*Windows on Mathematical Meanings* Richard Noss, Celia Hoyles, 2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other **The LOGO**

**Syntheses** M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM's Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field *Learning Mathematics and Logo* Celia Hoyles, Richard Noss, 1992 These original essays

summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics

**Intelligent Learning Environments: The Case of Geometry** Jean-Marie

Laborde, 2012-12-06 This book is a thoroughly revised result updated to mid 1995 of the NATO Advanced Research Workshop on Intelligent Learning Environments the case of geometry held in Grenoble France November 13 16 1989 The main aim of the workshop was to foster exchanges among researchers who were concerned with the design of intelligent learning environments for geometry The problem of student modelling was chosen as a central theme of the workshop insofar as geometry cannot be reduced to procedural knowledge and because the significance of its complexity makes it of interest for intelligent tutoring system ITS development The workshop centred around the following themes modelling the knowledge domain modelling student knowledge design ing didactic interaction and learner control This book contains revised versions of the papers presented at the workshop All of the chapters that follow have been written by participants at the workshop Each formed the basis for a scheduled presentation and discussion Many are suggestive of research directions that will be carried out in the future There are four main issues running through the papers presented in this book knowledge about geometry is not knowledge about the real world and materialization of geometrical objects implies a reification of geometry

which is amplified in the case of its implementation in a computer since objects can be manipulated directly and relations are the results of actions Laborde Schumann This aspect is well exemplified by research projects focusing on the design of geometric microworlds Guin Laborde

**Cognitive Models and Intelligent Environments for Learning Programming** Enrica Lemut, Benedict DuBoulay, Giuliana Dettori, 2013-11-11 At present there is a general consensus on the nature of learning programming but there are different opinions on what forms an effective environment for it It is generally recognized that the development of a mental model is a formidable task for the student and that learning programming is a complex activity that depends heavily on metacognitive skills This book based on a NATO

workshop presents both pure cognitive models and experimental learning environments and discusses what characteristics can make a learning model effective especially in relation to the learning environment natural or computerized The papers cover cognitive models related to different aspects of programming classes of learners and types of environment and are organized in three groups theoretical and empirical studies on understanding programming environments for learning programming and learning programming in school environments Comprehension design construction testing debugging and verification are recognized as interdependent skills which require complicated analysis and may develop independently and indifferent orders in novices This book shows that there is unlikely to be a single path from novice to expert and that the structure of the final product the program may not constrain the process by which it comes into being as much as some would advocate *Research in Education* ,1972 *Social Psychology Matters* Hollway, Wendy, Lucey, Helen, Phoenix, Ann, 2006-12-01 *Social Psychology Matters* explores the significance of social psychology in the twenty first century and the important contribution it can and does make to understanding ourselves and others in today's world This book is designed to help the reader navigate the complex and ever changing nature of the discipline and gain an overview of the key concepts methods and theories The authors adopt a broad approach to trace the roots and legacies of social psychology with a keen eye to the future Each chapter provides an in depth look at a social psychological topic of significance ranging from self and conflict to families and embodiment Four theoretical perspectives cognitive social discursive psychological phenomenological and social psychoanalytic enable students to critically analyse social psychological research These perspectives are interpreted through the interrogative themes of Individual society dualism Agency structure dualism Situated knowledges Power relations This stimulating and accessible text uses real life experience to demonstrate why social psychology matters and how our understanding of these topics can be continually enhanced and constructively applied [Eight Habits of Highly Effective Math Students \(and the Teachers Who Teach Them\)](#) Sue Chapman, Holly Burwell, Mary Mitchell, 2025-03-20 Essential habits to build mathematical confidence and competence for all students It has been said that teachers make approximately 1 500 decisions a day Given the volume of work it is no wonder that these decisions are frequently made reflex like and in the moment By intentionally nurturing effective habits in students as well as in teachers we can make these decisions more deliberately and in so doing foster a positive relationship with mathematics that will set students on an unstoppable trajectory of math learning *Eight Habits of Highly Effective Math Students and the Teachers Who Teach Them* focuses on developing eight essential habits that support mathematical competence and confidence in students This resource is designed as a personalized practice based professional learning experience leading you through a wealth of professional learning and application activities to support you in growing a specific math habit in your classroom to strengthen your students math learning and build your own efficacy The book offers the chance to choose your own adventure through three teacher inquiry options focused on a specific math habit Give it a Go An Informal Exploration of a Teaching Action and Its
