**Methods in Comparative Psychoacoustics** G.M. Klump, R.J. Dooling, Richard Fay, W.C. Stebbins, 2013-11-11 Twenty  
five years ago Bill Stebbins presented the principles of animal psychophysics in an edited volume Stebbins 1970 describing  
an array of modern creative methodologies for investigating the range of sensory systems in a variety of vertebrate species  
These principles included precise stimulus control a well defined behavioral response and a rigorous behavioral procedure  
appropriate to the organism under study As a generation of comparative sensory scientists applied these principles our  
knowledge of sensory and perceptual function in a wide range of animal species has grown dramatically especially in the field  
of hearing Comparative psychoacoustics i.e. the study of the hearing capabilities in animals using behavioral methods is an  
area of animal psychophysics that has seen remarkable advances in methodology over the past 25 years Acoustic stimuli are  
now routinely generated using digital methods providing the researcher with unprecedented possibilities for stimulus control  
and experimental design The strategies and paradigms for data collection and analysis are becoming more refined as well  
again due in large part to the widespread use of computers In this volume the reader will find a modern array of strategies  
designed to measure detection and discrimination of both simple and complex acoustic stimuli as well experimental designs  
to assess how organisms perceive identify and classify acoustic stimuli Refinements in modern methodologies now make it  
possible to compare diverse species tested under similar if not identical experimental conditions *Experimental Analysis of  
Behavior* I.H. Iversen, K.A. Lattal, 2013-10-22 This volume is dedicated to the late B F Skinner as a tribute to his pioneering  
work on the Experimental Analysis of Behavior This science that he initiated studies the behavior of individual organisms  
under laboratory conditions The volume describes a broad collection of representative and effective research techniques in  
the Experimental Analysis of Behavior techniques derived solely from infrahuman subjects which have been selected both for  
their utility in behavior analysis and for their potential value in expanding the use of behavior analysis in the neurosciences  
By bringing together under one cover the expertise of individual authors regarding techniques based on their particular  
laboratory experiences the book provides an informative and practical source of methods and techniques for those practising

Microcomputers in Physiology P. J. Fraser,1988 The rapid development of microcomputers has been a significant gain for the scientific community What is just now being realized is the potential for new experiments and for new approaches to higher levels of measurement and working practice This book describes selected systems which have been developed by physiologists using the new microprocessor based technology It provides a practical introduction to a wide range of techniques and covers useful applications of computers in teaching      **ICIW2007- 2nd International Conference on Information Warfare & Security** Leigh Armistead,2007

Webster,1988      *Eye Movements and Their Role in Visual and Cognitive Processes* Eileen Kowler,1990 This is the first book to deal exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on oculomotor anatomy and physiology The publication of this volume signifies the recognition of the fact that a genuine understanding of eye movement will not come about through the study of neurons alone We need to know about the capacity to make different kinds of eye movement and about how such oculomotor capacity is used to accomplish different sorts of visual and cognitive tasks i e how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject

*Computers and Information Processing World Index* Suzan Deighton,John Gurnsey,Janet Tomlinson,1984      **Perception** ,1979      **The Computer in Experimental Psychology** Richard J. Bird,1981 This book is about the use of computers in experimental psychology Much of it deals with the application of real time computer systems to the carrying out of experiments in the laboratory and there are sections dealing with the concepts of computing underlying these application areas Chapters are also devoted to the subjects of data analysis and to the management of small computer systems and networks It is hoped therefore that with the exception of the subjects of artificial intelligence and the modeling of psychological processes which concern theoretical rather than experimental psychology the book presents a picture of the use of computers in experimental psychology as a whole      **Programmed Learning & Educational Technology** ,1979
