**Math Wars** Carmen Latterell, 2004-12-30 This book is written for parents and other interested parties so that

they can understand the great debate taking place in many states in this country about how to teach basic math. The debate centers around the standards written by the National Council of Teachers of Mathematics (NCTM) which call for a radically different approach to mathematics education. Because the issues are so heated between the NCTM-oriented curricula and traditional curricula, the curricula that NCTM-oriented replaced the term Math Wars was coined to describe them. Parents are concerned about their children's math learning. Teachers are concerned about math teaching. When parents see what children are bringing home under the new curriculum, it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school. But the problem goes beyond grades K-12. Post-secondary mathematics courses are the fear of many students. The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college. Besides lack of knowledge about mathematics education, many parents have an additional problem in that they feel they lack knowledge in mathematics itself. This is very intimidating, thus it is difficult for parents to do anything about the confusing state of mathematics education. This book provides some answers.

**Conquering Math Myths with Universal Design** Jenna Mancini Rufo, Ron Martiello, 2024-08-29. The teaching and learning of mathematics have long been haunted by myths. The Math Person Myth: Some people just aren't math people. The Learning Gaps Myth: We can't address grade-level content until students are caught up with their peers. The Answer-Getting Myth: Math is all about getting the right answer. The Rigor Myth: Rigorous math instruction is only for advanced students; it's wasted on those at lower levels. The Single Score Myth: Paper and pencil tests are the only practical way to assess students' math knowledge. The All Children but Myth: Sure, we believe that all children can learn math, except in *Conquering Math Myths with Universal Design*. Jenna Mancini Rufo and Ron Martiello set out to dispel each of these myths, illuminating the path toward more inclusive and accessible math instruction that empowers students to learn, understand, and appreciate the value of mathematics in everyday life. Through the lens of Universal Design for Learning (UDL), the authors address myths that inhibit students' understanding and enjoyment of math. The UDL approach to instructional design provides students with multiple pathways to access information, express knowledge, and engage with content, thus reducing barriers for all students, not just those with learning challenges. Using UDL, you and your students will embrace the idea that we can all be math people. Discover research-based takedowns of common math myths along with practical UDL strategies and tools that you can put to work in your classroom right away. Join the crusade to conquer math myths with UDL.
