Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy. Editorial Advisory Board: Andrew Aberdein, Florida Institute of Technology USA; Jody Azzouni, Tufts University USA; Otávio Bueno, University of Miami USA; William Byers, Concordia University Canada; Carlo Cellucci, Sapienza University of Rome Italy; Chandler Davis, University of Toronto Canada; 1926–2022 Paul Ernest, University of Exeter UK; Michele Friend, George Washington University USA; Reuben Hersch, University of New Mexico USA; 1927–2020 Kyeong Hwa Lee, Seoul National University South Korea; Yuri Manin, Max Planck Institute for Mathematics Germany; 1937–2023 Athanase Papadopoulos, University of Strasbourg France; Ulf Persson, Chalmers University of Technology Sweden; John Stillwell, University of San Francisco USA; David Tall, University of Warwick UK; 1941–2024 This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersch, and Yuri Manin. Barry Mazur, Gerhard Gade, University Professor, Harvard University. This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that

Newcombe, 1912 **Miscellanea Curiosa Mathematica** Francis Holliday, 1745 [British Museum Catalogue of printed Books](#), 1892 **On Autobiographical Memory** Anita Kasabova, 2009-05-27 The aim of this book is to provide an account of autobiographical memory the memory of episodes in the subject's autobiography and to answer the following questions what happens when we remember something Why do we remember some things rather than others The main assumptions in this book are that autobiographical memory is an active structure of a representational nature and that autobiographical memory is a construct of the imagination enabled by a semantic principle the ground consequence relation Anita Kasabova reconstructs the epistemological accounts of memory by the Prague philosopher and mathematician Bernard Bolzano and the Prague physiologist Ewald Hering as well as the phenomenological accounts by Edmund Husserl and Roman Ingarden and discusses various accounts put forward within analytic philosophy

She examines the trace theory and its relation to the phenomenology of autobiographical memory and the different temporal perspectives that characterize this form of memory Kasabova formulates a philosophical explication of how autobiographical memory works dealing with issues such as what are the defining features of autobiographical memory how is it structured and how does it function what is a recollection and what are the necessary and for the most part sufficient conditions for a recollection to occur Kasabova argues that such conditions are a sense of self and a sense of connectedness of the self that is semantic rather than causal the subject's sense of ownership of past experiences and the capacity of imagination for mental time travel and thinking about past episodes you have to be able to produce representations not bound to the current situation It is argued that access to the subject's personal past cannot occur otherwise than by construction in imagination In order to reproduce a past experience in the present imagination is necessary for representing a past episode as if it were present Other necessary conditions for autobiographical memory are time awareness a continuous temporal reference frame a successive temporal order and the capacity to refer back to previous positions in time Finally semantic relations of part whole and ground consequence are crucial for explaining autobiographical memory It is argued that the part whole relation is the principle of the memory trace and that the grounding relation coordinates the subject's perspective on past episodes in recollective statements Kasabova argues that autobiographical memory is basically semantic as it is grounded by and constructed through a sense making relation expressed by the explanatory conjunct because we recall certain experiences or actions rather than other because we are sensitive to the reasons for having experienced it The new book by Anita Kasabova fills a gap between traditional philosophical armchair speculations about memory and contemporary cognitive theories which have grown out of extensive experimental research The book's main idea that autobiographical memory is not a mere recollection but rather an active reconstruction of our past memories is not an entirely new one Anita Kasabova however provides a new take on this idea by revealing that the theories of Bolzano Hering and Husserl not only bear historical significance but properly reconstructed they might be viewed as an important contribution to the contemporary interdisciplinary studies of memory An appreciable achievement of the book is the chosen conceptual framework it makes the idiosyncratic language of Bolzano and Husserl accessible to contemporary cognitive scientists as well as making the recent cognitive theories understandable for the traditional philosophical scholars Even if this were the only achievement of Anita Kasabova and it is not it would represent her monograph as a book of a great merit for a large community of memory scholars
