

информатика ИАИ Белорусии Николай Ковалев отметил, что белорусская промышленность готова к модернизации. Необходимость в этом возникает как у руководителей предприятий, так и у руководителей Министратства промышленности. С этой целью в Белорусии созданная Инновационная комиссия нацелена на внедрение и использование инновационных информационных систем и технологий в промышленности. Ее руководителем стал вице-премьер Владимир Савинков.

Вместе с тем, по словам Ковалева, существуют и препятствия. В частности, это касается недостаточных финансовых ресурсов для внедрения информационных технологий в производство и слабые кадры ИТ-специалистов. Кроме того, в республике недостаточно гибкая рыночная экономика инновационности. Так, производственные заказы часто увеличивают на неопределенные «эффективные» исторические средства, подталкивая на внедрение информационных систем. Кроме того, на Белорусию приходится также слабое развитие нормативной базы, касающейся взаимодействия в информационной среде и обмена электронными документами.

Политика модернизации

Вопросы по модернизации, особенно актуальные период белорусской промышленной компании. Формирует новую тенденцию в отрасли и управление этой отраслью экономики. Как отмечают эксперты, сейчас можно говорить о следующей тенденции в белорусской промышленности:

1. Повышение производственных возможностей;
2. Необходимости прозрачности и управления промышленными процессами;
3. Поиск от персонализированного производства;
4. Поиск в компьютеризации промышленного производства;
5. Новый подход к вопросу рентабельности.

Современная реальность подталкивает к новым подходам, технологиям, новым управлению. Реальность стимулирует ИТ-системы управления промышленными объектами, такие как MES. Это автоматизированные системы управления производством под одной информационной моделью для руководителей предприятий.

«Сегодня в Белорусии формируется управленческое промышленное сознание, так, — убежден Андрей Карпен. — Первый принцип состоит в изменении менеджмента предприятия: думать не о том, как улучшить производство деталей, а как промышленно изменить подход к производству, чтобы продукт соответствовал спросу и был конкурентоспособен на зарубежных рынках. Во-вторых, управление для предприятия на плановом этапе сегодня неуместно, так как идет речь о производстве. Он сам каждый день хочет изменить путь на пути промышленного процесса. В-третьих, менеджер тоже должен пережить от руководителя свободу и стратегическое мышление. Например, был, компания с гиперинтенсивным производством на выходе продукции более миллиона деталей под каждым конкретным номером клиента. Это и стимулирует новый подход к расчету рентабельности промышленного предприятия. Главный вопрос, который стоит перед нами сегодня — это принцип адаптации рыночных требований ИТ-рынка и рынка белорусской промышленной компании и ее внедрения. Процесс внедрения предполагает стратегическое решение по промышленному производству — с одной стороны, и быть в состоянии менять бизнес-модель компании — с другой. Основная проблема всех видов клиентов конкретного производства необходимость для них внедрения на них MES-систем.

«В Белорусии мы сейчас наблюдаем эффект «замедленного внедрения». Мы идем по пути Запада, переживаем все трудности и на пороге минимума данных, чем мы были бы 10-20 лет назад, — считает директор ООО «Белитек» Александр Коваленко. — Так, MES-системы достигают почти двенадцати лет, но реальность остается

Страна «IT-Беларусь»

MES — (Manufacturing Enterprise Resource Planning) — компьютеризированная система производства, автоматизированная система управления промышленными, информационными ресурсами предприятия. Система также может включать модуль «Складского учета, контроля, учета, инвентаризации и оптимизации запасов, производства и доставки, клиентского обслуживания, а также реализации продукции».

при этом внедрение этих программных продуктов, это адаптировано на конкретном рынке страны. После обучения, в Белорусии возникло негласное мнение, что белорусские предприятия, которые способны перенести эффективные западные технологии в нашу действительность и внедрить их. Такой компания будет внести свой вклад в модернизацию белорусской промышленности при помощи MES-систем, систем автоматизированного планирования производства (APC), решений для управления конструкцией (TCM) и решений для проверки моделирования, анализа и автоматизированной подготовки производства (PLP).

Вопрос эффективности

Исследования, проведенные международным консалтинговым институтом MES4 International, показали достаточно впечатляющие показатели эффективности для промышленного предприятия при применении внедрения в систему MES-систем:

- повышение общей производительности — на + 20%;
- повышение уровня производительности — на + 45%;
- повышение эффективности производства — на + 25%;
- повышение времени на ввод данных — на + 10%;
- повышение эффективности обмена между производственными единицами — на + 45%.

По данным Международного института проблем информатики ИАИ Белорусии, внедрение автоматизированных систем управления на предприятиях характеризуются рядом особенностей:

- ускорение обработки заказов клиентов — более чем в 1,5 раз;
- увеличением количества обрабатываемых заказов при том же количестве работников — на 50%;
- уменьшением затрат на единицу продукции, увеличением производства материалов — в среднем на 20%;
- увеличением уровня обслуживания — на 30%;
- увеличением среднего размера предприятия — в среднем на 5%;
- увеличением времени на основе оптимизации в режиме реального времени — на уровне 100%.
