Sectoral Growth And Change:

Sectoral Growth in Chile, 1962-82 Juan Eduardo Coeymans, Yair Mundlak, 1993 The model Productivity Labor Capital Product prices Simulations of changes in relative prices Simulations of growth *Patterns of change in Malawi's economy under sector-focused investment strategies: Results of scenarios run through 2030 using an economy-wide model for Malawi* Benson, Todd, Hartley, Faaiga, 2020-01-23 Malawi's economic future is dependent upon a transformation of the economy that will involve increased economic productivity overall and considerable movement of labor and capital out of agriculture and into manufacturing and services A dynamic Computable General Equilibrium model of the economy of Malawi was used to better understand the development gains that would be realized by 2030 through significantly increasing separately the productivity of each of the three sectors of the Malawian economy agriculture industry and services The scenarios run in the model involved increasing by 20 percent from current levels the annual growth rate in total factor productivity for each of the three sectors The results show important trade offs in the choice of which sector should receive emphasis in any economic development strategy A services led strategy would result in higher economic growth overall and broadly rising incomes contributing the most to a structural transformation of the Malawi economy However the principal beneficiaries of increased investment to improve productivity in the services sector will be better off households In contrast an agriculture focused strategy would better meet the needs of the poor and their access to food but would result in continued lagging growth for Malawi's economy and many poorer households continuing to be unable to obtain sufficient income to exit their poverty and realize much better lives for themselves and their children The industrial sector currently is much smaller than either the agriculture or services sectors particularly in terms of employment so significant increases in productivity growth in industry results in smaller benefits overall than comparable increases in agriculture or services **Structural Change and**

Industrial Development in the BRICS Wim Naudé, Adam Szirmai, Nobuya Haraguchi, 2015-06-18 This book provides a unique and timely analysis of the role of structural change in the economic development of Brazil Russia India China and South Africa BRICS with a consideration for the role of industry and in particular manufacturing The emergence of BRICS reflects an ongoing change in the international economic order BRICS now account for very substantial part of global GDP global manufactured value added and global manufactured exports The book examines their economic experiences and structural change in BRICS over the past three decades identifying both differences and commonalities and deriving lessons for other industrializing countries Section I contains comparative studies focusing on the commonalities and differences of the experiences of BRICS Section II includes six country studies providing a more detailed analysis of the long run experiences of each of the countries Section III consists of a set of seven thematic studies focusing on specific topics such as global value chains the role of transnational corporations in the food chain the role of foreign versus domestic investment the role of domestic versus foreign demand in economic growth the diffusion of environmental energy technology and the

similarities and the differences in industrial policies pursued in the five countries The book contains a summary chapter that provides an integrated perspective of the various contributions from the point of view of poverty reduction and development It asks whether the patterns of structural change and industrial development that BRICS experienced had an impact on poverty outcomes and if so what where the channels and the consequences Economic Study of Puerto Rico: Sector studies United States. Department of Commerce. Interagency Study Group,1979 **Growth, Inequality, and Poverty in Rural China** Shenggen Fan,Linxu Zhang,Xiaobo Zhang,2002-01-01 Growth inequality and poverty Public capital e investment Conceptual framework and model Data estimation and results Understanding Growth and Poverty Raj Nallari,Breda Griffith,2011 Provides an understanding of economic policies for poverty reduction in developing countries The policy areas include the various roles of government in ensuring the effective operation of a market economy conducting fiscal policy and influencing the money supply exchange rates and the financial sector *Financial Liberalization, Structural Change, and Real Exchange Rate Appreciations* Carlos Urrutia,Felipe Meza,2010-03-01 We account for the appreciation of the real exchange rate in Mexico between 1988 and 2002 using a two sector dynamic general equilibrium model of a small open economy with two driving forces i differential productivity growth across sectors and ii a decline in the cost of borrowing in foreign markets These two mechanisms account for 60 percent of the decline in the relative price of tradable goods and explain a large fraction of the reallocation of labor across sectors We do not find a significant role for migration remittances foreign reserves accumulation government spending terms of trade or import tariffs **Globalisation and Poverty** Maurizio Bussolo,Jeffery I Round,2006-03-29 The consequences of globalization for the world s poor are uncertain and fierce rhetoric is dividing its supporters and detractors The channels of effect of essentially macroeconomic shocks on the microeconomic position of individuals and households in poor countries are many and various This book addresses three core issues 1 what are the main channels of effect 2 what are the lessons to be learned from policy measures to alleviate negative poverty consequences and 3 do the proposed analytical approaches assist in providing a monitoring capability This volume assesses the more easily quantifiable effects resulting from price and quantity responses in the goods and labour markets It includes studies of Colombia Ghana India Nepal Bangladesh and Vietnam It uses key analytical approaches most of which are based on numerical simulation methods employing models with different levels of complexity These models capture the features of an economy how it functions and how it might respond to globalization shocks The most important collective contribution of the authors is their establishment of directions and magnitudes of effect based on empirical evidence **Productivity Growth in the Manufacturing Sector** Mihir Kumar Pal,2021-06-03 The growth of manufacturing industries is one of the key sectors in helping to mitigate global recessions Productivity Growth in the Manufacturing Sector thoroughly discusses issues and potential remedies of this sector for a range of international countries **Employment and Structural Change in Indian Industries** Asian Regional Team for Employment Promotion,1989

South-South Globalization S. Mansoob Murshed, Pedro Goulart, Leandro Serino, 2011-06-16 Two prominent features of the current global economy are the world wide recession brought about by the recent financial crisis and the emergence of major economic powers from within the developing world such as Brazil China and India The former represents the failure of global regulatory policies and macroeconomic imbalances between surplus and deficit countries the latter is symptomatic of a partial shift in economic power towards developing nations who are often collectively labelled the global South The macroeconomic imbalances are unsustainable in the longer run as they mean greater absorption relative to income in deficit nations they require corrective action and international policy coordination Reducing imbalances also requires large developing countries to raise their domestic consumption and also imports from the rest of the world and international financial institutions to operate as a lender of last resort Furthermore the engines of global growth especially for developing countries may no longer lie solely in the traditional developed country markets in the USA Europe and Japan known collectively as the global North Rather South South trade is growing rapidly and that could be an engine of growth for the global economy including both developed and developing countries The various chapters in this edited volume address issues surrounding global imbalances and the prospects for growth in developing countries propelled by South South interaction This book should be of interest to students and researchers focussing on political economics international economics globalization global imbalance and the world wide recession after 2008
