Seeds Carol C. Baskin,Jerry M. Baskin,2000-12-05 Seeds Ecology Biogeography and Evolution of Dormancy and Germination differs from all other books on seed germination It is an all encompassing volume that provides a working hypothesis of the ecological and environmental conditions under which various kinds of seed dormancy have developed It also presents information on the seed germination of more than 3500 species of trees shrubs vines and herbaceous species making this a valuable reference for anyone studying germination This book delivers information on characteristics of each type of seed dormancy how each type of dormancy is broken in nature and what environmental conditions are required for germination after dormancy is broken It explains how studies should be done to distinguish persistent from transient seed banks and covers which species should be controlled propagated and conserved Seeds gives the reader insight and guidelines for doing ecologically meaningful studies on the biogeography and evolution of seed dormancy and germination in order to better understand plant reproductive strategies life history traits adaptations to habitats and physiological processes Evolutionary phylogenetic origins and relationships of various kinds of seed dormancy A world biogeographical perspective on seed dormancy and germination Ecophysiology of seeds with each type of dormancy Critical evaluation of methodology

The Ecology of Seeds Michael Fenner, Ken Thompson, 2005-02-24 What determines the number and size of the seeds produced by a plant How often should it reproduce them How often should a plant produce them Why and how are seeds dispersed and what are the implications for the diversity and composition of vegetation These are just some of the questions tackled in this wide ranging review of the role of seeds in the ecology of plants The authors bring together information on the ecological aspects of seed biology starting with a consideration of reproductive strategies in seed plants and progressing through the life cycle covering seed maturation dispersal storage in the soil dormancy germination seedling establishment and regeneration in the field The text encompasses a wide range of concepts of general relevance to plant ecology reflecting the central role that the study of seed ecology has played in elucidating many fundamental aspects of plant community function
