Mathtensor A System For Doing Tensor Analysis By Computer:

MathTensor Leonard Parker, Steven M. Christensen, 1994 Provides a computer program which adds tensor analysis to Mathematica The book includes an introduction to MathTensor's commands and functions information on how to apply MathTensor to specific problems and tips on how to solve problems in electromagnetism and relativity

Foundations of Classical Electrodynamics Friedrich W Hehl, Yuri N. Obukhov, 2012-12-06 In this book we display the fundamental structure underlying classical electrodynamics i.e. the phenomenological theory of electric and magnetic effects The book can be used as a textbook for an advanced course in theoretical electrodynamics for physics and mathematics students and perhaps for some highly motivated electrical engineering students We expect from our readers that they know elementary electrodynamics in the conventional 1+3 dimensional form including Maxwell's equations More over they should be familiar with linear algebra and elementary analysis including vector analysis Some knowledge of differential geometry would help Our approach rests on the metric free integral formulation of the conservation laws of electrodynamics in the tradition of F Kottler 1922 E Cartan 1923 and D van Dantzig 1934 and we stress in particular the axiomatic point of view In this manner we are led to an understanding of why the Maxwell equations have their specific form We hope that our book can be seen in the classical tradition of the book by E J Post 1962 on the Formal Structure of Electromagnetics and of the chapter Charge and Magnetic Flux of the encyclopedia article on classical field theories by C Truesdell and R A Toupin 1960 including R A Toupin's Bressanone lectures 1965 for the exact references see the end of the introduction on page 11

Advanced Classical Electrodynamics: Green Functions, Regularizations, Multipole Decompositions Ulrich D Jentschura, 2017-05-09 This textbook introduces advanced classical electrodynamics using modern mathematical techniques with an emphasis on physical concepts Connections to field theory and general relativity are highlighted while the book still serves as the basis for a one or two semester course on electrodynamics within the graduate curriculum

The Very Basics of Tensors Nils K. Oeijord, 2005 Tensor calculus is a generalization of vector calculus and comes near of being a universal language in physics Physical laws must be independent of any particular coordinate system used in describing them This requirement leads to tensor calculus The only prerequisites for reading this book are a familiarity with calculus including vector calculus and linear algebra and some knowledge of differential equations

Symbolic and Numerical Scientific Computation Franz Winkler, 2003-06-30 This book constitutes the thoroughly refereed post proceedings of the Second International Conference on Symbolic and Numerical Scientific Computation SNSC 2001 held in Hagenberg Austria in September 2001 The 19 revised full papers presented were carefully selected during two rounds of reviewing and improvement The papers are organized in topical sections on symbolics and numerics of differential equations symbolics and numerics in algebra and geometry and applications in physics and engineering

Seventh Marcel Grossmann Meeting, The: On Recent Developments In Theoretical And Experimental General Relativity, Gravitation, And Relativistic Field Theories - Proceedings Of The 7th Marcel

Grossmann Meeting (In 2 Parts) Remo Ruffini, George Mac Keiser, Robert T Jantzen, 1997-03-19 Since 1975 the triennial Marcel Grossmann Meetings have been organized in order to provide opportunities for discussing recent advances in gravitation general relativity and relativistic field theories emphasizing mathematical foundations physical predictions and experimental tests The proceedings of the Seventh Marcel Grossmann Meeting include the invited papers given at the plenary sessions the summaries of the parallel sessions the contributed papers presented at the parallel sessions and the evening public lectures The authors of these papers discuss many of the recent theoretical observational and experimental developments that have significant implications for the fields of physics cosmology and relativistic astrophysics *Relativity and Scientific Computing* Friedrich W Hehl, Roland A. Puntigam, Hanns Ruder, 2012-12-06 For this set of lectures we assumed that the reader has a reasonable background in physics and some knowledge of general relativity the modern theory of gravity in macrophysics and cosmology Computer methods are presented by leading experts in the three main domains in numerics in computer algebra and in visualization The idea was that each of these subdisciplines is introduced by an extended set of main lectures and that each is conceived as being of comparable importance Therefore we believe that the book represents a good introduction into scientific computing for any student who wants to specialize in relativity gravitation and or astrophysics We took great care to select lecturers who teach in a comprehensible way and who are at the same time at the research front of their respective field In numerics we had the privilege of having a lecturer from the National Center for Supercomputing Applications NCSA Champaign IL USA and some from other leading institutions of the world visualization was taught by a visualization expert from Boeing and in computer algebra we took recourse to practitioners of different computer algebra systems as applied to classical general relativity up to quantum gravity and differential geometry **General Relativity and Gravitation 1992, Proceedings of the Thirteenth INT Conference on General Relativity and Gravitation, held at Cordoba, Argentina, 28 June - July 4 1992** R.J. Gleiser, C.N. Kozameh, O.M. Moreschi, 1993-01-01 General Relativity and Gravitation 1992 contains the best of 700 papers presented at the triennial INT conference generally recognized as the key conference in the area The plenary and invited papers are published in full along with summaries of parallel symposia and workshops The list of plenary speakers is as impressive as ever with contributions from Jim Hartle Roger Penrose and Lee Smolin among many others Aspects of Quantum Field Theory in Curved Spacetime Stephen A. Fulling, 1989-08-24 The theory of quantum fields on curved spacetimes has attracted great attention since the discovery by Stephen Hawking of black hole evaporation It remains an important subject for the understanding of such contemporary topics as inflationary cosmology quantum gravity and superstring theory This book provides for mathematicians an introduction to this field of physics in a language and from a viewpoint which such a reader should find congenial Physicists should also gain from reading this book a sound grasp of various aspects of the theory some of which have not been particularly emphasised in the existing review literature The topics covered include normal mode expansions

for a general elliptic operator Fock space the Casimir effect the Klein paradox particle definition and particle creation in expanding universes asymptotic expansion of Green's functions and heat kernels and renormalisation of the stress tensor The style is pedagogic rather than formal some knowledge of general relativity and differential geometry is assumed but the author does supply background material on functional analysis and quantum field theory as required The book arose from a course taught to graduate students and could be used for self study or for advanced courses in relativity and quantum field theory Gravitation and cosmology. Proceedings of the Spanish Relativity Meeting Alberto Lobo, 2003 **Computer**

Algebra in Scientific Computing Vladimir P. Gerdt, Wolfram Koepf, Werner M. Seiler, Evgenii V. Vorozhtsov, 2017-09-07 This book constitutes the proceedings of the 19th International Workshop on Computer Algebra in Scientific Computing CASC 2017 held in Beijing China in September 2017 The 28 full papers presented in this volume were carefully reviewed and selected from 33 submissions They deal with cutting edge research in all major disciplines of Computer Algebra

Classical And Quantum Systems: Foundations And Symmetries - Proceedings Of The 2nd International Wigner Symposium Heinz-dietrich Doebner, F Schroeck Jr, W Scherer, 1993-01-19 The Wigner Symposium series is focussed on fundamental problems and new developments in physics and their experimental theoretical and mathematical aspects Particular emphasis is given to those topics which have developed from the work of Eugene P Wigner The 2nd Wigner symposium is centered around notions of symmetry and geometry the foundations of quantum mechanics quantum optics and particle physics Other fields like dynamical systems neural networks and physics of information are also represented This volume brings together 19 plenary lectures which survey latest developments and more than 130 contributed research reports *Foundations of Fluid Mechanics with Applications* Sergey P. Kiselev, Evgenii V. Vorozhtsov, Vasily M.

Fomin, 1999-12 This book presents the basic concepts of continuum mechanics The material is presented in a tensor invariant form with a large number of problems with solutions The book integrates the use of the computer algebra system Mathematica and contains a large number of programs on the disk that will help clarify the concepts of continuum mechanics

Computational Science — ICCS 2004 Marian Bubak, Geert D. van Albada, Peter M.A. Sloot, Jack Dongarra, 2004-10-11 The International Conference on Computational Science ICCS 2004 held in Krakow Poland June 6-9 2004 was a follow up to the highly successful ICCS 2003 held at two locations in Melbourne Australia and St Petersburg Russia ICCS 2002 in Amsterdam The Netherlands and ICCS 2001 in San Francisco USA As computational science is still evolving in its quest for subjects of investigation and efficient methods ICCS 2004 was devised as a forum for scientists from mathematics and computer science as the basic computing disciplines and application areas interested in advanced computational methods for physics chemistry life sciences engineering arts and humanities as well as computer system vendors and software developers The main objective of this conference was to discuss problems and solutions in all areas to identify new issues to shape future directions of research and to help users apply various advanced computational techniques The event harvested recent
