Materials Processing In The Computer Age:

Materials Processing in the Computer Age Vaughan R. Voller, Marian Stachowicz, Brian G. Thomas, 1991 Materials Processing in the Computer Age V. R. Voller, 1991-02-01 **International Symposium on Materials Processing in the Computer Age**, 1991 *Computer Applications in Near Net-Shape Operations* Andrew Y.C. Nee, Soh K. Ong, Yun G. Wang, 2012-12-06 Having edited Journal of Materials Processing Technology previously entitled Journal of Mechanical Working Technology for close on 25 years I have seen the many dramatic changes that have occurred in the materials processing field Long gone are the days when the only materials processing carried out was virtually the forming of conventional metals and alloys and when the development of a new product or process in a great number of cases called for several months of repetitive trial and error with many mostly intuition or experience based expensive and time consuming modifications being made to the dies until success was achieved Even when a successful product was formed its mechanical properties in terms of springback and dimensional accuracy thickness variations residual stresses surface finish etc remained to be determined Bulk forming operations usually required expensive machining to be carried out on the product to impart the required dimensional accuracy and surface finish Over the years the experience based craft of metal forming has given way to the science of materials processing With the use of the computer forming operations can be simulated with accuracy to determine the best forming route and the associated forming loads and die stresses and to predict the mechanical properties of the formed product even down to its surface texture Advanced Automation Techniques in Adaptive Material Processing Xiaoqi Chen, Rajagopalan Devanathan, Aik Meng Fong, 2002 This volume presents the editors research as well as related recent findings on the applications of modern technologies in electrical and electronic engineering to the automation of some of the common manufacturing processes that have traditionally been handled within the mechanical and material engineering disciplines In particular the book includes the latest research results achieved through applied research and development projects over the past few years at the Gintic Institute of Manufacturing Technology Singapore It discusses advanced automation technologies such as in process sensors laser vision systems and laser strobe vision as well as advanced techniques such as sensory signal processing adaptive process control fuzzy logic neural networks expert systems laser processing control etc The methodologies and techniques are applied to some important material processing applications including grinding polishing machining and welding Practical automation solutions which are complicated by part distortions tool wear process dynamics and variants are explained The research efforts featured in the book are driven by industrial needs They combine theoretical research with practical automation considerations The techniques developed have been either implemented in the factory or prototyped in the laboratory **Modeling for Casting and Solidification Processing** Kuang-Oscar Yu, 2001-10-16 This text seeks to provide a comprehensive technical foundation and practical examples for casting process modelling technology It highlights fundamental theory for solidification and useful applications

for industrial production It also details shape and ingot castings semi solid metalworking and spray forming Materials Processing in the Computer Age II Vaughan R. Voller, Steven P. Marsh, 1994 Computers play a key part in the synthesis control and analysis of materials processes This book explores the role of existing and emerging computer technologies in materials processing operations Topics of discussion include solidification processing solidification phenomena physical modeling measurement and control and electromagnetic and emerging processes *Handbook of Metallurgical Process Design* George E. Totten, Kiyoshi Funatani, Lin Xie, 2004-05-25 Reviewing an extensive array of procedures in hot and cold forming casting heat treatment machining and surface engineering of steel and aluminum this comprehensive reference explores a vast range of processes relating to metallurgical component design enhancing the production and the properties of engineered components while reducing manufacturing costs It surveys the role of computer simulation in alloy design and its impact on material structure and mechanical properties such as fatigue and wear It also discusses alloy design for various materials including steel iron aluminum magnesium titanium super alloy compositions and copper

Soft Computing: Methodologies and Applications Frank Hoffmann, Mario Köppen, Frank Klawonn, Rajkumar Roy, 2006-05-21 The series of Online World Conferences on Soft Computing WSC is organized by the World Federation of Soft Computing WFSC and has become an established annual event in the academic calendar and was already held for the 8th time in 2003 Starting as a small workshop held at Nagoya University Japan in 1994 it has tured to the premier online event on soft computing in industrial applications It has been hosted by the universities of Granada Spain Fraunhofer Gesellschaft Berlin Cran eld University Helsinki University of Technology and Nagoya University The goal of WFSC is to promote soft computing across the world by using the internet as a forum for virtual technical discussion and publishing at no cost to authors and participants The of cial journal of the World Federation on Soft Computing is the journal Applied Soft Computing The 8th WSC Conference WSC8 took place from September 29th to October 10th 2003 Registered participants had the opportunity to follow and discuss the online presentations of authors from all over the world Out of more than 60 subm sions the program committee had accepted 27 papers for nal presentation at WSC8
