Massachusetts A Picture Memory:

Massachusetts Outlet, Colour Library Books, 1991-08-20 **Flashbulb Memories** Martin Conway, 2013-06-20 This book provides a state of the art review and critical evaluation of research into flashbulb memories The opening chapters explore the encoding view of flashbulb memory formation and critically appraise a number of lines of research that have opposed this view It is concluded that this research does not provide convincing evidence for the rejection of the encoding view Subsequent chapters review and appraise more recent work which has generally found in favour of the flashbulb concept But this research too does not provide unequivocal support for the encoding view of flashbulb memory formation Evidence from clinical studies of flashbulb memories particularly in post traumatic stress disorder and related emotional disturbances is then considered The clinical studies provide the most striking evidence of flashbulb memories and strongly suggest that these arise in response to intense affective experiences Neurobiological models of memory formation are briefly reviewed and one view suggesting that there may be multiple routes to memory formation is explored in detail From this research it seems possible that there could be a specific route for the formation of detailed and durable memories associated with emotional experiences In the final chapter a cognitive account of flashbulb memories is outlined This account is centred on recent plan based theories of emotion and proposes that flashbulb memories arise in responses to disruptions of personal and cultural plans This chapter also considers the wider functions of flashbulb memories and their potential role in the formation of generational identity **A Second Survey of Domestic Electronic Digital Computing Systems** Martin H. Cognitive and Neuropsychological Approaches to Mental Imagery M. Denis, Johannes Engelkamp, John T.E. Richardson, 2012-12-06 The locus of concreteness effects in memory for verbal materials has been described here in terms of the processing of shared and distinctive information This theoretical view is consistent with a variety of findings previously taken as support for dual coding insofar as both verbal and perceptual information may be involved in comprehending high imagery sentences and in learning lists of concrete words But going beyond previous accounts of imagery this view also can provide explanations for several findings that appear contradictory to the thesis that concrete and abstract materials differ in the form of their storage in long term memory Although this does not rule out a role for imagery in list learning or text comprehension it is clear that the complex processes involved in

comprehension and memory for language go beyond mechanisms supplied by a theory based on the availability of modality specific mental representations The task now is to determine the viability of the theory in other domains Several domains of imagery research presented at EWIC provided fertile ground for evaluating my theoretical viewpoint Although not all provide a basis for distinguishing representational theories of imagery from the imagery as process view there are data in several areas that are more consistent with the latter than the former In other cases there are at least potential sources of evidence that would allow such a distinction

Stretching the Imagination Cesare Cornoldi, Robert H. Logie, Maria A. Brandimonte, Geir Kaufmann, Daniel Reisberg, 1996-03-14 This is the first volume in the Counterpoints Series which explores the issues being debated in psychology child development linguistics and neuroscience Each volume consists of the presentation of three or four extensive chapters by researchers representing key points of view on the issue This text examines one of the liveliest areas of debate in psychology today the relationship between perception and mental imagery A variety of recent studies have pointed to the existence of a strong relationship between memory and mental representation while others have shown that images are open to reinterpretation and manipulation and are therefore not merely static impressions or mental representations of

memories Three core chapters by researchers in the midst of this debate Maria Brandimonte Geir Kaufmann and Dan Reisberg make up the central portion of this text The first chapter is a historical overview of the problem as well as a review of the research in psychology and the argument as it has developed in related fields such as philosophy and artificial intelligence The last chapter pulls together all of the positions and points to new areas of research which may help uncover an explanation for the apparent contradictions in the research Students and researchers in psychology and cognitive psychology will benefit from this comprehensive look at this heated debate
