Interdisciplinary Elementary Physical Education Theresa Purcell Cone, Peter H. Werner, Stephen Leonard Cone, 2009
The popular Interdisciplinary Teaching Through Physical Education is back and better than ever. This new edition guides you in integrating the content of language arts, math, science, social studies, and the arts, music, theater, arts, and visual arts with the content of physical education through active learning experiences. This book has the following features: It provides 24 learning experiences in the five academic areas, 193 additional ideas for developing those learning experiences, and 37 new ongoing strategies for teaching physical education through cross-curricular methods. It is revised and expanded, offering you more teaching tools to supplement, support, and enhance your teaching. It delivers new practical ideas and activities for classroom use based on current theory and best practices. In part I, you will learn about the theoretical need for and benefits of interdisciplinary teaching and learning. The authors identify models for planning and implementing interdisciplinary experiences and provide ideas for getting started building a support network and assessing learning. In part II, the authors describe sample learning experiences in each of the five academic disciplines and offer ideas for developing additional learning experiences. They also present suggested scope and sequence of concepts for each grade level and describe the concepts and skills that are appropriate for primary and intermediate grade students. Interdisciplinary Elementary Physical Education will give your students a wealth of knowledge while they are being active. They will have fun while they conjugate, calculate, investigate, explore, dance, and move across the curriculum.

Experience Scott Lash, 2018-07-04 This book is a radical plea for the centrality of experience in the social and human sciences Lash argues that a large part of the output of the social sciences today is still shaped by assumptions stemming from positivism in contrast to the tradition of interpretative social enquiry pioneered by Max Weber These assumptions are particularly central to economics with its emphasis on homo economicus the utility maximizing actor but they have infiltrated the other social sciences too Lash argues for a social sciences based not in positivism's utilitarian a priori but instead in the a posteriori of grounded and embedded subjective experience His wide ranging account starts from considerations of ancient experience via Aristotle's technics continues through a politics of Hannah Arendt's a posteriori public sphere and concludes with the contemporary with technological experience on the one hand and with Chinese post ontological thought in which the ten thousand things themselves are doing the experiencing on the other This original book
