Yingxu Wang, Yiyu Y. Yao, Guoyin Wang, 2008-09-16 The denotational and expressive needs in cognitive informatics computational intelligence software engineering and knowledge engineering have led to the development of new forms of mathematics collectively known as denotational mathematics Denotational mathematics is a category of mathematical structures that formalize rigorous expressions and long chain inferences of system compositions and behaviors with abstract concepts complex relations and dynamic processes Typical paradigms of denotational mathematics are concept algebra system algebra Real Time Process Algebra RTPA Visual Semantic Algebra VSA fuzzy logic and rough sets A wide range of applications of denotational mathematics have been identified in many modern science and engineering disciplines that deal with complex and intricate mathematical entities and structures beyond numbers Boolean variables and traditional sets This issue of Springer's Transactions on Computational Science on Denotational Mathematics for Computational Intelligence presents a snapshot of current research on denotational mathematics and its engineering applications The volume includes selected and extended papers from two international conferences namely IEEE ICCI 2006 on Cognitive Informatics and RSKT 2006 on Rough Sets and Knowledge Technology as well as new contributions The following four important areas in denotational mathematics and its applications are covered Foundations and applications of denotational mathematics focusing on a c temporary denotational mathematics for computational intelligence b denotational mathematical laws of software c a comparative study of STOPA and RTPA and d a denotational mathematical model of abstract games *Structured Matrices in Mathematics, Computer Science, and Engineering II* Vadim Olshevsky, 2001 The collection of the contributions to these volumes offers a flavor of the plethora of different approaches to attack structured matrix problems The reader will find that the theory of structured matrices is positioned to bridge diverse applications in the sciences and engineering deep mathematical theories as well as computational and numerical issues The presentation fully illustrates the fact that the techniques of engineers mathematicians and numerical analysts nicely complement each other and they all contribute to one unified theory of structured matrices Back cover
