Mechanisms of Enzymatic Reactions Perry A. Frey, 1986

Enzymatic Reaction Mechanisms Perry A. Frey, Adrian D. Hegeman, 2007-01-27 Books dealing with the mechanisms of enzymatic reactions were written a generation ago. They included volumes entitled *Bioorganic Mechanisms I and II* by T C Bruice and S J Benkovic published in 1965, the volume entitled *Catalysis in Chemistry and Enzymology* by W P Jencks in 1969, and the volume entitled *Enzymatic Reaction Mechanisms* by C T Walsh in 1979. The Walsh book was based on the course taught by W P Jencks and R H Abeles at Brandeis University in the 1960 s and 1970 s. By the late 1970 s much more could be included about the structures of enzymes and the kinetics and mechanisms of enzymatic reactions themselves, and less emphasis was placed on chemical models. Walsh's book was widely used in courses on enzymatic mechanisms for many years. Much has happened in the field of mechanistic enzymology in the past 15 to 20 years. Walsh's book is both out of date and out of focus in today's world of enzymatic mechanisms. There is no longer a single volume or a small collection of volumes to which students can be directed to obtain a clear understanding of the state of knowledge regarding the chemical mechanisms by which enzymes catalyze biological reactions. There is no single volume to which medicinal chemists and biotechnologists can refer on the subject of enzymatic mechanisms. Practitioners in the field have recognized a need for a new book on enzymatic mechanisms for more than ten years, and several including Walsh have considered undertaking to modernize Walsh's book. However, these good intentions have been abandoned for one reason or another. The great size of the knowledge base in mechanistic enzymology has been a deterrent. It seems too large a subject for a single author, and it is difficult for several authors to coordinate their work to mutual satisfaction. This text by Perry A Frey and Adrian D Hegeman accomplishes this feat, producing the long awaited replacement for Walsh's classic text.

Mechanisms of Enzymatic Reactions, 1986

Enzyme Mechanism from Isotope Effects Paul F. Cook, 1991-09-20 Isotope effects have become one of the most powerful tools available to the enzymologist for probing enzymic mechanisms. *Enzyme Mechanism from Isotope Effects* presents the basic theory underlying isotope effects, including the latest findings on proton tunneling and coupled atomic motions. Specific theoretical applications are emphasized in regard to the types of information that can be obtained using isotope effects. The book also examines recent theoretical treatments of the product dependence of deuterium isotope effects, multiple isotope effects, and isotope effects on intermediate partitioning. Other topics include a complete discussion of methods for measuring isotope effects, including a detailed description of the use of the isotope ratio mass spectrometer to obtain isotope effects, and a review of the literature regarding mechanistic information obtained from isotope effects for individual classes of enzyme catalyzed reactions. *Enzyme Mechanism from Isotope Effects* is an excellent reference source for investigators using isotope effects in their research. The book is also valuable for reference libraries and instructors teaching courses in enzyme mechanism.

Research Awards Index, 1989 *Organic Chemistry of Enzyme-Catalyzed Reactions, Revised Edition* Richard B. Silverman, 2002-02-28 The Organic Chemistry of Enzyme Catalyzed Reactions is not a book on enzymes but rather a book on the general mechanisms involved in chemical reactions involving enzymes An enzyme is a protein molecule in a plant or animal that causes specific reactions without itself being permanently altered or destroyed This is a revised edition of a very successful book which appeals to both academic and industrial markets Illustrates the organic mechanism associated with each enzyme catalyzed reaction Makes the connection between organic reaction mechanisms and enzyme mechanisms Compiles the latest information about molecular mechanisms of enzyme reactions Accompanied by clearly drawn structures schemes and figures Includes an extensive bibliography on enzyme mechanisms covering the last 30 years Explains how enzymes can accelerate the rates of chemical reactions with high specificity Provides approaches to the design of inhibitors of enzyme catalyzed reactions Categorizes the cofactors that are appropriate for catalyzing different classes of reactions Shows how chemical enzyme models are used for mechanistic studies Describes catalytic antibody design and mechanism Includes problem sets and solutions for each chapter Written in an informal and didactic style
