelberg Germany during July 19-24 2009 The 34 papers presented together with 17 invited lectures were carefully reviewed and selected from 100 submissions The aims of the conference is to advance our theoretical understanding of what can and cannot be computed by any means of computation It is the largest international meeting focused on computability theoretic issues

***Sobolev Spaces in Mathematics II*** Vladimir Maz'ya, 2008-11-26 Sobolev spaces become the established and universal language of partial differential equations and mathematical analysis Among a huge variety of problems where Sobolev spaces are used the following important topics are the focus of this volume boundary value problems in domains with singularities higher order partial differential equations local polynomial approximations inequalities in Sobolev Lorentz spaces function spaces in cellular domains the spectrum of a Schrodinger operator with negative potential and other spectral problems criteria for the complete integration of systems of differential equations with applications to differential geometry some aspects of differential forms on Riemannian manifolds related to Sobolev inequalities Brownian motion on a Cartan Hadamard manifold etc Two short biographical articles on the works of Sobolev in the 1930s and the foundation of Akademgorodok in Siberia supplied with unique archive photos of S Sobolev are included

***Sobolev Spaces in Mathematics III*** Victor Isakov, 2008-12-02 This volume marking the centenary of S L Sobolev's birth presents the latest results on some important problems of mathematical physics The book contains two short biographical articles and unique archive photos of S Sobolev

***Sobolev Spaces in Mathematics I*** Vladimir Maz'ya, 2008-12-02 This volume marks the centenary of the birth of the outstanding mathematician of the 20th century Sergey Sobolev It includes new results on the latest topics of the theory of Sobolev spaces partial differential equations analysis and mathematical physics

***Topics in Logic, Philosophy and Foundations of Mathematics, and Computer Science*** Stanisław Krajewski, Stephen Krajewski, 2007 This volume honors Professor Andrzej Grzegorzczuk the nestor of Polish logicians on his 85th anniversary The editors would like to express the respect and sympathy they have for him His textbook *The Outline of Mathematical Logic* has been published in many editions and translated into several languages It was this textbook that introduced many of us into the world of mathematical logic Professor Grzegorzczuk has made fundamental contributions to logic and to philosophy His results mainly on hierarchy of primitive recursive functions known as the Grzegorzczuk hierarchy are of fundamental importance to theoretical computer science In particular they were precursory for the computational complexity theory The editors would like to stress that this special publication celebrates a scientist who is still actively pursuing genuinely innovative directions of research Quite recently Andrzej Grzegorzczuk gave a new proof of undecidability of the first order functional calculus His proof does not use the arithmetization of Kurt Gödel In recognition of his merits the University of Clermont Ferrand conferred to Professor Andrzej Grzegorzczuk the Doctorat Honoris Causa The work and life of Professor Andrzej Grzegorzczuk is presented in the article by Professors Stanisław Krajewski and Jan Wolenski The papers in this collection have been submitted on invitational basis

**Dick de Jongh on Intuitionistic and**

**Provability Logics** Nick Bezhanishvili, Rosalie Iemhoff, Fan Yang, 2024-07-25 This book is dedicated to Dick de Jongh's contributions to the theory of intuitionistic and provability logics. Consisting of 13 chapters written by leading experts, this book discusses de Jongh's original contributions and consequent developments that have helped to shape these fields. The book begins with an autobiographic note by Dick de Jongh which discusses the main themes of his work and places the other contributions in context. The next four chapters explore the De Jongh-Sambin fixed point theorem and other contributions to provability and interpretability logics. The following four chapters focus on modal intuitionistic and intuitionistic modal logics. They discuss independence of formulas, unification, and de Jongh formulas in intuitionistic and modal logics. Then there follow two chapters on the other two areas to which Dick de Jongh made important contributions: the theory of well partial orders and formal learning theory. The second to last chapter on Origami Geometry can be seen as representing the Master of Logic program of the Institute for Logic, Language and Computation (ILLC) in which de Jongh invested a lot of energy. The book ends with a complete bibliography of Dick de Jongh in the last chapter. This volume provides a vital overview and continuation of de Jongh's prolific work in the theory of intuitionistic and provability logics.     Instability in Models Connected with Fluid Flows I

Claude Bardos, Andrei V. Fursikov, 2007-12-20 In this authoritative and comprehensive volume, Claude Bardos and Andrei Fursikov have drawn together an impressive array of international contributors to present important recent results and perspectives in this area. The main subjects that appear here relate largely to mathematical aspects of the theory, but some novel schemes used in applied mathematics are also presented. Various topics from control theory, including Navier-Stokes equations, are covered.     **Introduction to Formal Philosophy** Sven Ove Hansson, Vincent F. Hendricks, 2018-10-24 This Undergraduate Textbook introduces key methods and examines the major areas of philosophy in which formal methods play pivotal roles. Coverage begins with a thorough introduction to formalization and to the advantages and pitfalls of formal methods in philosophy. The ensuing chapters show how to use formal methods in a wide range of areas. Throughout, the contributors clarify the relationships and interdependencies between formal and informal notions and constructions. Their main focus is to show how formal treatments of philosophical problems may help us understand them better. Formal methods can be used to solve problems but also to express new philosophical problems that would never have seen the light of day without the expressive power of the formal apparatus. Formal philosophy merges work in different areas of philosophy as well as logic, mathematics, computer science, linguistics, physics, psychology, biology, economics, political theory, and sociology. This title offers an accessible introduction to this new interdisciplinary research area to a wide academic audience.     **New Waves in Philosophy of Mathematics** O. Bueno, Ø. Linnebo, 2009-09-29 Thirteen promising young researchers write on what they take to be the right philosophical account of mathematics and discuss where the philosophy of mathematics ought to be going. New trends are revealed, such as an increasing attention to mathematical practice, a reassessment of the canon, and inspiration from philosophical logic.     Computability In Context: Computation And Logic In The Real World S. Barry

Cooper,Andrea Sorbi,2011-02-25 Computability has played a crucial role in mathematics and computer science leading to the discovery understanding and classification of decidable undecidable problems paving the way for the modern computer era and affecting deeply our view of the world Recent new paradigms of computation based on biological and physical models address in a radically new way questions of efficiency and challenge assumptions about the so called Turing barrier This volume addresses various aspects of the ways computability and theoretical computer science enable scientists and philosophers to deal with mathematical and real world issues covering problems related to logic mathematics physical processes real computation and learning theory At the same time it will focus on different ways in which computability emerges from the real world and how this affects our way of thinking about everyday computational issues a **Logical**
