Swerdlow, O. Neugebauer, 2012-12-06 When I first laid out the framework for A History of Ancient Mathematical Astronomy I intended to carry the discussion down to the last applications of Greek astronomical methodology i e Copernicus Brahe and Kepler But as the work proceeded it became evident that this plan was much too ambitious and so I decided to terminate my History with late antiquity well before Islam Nevertheless I did not discard the running commentary that I had prepared when studying De revolutionibus in its relation to the methodology of the Almagest Only recently E S Kennedy and his collaborators had opened access to the Maragha School mainly Ibn ash Shalir revealing close parallels to Copernicus s procedures Accordingly it seemed useful to make available a modern analysis of De revolutionibus and thus in 1975 I prepared for publication Notes on Copernicus In the meantime however Noel Swerdlow also starting from Greek astronomy not only extended his work into a deep analysis of De revolutionibus but also systematically investigated its sources and predecessors Peurbach Regiomontanus etc I was aware of these studies through his publications as well as from numerous conversations on the subject at The Institute for Advanced Study and at Brown University It became clear to me that my own investigations lay at too superficial a level and I therefore withdrew my manuscript and suggested to Swerdlow that he undertake a thoroughgoing revision and amplification of my Notes His acceptance of my proposal initiated the present publication      **At the Origins of Mathematical Economics** Richard Van Den Berg, 2005-12-19 Achille Nicolas Isnard 1749 1803 an engineer with a keen interest in political economy is best known for demonstrating the concept of market equilibrium using a system of simultaneous equations The breadth and depth of his work undoubtedly established him as one of the forerunners of modern mathematical economics yet his seminal contributions to the study of economics remained largely unrecognized until the latter half of the twentieth century This pioneering new book the first in English examines Isnard s life and illuminates his major contributions to political economy It contains substantial extracts from a number of his publications presented both in English translation and in the original French so Isnard can now finally achieve his place at the heart of discussion on the origins of mathematical economics The diverse issues covered here will ensure that this book appeals not only to economists with an interest in the history of mathematical economics but to anyone interested in the emergence of political economy and in wider social thought during the Enlightenment      **The Oxford Handbook of**
