Low N Slow:

Fuzzy Systems Engineering Nadia Nedjah, Luiza de Macedo Mourelle, 2005-05-20 This book is devoted to reporting innovative and significant progress in fuzzy system engineering. Given the maturation of fuzzy logic, this book is dedicated to exploring the recent breakthroughs in fuzziness and soft computing in favour of intelligent system engineering. This monograph presents novel developments of the fuzzy theory as well as interesting applications of the fuzzy logic exploiting the theory to engineer intelligent systems.

Somali Piracy Jade Lindley, 2016-06-23 Maritime piracy off the coast of Somalia was first recognised as a global concern in 2008 after the hijackings of World Food Programme vessels. It remains a serious impediment to international maritime trade and a significant risk to seafarers. Bringing a criminological perspective to the subject, this book presents an analysis of Somali piracy by means of Routine Activity Theory and regulatory pluralism. Based on data from a range of sources including published documents and in-depth interviews with representatives of industry, government and international organisations, the study concludes that no one institution or policy will suffice to control Somali piracy. Accordingly, a number of different actors and institutions have a role to play in reducing the supply of motivated offenders, the vulnerability of prospective victims and in enhancing guardianship. The book envisages a holistic counter piracy program based on a pluralistic regulatory model that is sustainable within the region and managed by the region, providing the best opportunity for both the immediate future and for long term success. This study will be essential reading for criminologists, public policy and legal scholars as well as policy makers and regulators in countries affected by and dealing with piracy and international professional advocacy groups operating in the maritime space.

Rare Diseases Research and Diagnosis in Low- and Middle-Income Countries Claudia Gonzaga-Jauregui, Vajira Dissanayake, Ferran Casals, Aradhana Dwivedi, Kawmadi Gunawardena, 2025-09-23 Rare diseases (RDs) encompass more than 7000 described disorders characterized by a low prevalence in the general population. Collectively, these disorders affect between 6 to 8% of the world population that is approximately 300-350 million people worldwide. The majority of RDs involve an underlying genetic component and more than 6000 conditions have been linked to a known molecular cause. In the last 13 years, the adoption of human genomic sequencing has enabled the more efficient and accurate diagnosis and research of rare genetic disorders. Genomic sequencing has become a first-tier diagnostic test for many patients with congenital syndromes and suspected genetic disorders in high-income countries as well as an effective method for the study of undiagnosed and novel genetic disorders in the research arena. The implementation of genomic sequencing has dramatically changed the diagnosis and research of rare diseases in high-income countries. In contrast, the reality in low and middle-income countries (LMICs) is strikingly different where disparities in accessibility to these technologies exist. The high cost of genomic sequencing and other molecular technologies remains a limiting factor in the common implementation of these methods for diagnosis and research of rare diseases in resource-limited settings. The study of rare genetic diseases in LMICs may be underestimated.

when compared to large scale genomic studies performed in developed countries despite being performed under much strained circumstances. Consequently, research publications on the genetics of RDs within LMICs might be underrepresented in the literature, limiting the understanding of genetic and phenotypic variability across populations and contributing to the lack of representation of non-European individuals in genetic studies. This Research Topic aims to provide an opportunity for researchers and clinicians from LMICs who are dedicated to the study of rare genetic disorders to share their findings with the global genetics scientific community as well as their challenges and perspectives on the implementation of modern technologies and approaches for the diagnosis and study of rare genetic disorders.

HORNE (John), 1840 **Plant Physiological Ecology** Hans Lambers, F. Stuart Chapin III, Thijs L. Pons, 2013-04-17

The individual is engaged in a struggle for existence Darwin That struggle may be of two kinds The acquisition of the resources needed for establishment and growth from a sometimes hostile and meager environment and the struggle with competing neighbors of the same or different species In some ways we can define physiology and ecology in terms of these two kinds of struggles Plant ecology or plant sociology is centered on the relationships and interactions of species within communities and the way in which populations of a species are adapted to a characteristic range of environments Plant physiology is mostly concerned with the individual and its struggle with its environment At the outset of this book the authors give their definition of ecophysiology arriving at the conclusion that it is a point of view about physiology A point of view that is informed perhaps by knowledge of the real world outside the laboratory window A world in which shall we say the light intensity is much greater than the 2×10^{20} to 5×10^{21} photons $m^{-2} s^{-1}$ used in too many environment chambers and one in which a constant 20 °C day and night is a great rarity The standard conditions used in the laboratory are usually regarded as treatments Of course there is nothing wrong with this in principle one always needs a baseline when making comparisons The idea however that the laboratory control is the norm is false and can lead to misunderstanding and poor predictions of behavior
