Breaking the Cycle of Dependency in K-12 Education: Using Cognitive Science to Guide Instruction.

Regensburger, 2025-03-04 This book seeks to help teachers convert dependent learners into independent learners who can take control of their own learning Part One instructs teachers on the conditions that create dependent learners as well as the principles of human intelligence and learning It discusses some of the myths and controversies concerning these topics It also analyzes the cognitive science research on how students learn and what educational practices best promote new learning The second half of the book addresses how teachers can create and implement classroom practices that promote the principles of learning and convert dependent learners into independent ones The book offers a holistic approach to teaching focusing on classroom management and relationship building writing and oral communication lesson design and assessment and feedback It also examines how direct instruction methods can be used in conjunction with active learning strategies like project based learning to improve student retention of knowledge and increase motivation and engagement and Innovation in Learning, Teaching and Education Arsénio Reis, João Barroso, Paulo Martins, Athanassios Jimoyiannis, Ray Yueh-Min Huang, Roberto Henriques, 2023-01-01 This book constitutes the proceedings of the Third International Conference on Technology and Innovation in Learning Teaching and Education TECH EDU 2022 was held in Lisbon Portugal in August September 2022 The 21 full papers and 18 short paper presented in this volume were carefully reviewed and selected from 80 submissions The papers are organized in the following topical sections Emergent technologies in education Online learning and blended learning Computer science education and STEM Digital tools and STEM learning ICT and critical thinking in higher education Digital transformation in higher education Artificial Intelligence in Education In Search of a Pedagogy of Conflict and Dialogue for Mathematics Education Renuka Vithal, 2012-12-06 In Search of a Pedagogy for Conflict and Dialogue for Mathematics Education is of interest to mathematics educators researchers in mathematics education gender social justice equity and democracy in education and practitioners teachers interested in the use of project work in mathematics teaching and learning This book brings together diverse recent developments exploring social cultural political dimensions in mathematics education It builds theoretical ideas from a careful substantial description of practice in the attempt to improve both theory and practice in mathematics education In doing so it interrogates and develops

theoretical research tools for mathematics education and simultaneously provides ideas for practice in mathematics classrooms Everyday Matters in Science and Mathematics Ricardo Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field's thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed Everyday Matters in Science and Mathematics Studies of Complex Classroom Events is an important resource for researchers teacher educators and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design **Public and Community** Engagement in Health Science Research: Openings and Obstacles for Listening and Responding in the Majority World Gillian Black, Phaik Yeong Cheah, Mary Chambers, Deborah Nyirenda, 2022-10-11 Activating Assessment for All Students Mary Hamm, Dennis Adams, 2009-10-15 Hamm and Adams present models to help teachers identify student learning problems recognizing when to re teach when to move ahead and when to explain or give more examples Activating Assessment for All Students takes all of these into account when it provides differentiated science math methods and goes on to suggest ways that formative assessment practices can inform differentiated teaching learning and assessment These methods promote success for more students by helping teachers develop informative assessment for lessons and related tools for reaching the varying levels of student competencies within their classes This book builds on the expanding knowledge of

what works in classrooms and suggests approaches that can open up individual and group possibilities for science and mathematics instruction It intends to help you answer the following questions What is differentiated instructional assessment How can I amplify the results of DI by using formative assessments How might quality assessment tools like portfolios benefit all students How will I know that differentiated formative assessment works
