Seis Arquitectos Six Architects:

Six Architects Seis Arquitectos, 2002 In this extraordinary book we see the work of six Guatemalan architects six creative voices who in an individual or collective form have redefined and given a poetic spatial quality to the contemporary architecture of their country Members of the firm known quite simply as Seis Arquitectos Peter Giesemann Carlos M Lara Raul Minondo Ernesto Porras Rodolfo Solares Rafael Tinoco they are exponents of a style with a minimalist touch and a strong commitment to the value of the abstract the geometrically pure and the spatially rich Without falling into a reductionist posture their design proposals seek a primal purity based on ideas which emphasize that form and space shape and adjust themselves to function without superficial ornamentation nor the utilization of rigid axes nor the imposition of classical orders Guided by a romantic minimalism they give a frank expression to the structure that delineates the different ambits they create giving priority to the light that defines the simple and austere forms of their architecture A passion for light and natural beauty drives them to establish a dialogue between the exterior and interior spaces causing architecture and nature to interact and create areas that are strongly illuminated by direct light or by means of great panes of glass The designs shown here cover a range of expressions from serious and formal buildings for banks offices and stores to private homes and housing developments in which rural and urban living interact The architecture of Seis Arquitectos is an architecture that respects and fits into its particular context recognizing the value of place as the receptacle of cultural traits that complement the configuration of the constructed space In this environment of contemporary art these talented architects have succeeded in expressing themselves conceptually seeking inspiration at times in their nation's Mayan roots at times through volumes with a symbolic value In both cases they have created a sublime architecture that leads us to undertake a silent reflection

decadent nemesis of the Enlightenment when the two had fundamental characteristics in common This book seeks to answer these questions by treating Rococo as a global phenomenon for the first time and by exploring its moral and spiritual dimensions through the lens of populist French religious literature of the day a body of work the author calls the Spiritual Rococo and which has never been applied directly to the arts The book traces Rococo s development from France through Central Europe Portugal Brazil and South America by following a chain of interlocking case studies whether artistic literary or ideological and it also considers the parallel diffusion of the literature of the Spiritual Rococo in these same regions placing particular emphasis on unpublished primary sources such as inventories One of the ultimate goals of this study is to move beyond the cliché of Rococo s frivolity and acknowledge its essential modernity Thoroughly interdisciplinary The Spiritual Rococo not only integrates different art historical fields in novel ways but also interacts with church and social history literary and post colonial studies and anthropology opening up new horizons in these fields

Chilean Modern Architecture Since 1950 Fernando Pérez Oyarzún, Rodrigo Pérez de Arce, Horacio Torrent, 2010 Chilean architecture along with that of São Paulo and Mexico City sets a benchmark for the intersection of modernism with vernacular influences in Latin America Culture landscape and the geology of this earthquake prone region have all served as important filters for the practice of post 1950s design in Chile This volume introduces the modern architecture of Chile to readers in the United States Looking primarily at domestic architecture as a lens for studying the larger movement Fernando

Perez Oyarzun considers the relationship between theory and practice in Chile As he shows in his chapter during the early 1950s the School of Valparaiso offered the possibility of developing experimental projects accompanied by theoretical statements There visual artists considered poetry the starting point of modern architecture and contributed their radically modern views to the design process of the project Next Rodrigo Perez de Arce examines the material context of architecture in Chile the availability of materials and technologies the frequency of violent earthquakes and related seismic activity and the nation s craft based labor intensive building practices He applies these considerations to a series of case studies to demonstrate how they interact with cultural historical economic and even political influences In the book s final chapter Horacio Torrent reviews the interplay between the architectonic culture and modern shapes that came into sharp focus in the 1950s in Chile In another series of case studies he highlights the formation of a system of concepts thought processes instruments and values that have given Chilean architecture a certain singularity during the last fifty years
