Sedimentary modeling Evan K. Franseen,1991 *Geologic Modeling and Simulation* Daniel F. Merriam,John C. Davis,2012-12-06 Modeling and simulation were introduced to the earth sciences about four decades ago Modeling has proven its worth and now it is an accepted procedure for analyzing and solving geological problems The papers in this collection are focused on modeling sediment deposition and sedimentary sequences and have a decidedly practical flavor Some of the leading simulation packages such as CORRELATOR SEDFLUX SEDpak SEDSIM STRATA and STRATSIM are applied to problems in hydrocarbon exploration oil production groundwater development coal bed appraisal geothermics and environmental diagnosis All of these subjects fall under the broad heading of sedimentary basin analysis The fifteen papers in this volume are written by internationally recognized experts from academia and industry The contributions represent the status of geologic modeling and simulation at the start of the 21st century and will give the reader an insight into current research problems and their possible solutions **Computerized Modeling of Sedimentary Systems** Jan Harff,Wolfram Lemke,Karl Stattegger,2013-03-14 Computerized modeling is a powerful tool to describe the complex interrelations between measured data and the dynamics of sedimentary systems Complex interaction of environmental factors with natural variations and increasing anthropogenic intervention is reflected in the sedimentary record at varying scales The understanding of these processes gives way to the reconstruction of the past and is a key to the prediction of future trends Especially in cases where observations are limited and or expensive computer simulations may substitute for the lack of data State of the art research work requires a thorough knowledge of processes at the interfaces between atmosphere hydrosphere biosphere and lithosphere and is therefore an interdisciplinary approach *Microfacies of Carbonate Rocks* Erik Flügel,2013-11-11 This unparelled reference synthesizes the methods used in microfacies analysis and details the potential of microfacies in evaluating depositional environments and diagenetic history and in particular the application of microfacies data in the study of carbonate hydrocarbon reservoirs and the provenance of archaeological materials Nearly 230 instructive plates 30 in color showing thin section photographs with detailed explanations form a central part of the content Helpful teaching learning aids include detailed captions for hundreds of microphotographs boxed summaries of technical terms many case studies guidelines for the determination and evaluation of microfacies criteria for enclosed CD with 14000 references self testing exercises for recognition and characterization skills and more *Sedimentology* James L. Best,C. R. Fielding,Ian Jarvis,Peter Mozley,2009-05-11 Sedimentology has seen many significant advances and changes over the past 40 years ranging from facies modelling to sequence stratigraphy chemostratigraphy to basin analysis and the integration of studies of physical chemical and increasingly biological processes in the interpretation and prediction of sedimentary environments and products The subject is becoming ever more interdisciplinary and applied and now has far more links to other physical sciences Research and debate are continuing afresh as we move into this new interdisciplinary phase and

promise many developments and increased uses of our subject Now seemed a good time to publish a series of review papers concerning some key current areas of research We hope that these papers will provide comprehensive starting points for those wishing to become acquainted with an area act as stimuli for debate and provide awareness and ideas for future research avenues No issue of this sort can of course ever be truly comprehensive in its coverage these reviews concern only selected snippets from the wide scope of sedimentology and each has of necessity been selective in its own area

Geologic Modeling and Mapping Andrea Förster, Daniel F. Merriam, 2013-11-11 This volume is a compendium of papers on the subject as noted in the book title of modeling and mapping They were presented at the 25th Anniversary meeting of the International Association for Mathematical Geology IAMG at Praha Prague Czech Republic in October of 1993 The Association founded at the International Geological Congress IGC in Prague in 1968 returned to its origins for its Silver Anniversary celebration All in all 146 papers by 276 authors were offered for the 165 attendees at the 3 day meeting convened in the Hotel Krystal It was a time for remembrance and for future prognostication The selected papers in Geologic Modeling and Mapping comprise a broad range of powerful techniques used nowadays in the earth sciences Modeling stands for reconstruction of geological features such as subsurface structure in space and time as well as for simulation of geological processes both providing scenarios of geologic events and how these events might have occurred Mapping stands for spatial analysis of data a topic that always has been an extremely important part of the earth sciences Because both modeling and mapping are used widely in conjunction the book title should reflect the close relation of the subjects rather than a division Here we bring together a collection of papers that hopefully contribute to the growing amount of knowledge on these techniques

Carbonate Depositional Systems: Assessing Dimensions and Controlling Parameters Hildegard

Westphal, Bernhard Riegl, Gregor P. Eberli, 2010-08-05 Carbonate sediments are of increasing relevance for archives of past environmental conditions and for economical reasons in areas of geothermal energy and hydrocarbon reservoirs Complex interaction of physical and chemical parameters with biological parameters determines the architecture and composition of carbonate sedimentary bodies This book closes some of the still existing gaps in our understanding of the influence and interplay of physical chemical and biological parameters with carbonate sedimentation An understanding of this interaction is not only required for reliable prediction of reservoir quality but also for a robust interpretation of environmental conditions in the past and the present It is written by geologists for geologists in order to provide an easily accessible overview of the large amount of relevant information provided by the neighbouring sciences The approach of the book is to document the modern depositional environments of three classical areas of carbonate deposition each characteristic for a specific sedimentological setting isolated platform attached shelf ramp in order to assess both the range of physical biological and chemical parameters and their sedimentary response This book presents a comprehensive compilation based on data from published work and unpublished theses and the integration of these data in order to extract previously undiscovered relationships between the discussed parameters and carbonate deposition

Soft Computing and Intelligent Data Analysis in Oil Exploration M. Nikraves, L.A. Zadeh, Fred Aminzadeh, 2003-04-22 This comprehensive book highlights soft computing and geostatistics applications in hydrocarbon exploration and production combining practical and theoretical aspects It spans a wide spectrum of applications in the oil industry crossing many discipline boundaries such as geophysics geology petrophysics and reservoir engineering It is complemented by several tutorial chapters on fuzzy logic neural networks and genetic algorithms and geostatistics to introduce these concepts to the uninitiated The application areas include prediction of reservoir properties porosity sand thickness lithology fluid seismic processing seismic and bio stratigraphy time lapse seismic and core analysis There is a good balance between introducing soft computing and geostatistics methodologies that are not routinely used in the petroleum industry and various applications areas The book can be used by many practitioners such as processing geophysicists seismic interpreters geologists reservoir engineers petrophysicist geostatisticians asset managers and technology application professionals It will also be of interest to academics to assess the importance of and contribute to R D efforts in relevant areas

La Pointe, 2012-12-06 In this unique volume renowned experts discuss the applications of fractals in petroleum research offering an excellent introduction to the subject Contributions cover a broad spectrum of applications from petroleum exploration to production Papers also illustrate how fractal geometry can quantify the spatial heterogeneity of different aspects of geology and how this information can be used to improve exploration and production results

Active Continental Margins — Present and Past Geologische Vereinigung, 2013-12-01 **Computerized Basin Analysis** Jan Harff, Daniel F. Merriam, 2012-12-06 This symposium on Computerized Basin Analysis for Prognosis of Energy

and Mineral Resources was organized by Dr Jan Harff chairman of the Scientific Committee for the meeting in Giistrow in what was then East Germany. Sponsors of this meeting were the International Union of Geological Sciences Commission on Storage Automatic Processing and Retrieval of Geologic Data COGEO DATA Academy of Sciences of the German Democratic Republic GDR National Oil and Gas Trust of the GDR and the International Association for Mathematical Geology IAMG. Main topics of the symposium held from 19-22 June 1990 were application of computer methods to the exploration and exploitation of oil and gas coal and other energy and mineral resources. There were computer demonstrations as well as a one day field trip to the geothermic heating plant in Waren. The Regional Group for Eastern Europe of COGEO DATA also met during the conference. Fifty one papers were presented including eight poster sessions by authors from 14 countries. As was to be expected there was a large percentage of papers from the East Bloc of European countries especially the GDR USSR and the CSSR with a fair representation from the FRG and USA and a smattering from the nine others. Most of the papers were application oriented and related to the mineral industries. There was ample time for exchange of ideas and dissemination of material.

Carbonate Sequence Stratigraphy Robert G. Loucks, J. Frederick Sarg, 1983-04-15 Hardcover plus Foldouts

Sequence Stratigraphy and Depositional Response to Eustatic, Tectonic and Climatic Forcing B.U. Haq, 2013-03-09

Sequence stratigraphy has advanced considerably since the early applications of the concepts on seismic data. It attempts to discern the migration of facies resulting from changes in a combination of factors such as sea level tectonics climate and sediment flux and integrates it with a meaningful chronostratigraphy. The stratigraphic record is envisioned as a framework of repetitive packages of genetically related strata formed in response to the shifting base level in which the locus of deposition of various sediment types may be anticipated. This attribute is rapidly promoting sequence stratigraphy as an indispensable tool for prediction of facies in exploration and production geology. In hydrocarbon exploration the application of sequence stratigraphy has ranged from anticipating reservoir and source rock distribution to predicting carbonate diagenesis porosity and permeability. The capability to anticipate vertical and lateral distribution of facies and reservoir sands in the basinal shoreface incised valley fill and regressive settings alone has been a great asset for exploration. In frontier areas where data are often limited to seismic lines sequence stratigraphic methodology has helped determine the timing and of types of unconformities and anticipate transgressive and regressive prone intervals. In production it is aiding in field development by providing improved source and seal predictions for secondary oil recovery. A recognition of stratigraphic causes of poor recovery through improved understanding of internal stratal architecture can lead to new well recompletions and enhanced exploitation in existing fields. The sequence stratigraphic discipline is in a state of rapid expansion.
