Seed Proteins:

Seed Proteins Peter R. Shewry, R. Casey, 2012-12-06 Seeds provide more than half of the world's intake of dietary protein and energy and thus are of immense economic, cultural and nutritional importance. Proteins can account for up to 40% of the dry weight of various types of seeds, thereby making a large contribution to the nutritional quality and processing properties of seeds. It is therefore not surprising that seed proteins were among the first plant components to be systematically studied some 250 years ago and have been a major focus of research over the past 100 years. The properties and behaviour of seed proteins pervade modern life in numerous ways. For example, legume and cereal proteins are used in the production of a wide range of meat-free foods; the process of bread making is dependent on the physical-chemical properties of wheat seed proteins and in developed as well as developing countries, nutritional deficiencies among vegetarian diets are avoided through balancing legume and cereal seeds as sources of dietary proteins. Understanding seed proteins in order to improve their composition and properties and to increase their concentrations will thus continue to be an important research objective for the future. The present volume represents the culmination of a long-discussed plan of the editors to bring together the best international authorities in order to compile a definitive monograph on biological, biochemical, molecular and genetic aspects of seed proteins.

Seed Proteins W. Gottschalk, H.P. Müller, 2012-12-06 Investigations on seed proteins have been intensively carried out during the past two decades. This is valid with regard to both their chemical composition as well as their nutritive value. The development of new biochemical and physical methods has resulted in obtaining deep insights into the structures of seed proteins and their mutual interactions. Intensive exchange of information between the scientists participating in national and international research programmes has given strong impulses for intensifying the research in this field. For the quantitative and qualitative investigations of seed proteins, not only some model plants were used; on the contrary, they were carried out on a large number of different crops important for different regions of the earth. In this way, a level of knowledge has been reached which could not be expected in this diversity within such a short period. This holds not only true for biochemical but also for physiological characters of the species of the limiting amino acids studied. With regard to nutritional aspects, the problem was of special interest, but also seed proteins acting as antinutritional factors were analysed in detail. Based on the knowledge of seed protein structures, it was possible to perform investigations on the genetic basis of their synthesis. This was done under two different aspects. The basic knowledge on the genes involved should be widened; moreover, it should be tried to improve the seed proteins quantitatively and qualitatively under the influence of mutant genes.

Grain and Seed Proteins Functionality Jose Carlos Jimenez-Lopez, 2021-06-30 Climate resilience and growing population are the two main global challenges that encourage the development of an affordable and sustainable source of vegetable protein to ensure future food security. Advanced scientific programs and agro-food developments should be prioritarily on demand to face different stresses in order to maintain yield and quality of seed production. In this regard,

legume crops are key sustainable alternatives for healthier diets while contributing to appropriate natural resource management Taken together the 11 chapters in this book represent a generous addition to the progress in our understanding of climate resilient legumes hoping to contribute to the improvement of global food security in the future Grouping of Legumes According to Biological Reactions of Their Seed Proteins Ira Lawrence Baldwin, Edwin Broun Fred, Edwin George Hastings, 1927 Plant Protein Engineering P.
