Network and System Security Pramod Pandya,2013-08-26 With an ever increasing amount of information being transmitted electronically it is important that security be considered in every phase of local area network design and maintenance Although much emphasis has been placed on such things as wireless networks and remote access it is imperative that the core local area network not be overlooked Because the wired local area network is the nervous system of an organization s Information Systems great care must be taken to properly secure it This chapter begins by looking at the implications for the wired local area network infrastructure security Next local area network segmentation and traffic isolation will be discussed By using segmentation and isolation there is the increased opportunity for security

boundaries Another concept that will be discussed is the security of the local area network equipment The local area network is only functional if the core equipment is operational so securing equipment is an important part of any security strategy To conclude restriction of local area network access will be investigated and an organizational approach will be discussed Because more and more users need access to local area network resources there must be a way to identify and restrict who is allowed on the network and what access they are granted In wired local area network infrastructure security organizations must remember they are only as secure as their weakest point By carefully considering the various aspects of the local area network security during design these weak points can be reduced and the overall security of the network increased Although it is impossible to be 100% secure and still be functional by using some general guidelines to secure the wired local area network many threats to the network can be reduced if not eliminated
