Information Ecology Thomas H. Davenport,1997-06-26 According to virtually every business writer we are in the midst of a new information age one that will revolutionize how workers work how companies compete perhaps even how thinkers think And it is certainly true that Information Technology has become a giant industry In America more that 50% of all capital spending goes into IT accounting for more than a third of the growth of the entire American economy in the last four years Over the last decade IT spending in the U S is estimated at 3 trillion dollars And yet by almost all accounts IT hasn t worked all that well Why is it that so many of the companies that have invested in these costly new technologies never saw the returns they had hoped for And why do workers even CEOs find it so hard to adjust to new IT systems In Information

Ecology Thomas Davenport proposes a revolutionary new way to look at information management one that takes into account the total information environment within an organization Arguing that the information that comes from computer systems may be considerably less valuable to managers than information that flows in from a variety of other sources the author describes an approach that encompasses the company s entire information environment the management of which he calls information ecology Only when organizations are able to combine and integrate these diverse sources of information and to take them to a higher level where information becomes knowledge will they realize the full power of their information ecology Thus the author puts people not technology at the center of the information world Information and knowledge are human creations he points out and we will never excel at managing them until we give people a primary role Citing examples drawn from his own extensive research and consulting including such major firms as A T explores the infighting jealousy over resources and political battles that can frustrate information sharing underscores the importance of looking at how people really use information how they search for it modify it share it hoard it and even ignore it and the kinds of information they want describes the ideal information staff who not only store and retrieve information but also prune provide context enhance style and choose the right presentation medium in an age of work overload vital information must be presented compellingly so the appropriate people recognize and use it examines how information management should be done on a day to day basis and presents several alternatives to the machine engineering approach to structuring and modeling information Davenport makes explicit what many managers already know in their gut that useful information flow depends on people not equipment In Information Ecology he paves the way for all managers to build a more competitive creative practical information environment for their companies

Information Technology Evaluation Methods and Management Wim Van Grembergen, 2001-01-01 The evaluation of IT and its business value are the subject of many academic and business discussions Investments in IT are growing extensively and business managers worry about the fact that the benefits might not be as high as expected This phenomenon is often called the IT investment paradox or the IT Black Hole large sums are invested in IT that seem to be swallowed by a large black hole without rendering many returns How to measure the benefits of IT is the concern of this book titled Information Technology Evaluation Methods and Management The different IT evaluation approaches and methods are discussed and illustrated with cases traditional financial evaluations such as the return on investment information economics and the recently introduced IT Balanced Scorecard The latter approach is proposed as an ideal mechanism to support the IT business alignment process and its related IT governance process Among some of the topics included in this book are software measurement ERP project evaluation strategic
