Seeing Without Glasses Improving Your Vision Naturally:

Seeing Without Glasses (EasyRead Edition) , **Seeing Without Glasses** Roberto Kaplan,2011-06-21 It is as easy to develop vision fitness as it is to tone and strengthen other parts of the body You can improve your vision through unique exercises proper diet and even by modifying your thought patterns according to Dr Robert Michael Kaplan author of Seeing Without Glasses and an international authority in vision training Over 100 million Americans are nearsighted and at least six out of ten depend on glasses or contacts to correct their vision Even those with healthy eyesight experience eyestrain from vision stress Improve Your Eyesight Naturally Leo Angart,2012-04-27 Leo Angart is a business consultant author and trainer Having worn glasses for more than 25 years he speaks from personal experience It has now been more than 19 years since he threw away his glasses The Bates Method - Perfect Sight Without Glasses William H. Bates,Emily A. Bates,2017-06-29 See our YouTube Channel for VIDEOS of the book with color pictures animations video in video Natural Eyesight Improvement training by Bates Method author teacher Clark Night https://www.youtube.com/watch?v=GhEy4Ys_pKU This book is the Google Play text version of Perfect Sight Without Glasses Contains only Ophthalmologist Bates book Better Eyesight Magazine extra training pictures to learn the method quickly and eyecharts Dr W H Bates started his career as an orthodox ophthalmologist following the old long time rules of the practice prescribing eyeglasses During his practice working with different patients eye conditions he realized that unclear close distant vision astigmatism and other conditions often cured itself reversed back to clear vision especially when his patients stopped wearing their eyeglasses and relaxed He noticed that wearing glasses tensed the eyes eye muscles lowered the vision and resulted in stronger and stronger eyeglass lens prescriptions being needed in order to see clear through the glasses He began his own studies on the eye and its function This led him to discover that many of the old ophthalmology optometry supposed facts about the eye lens and its function and cause of unclear vision are incorrect Dr Bates began teaching his patients to stop wearing their glasses He taught them natural methods including relaxation correct use of the eyes vision shifting to produce clear vision Dr Bates cured his own eyesight close vision presbyopia Distant vision also clear He wrote an article in his book magazine describing how he did it with Memory Imagination Relaxation He controlled changed the focus of light rays in his eyes with his mind Dr Bates performed experiments on the eyes of animals and observed the function of animal patient s eyes under different conditions He used the retinoscope to see the refraction of light rays in the eye under various conditions He proved that the refraction clarity of vision changes often And when the eyes are left alone eyeglasses avoided the refraction clarity returns to normal clear vision He proved that the state of the mind thoughts emotions body change the refraction of the eye clarity of vision Example when the mind body is relaxed positive happy thoughts emotions the refraction is normal and vision is clear When the mind body is under stress strain the refraction is abnormal and vision is unclear Dr Bates discovered that the main cause of unclear vision and other eye problems is Wearing Eyeglasses Mental Strain Mental Visual Effort to See Poor Vision

Habits incorrect use of the eyes vision squinting staring not shifting lack of normal relaxed eye movements lack of central fixation poor memory and imagination Perfect Sight occurs with Perfect Relaxation deep or active dynamic relaxation Relaxation occurs first and then the eyesight becomes clear Practicing normal relaxed eye vision function induces relaxation of the mind eyes and perfect clarity Dr Bates experiments on the outer eye muscles proved that tension in these muscles mainly caused by eyeglasses strain in the mind incorrect vision habits disrupts their function the eyes movement accommodation convergence unaccommodation divergence causes pressure tension pulling on in the eye alters the eyes shape and lens retina disrupts refraction focus of light rays in the eye on the retina and the clarity of vision When the mind is strained tense the brain and retina do not communicate function together at optimum level Function of the retina is lowered Relaxing the mind returning normal eye movement relaxes the outer inner eye muscles returns the eyes lens retina to normal shape with clear vision Website <https://cleareyesight.com/batesmethod/info> <https://cleareyesight.com/batesmethod/info>

Helmholtz Theory is the accepted belief of most modern eyeglass doctors Dr Bates a natural eye specialist felt that the two oblique eye muscles performed eye accommodation by compressing the round eyeball in the middle and making it longer horizontally Dr Bates cut these muscles in rabbits and found the eyes could not accommodate When he injected a drug to paralyze the oblique muscles the eyes failed to accommodate When he put together the severed muscles and washed out the drug the rabbit s eyes were able to accommodate again The Helmholtz theory holds that accommodation is due to the expansion and contraction of the crystalline lens caused by the action of the ciliary muscle Dr Bates through his experiments discovered and proved that it is not the crystalline lens but the six external muscles that act upon the eyeball and give the eye its ability to adjust and accommodate to near and far objects The fact that patients who have had the crystalline lens removed are still able to see and have the power to accommodate should be convincing proof of this theory It is obvious both the oblique muscles and the ciliary muscles work in conjunction when focusing Here is the reason why the normal eye when looking at a distant object becomes shortened and when looking at a close object is elongated The external muscles oblique recti iris and the ciliary muscles all enable the eyes to accommodate properly The external muscles lengthen and shorten the eyeball to enable light rays to fall upon the macula The iris adjusts the pupil for the amount of light necessary to see clearly And the ciliary muscle contracts the lens to focus upon the object The ciliary muscle changes the lens and directs the rays of light to focus upon the macula or center of sight While looking at a distant object of more than twenty feet away the rays come into the eyes parallel When looking at a close point rays come into the eyes at an angle The normal eye must accommodate these rays in order to see clearly a close or distant point All rays fro
