**Randomly Forced Nonlinear PDEs and Statistical Hydrodynamics in 2 Space Dimensions** Sergej B. Kuksin, 2006 This book gives an account of recent achievements in the mathematical theory of two dimensional turbulence described by the 2D Navier Stokes equation perturbed by a random force The main results presented here were obtained during the last five to ten years and up to now have been available only in papers in the primary literature Their summary and synthesis here beginning with some preliminaries on partial differential equations and stochastics make this book a self contained account that will appeal to readers with a general background in analysis After laying the groundwork the author goes on to recent results on ergodicity of random dynamical systems which the randomly forced Navier Stokes equation defines in the function space of divergence free vector fields including a Central Limit Theorem The physical meaning of these results is discussed as well as their relations with the theory of attractors Next the author studies the behaviour of solutions when the viscosity goes to zero In the final section these dynamical methods are used to derive the so called balance relations the infinitely many algebraical relations satisfied by the solutions

**Fundamental Problematic Issues in Turbulence** Albert Gyr, Wolfgang Kinzelbach, Arkady Tsinober, 2012-12-06 The Second Monte Verita Colloquium Fundamental Problematic Issues in Turbulence was held in Monte Verita Switzerland on March 23-27 1998 The main goal of the Colloquium was to bring together in the relaxed atmosphere of Monte Verita a group of leading scientists consisting of representatives of different generations and to discuss informally and free of the influence of funding agencies and or other politics of nonscientific nature the basic issues of turbulence The intention was to put major emphasis on the exposition of the problematic aspects and discussions not mere reporting of results i.e. not having just one more meeting For this purpose it was originally thought to leave all the afternoons free of formal presentations at all However this intention became unrealistic due to a number of reasons and in the first place due to strong pressure from various parts of the scientific community and non scientific constraints to broaden the scope and to increase the number of participants as compared to the First Colloquium held in 1991 This resulted in a considerable reduction of time for discussions Nevertheless the remaining time for discussions was much larger than usually allocated at scientific conferences On the scientific side the main idea was to bring together scientists working in turbulence from different fields such as mathematics physics engineering and others In this respect the Colloquium was definitely very successful and resulted in a number of interesting interactions and contacts
