Capacity and Sedimentation of Loch Lomond Reservoir, Santa Cruz County, California Ronald P. Fogelman, Karen L. Johnson, 1985

Sediment-transport Characteristics of Cane Creek, Lauderdale County, Tennessee William P. Carey, 1993

Sediment Response to Large-scale Environmental Change Richard P. R. Pannell, 1999 Knowledge about sediment yields is important in developing management strategies for fluvial systems The effect of sediment must be considered in the design of river structures and in determining water quality for biotic systems Changes in sediment transport regimes are difficult to understand or predict due to the complexity of factors that influence sediment flux in fluvial systems Relationships about sediment source sinks and transport have long been studied and many of these relationships have been quantitatively and qualitatively defined However due to the scarcity of long term sediment records it is often difficult to test these relationships This study examines one of these long term suspended sediment records for the Mississippi River at East Dubuque Illinois from 1943 to 1996 Daily suspended sediment concentrations from the United States Army Corps of Engineers station at East Dubuque were analyzed for the spring and summer months March August Sediment concentrations were analyzed in terms of average concentration during different hydrologic events at the large basin scale These events included the spring snowmelt runoff low and high magnitude and different intensity storm runoff low moderate and high Additionally peak sediment concentrations during storm runoff were also analyzed The general trend for all of these analyses suggests a significant decrease in sediment concentrations from the 1940s to the 1990s The strongest trends are found in high magnitude snowmelt runoff and in high and moderate magnitude storm runoff Peak concentrations in storm runoff have decreased from about 1000 ppm in the 1940s to about 200 ppm in the 1990s Average concentrations have likewise decreased from about 200 ppm in the 1940s to 100 ppm in the 1990s Changes in land management practices are identified as being the primary environmental factor influencing sediment concentrations

Sediment Discharge in Muddy Creek and the Effect of Sedimentation Rate on the Proposed Woford Mountain Reservoir Near Kremmling, Colorado Barbara C. Ruddy, 1987

River Mechanics Pierre Y. Julien, 2002-08-19 This textbook offers a thorough analysis of rivers from upland areas to oceans It scrutinizes select methods underlining both theory and engineering applications emphasizing the mechanics of

flood wave propagation and sediment transport in rivers The text covers fundamental principles engineering analysis and engineering design with problems examples and case studies throughout Channel stability and river dynamics are examined in terms of river morphology lateral migration aggradation and degradation Detailed treatments of riverbank stabilization and engineering methods are provided while separate chapters cover physical and mathematical models This essential text presents both the theory and design of measures to reduce flood impact and bank erosion to improve navigation and to increase water supply to cities and irrigation canals Over 100 exercises and nearly twenty case studies make this book an invaluable learning tool for students and researchers and practitioners will find it a concise resource on the mechanics of rivers
