Community-Based Health Literacy Interventions National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2018-05-10 In its landmark report Health Literacy A Prescription to End Confusion the Institute of Medicine noted that there are 90 million adults in the United States with limited health literacy who cannot fully benefit from what the health and health care systems have to offer Since the release of that report health literacy has become a vibrant research field that has developed and disseminated a wide range of tools and practices that have helped organizations ranging in size from large health care systems to individual health care providers and pharmacists to engage in health literate discussions with and provide health literate materials for patients and family members Improving the health literacy of organizations can be an important component of addressing the social determinants of health and achieving the triple aim of improving the patient experience improving the health of populations and reducing the cost of care However the focus on organizations does not address the larger issue of how to improve health literacy across the U S population To get a better understanding of the state of community based health literacy interventions the Roundtable on Health Literacy hosted a workshop on July 19 2017 on community based health literacy interventions It featured examples of community based health literacy programs discussions on how to evaluate such programs and the actions the field can take to embrace this larger view of health literacy This publication summarizes the presentations and discussions from the workshop

Innovations in Health Literacy Research Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2011-03-07 Nearly nine out of 10 adults have difficulty using everyday health information to make good health decisions The Institute of Medicine IOM Roundtable on Health Literacy held a meeting on May 27 2010 to explore areas for research in health literacy the relationship between health literacy and health disparities and ways to apply information technology to improve health literacy

Health Literacy Institute of Medicine, Board on Neuroscience and Behavioral Health, Committee on Health Literacy, 2004-06-29 To maintain their own health and the health of their families and communities consumers rely heavily on the health information that is available to them This information is at the core of the partnerships that patients and their families forge with today s complex modern health systems This information may be provided in a variety of forms ranging from a discussion between a patient and a health care provider to a health promotion advertisement a consent form or one of many other forms of health communication common in our society Yet millions of Americans cannot understand or act upon this information To address this problem the field of health literacy brings together research and practice from diverse fields including education health services and social and cultural sciences and the many

organizations whose actions can improve or impede health literacy Health Literacy Prescription to End Confusion examines the body of knowledge that applies to the field of health literacy and recommends actions to promote a health literate society By examining the extent of limited health literacy and the ways to improve it we can improve the health of individuals and populations Health Literacy Implications for Health Care Reform Institute of Medicine,Board on Population Health and Public Health Practice,Roundtable on Health Literacy,2011-07-20 Health literacy is the degree to which one can understand and make decisions based on health information Nearly 90 million adults in the United States have limited health literacy While poor health literacy spans all demographics rates of low health literacy are disproportionately higher among those with lower socioeconomic status limited education or limited English proficiency as well as among the elderly and individuals with mental or physical disabilities Studies have shown that there is a correlation between low health literacy and poor health outcomes In 2010 President Obama signed the Affordable Care Act designed to extend access to health care coverage to millions of Americans who have been previously uninsured Many of the newly eligible individuals who should benefit most from the ACA however are least prepared to realize those benefits as a result of low health literacy They will face significant challenges understanding what coverage they are eligible for under the ACA making informed choices about the best options for themselves and their families and completing the enrollment process Health Literacy Implications for Health Care Reform explores opportunities to advance health literacy in association with the implementation of health care reform The report focuses on building partnerships to advance the field of health literacy by translating research findings into practical strategies for implementation and on educating the public press and policymakers regarding issues of health literacy

Health Literacy, eHealth, and Communication Institute of Medicine,Board on Population Health and Public Health Practice,Roundtable on Health Literacy,2009-04-24 There is great enthusiasm over the use of emerging interactive health information technologies often referred to as eHealth and the potential these technologies have to improve the quality capacity and efficiency of the health care system However many doctors advocacy groups policy makers and consumers are concerned that electronic health systems might help individuals and communities with greater resources while leaving behind those with limited access to technology In order to address this problem the Institute of Medicine s Roundtable on Health Literacy held a workshop to explore the current status of communication technology the challenges for its use in populations with low health literacy and the strategies for increasing the benefit of these technologies for populations with low health literacy The summary of the workshop Health Literacy eHealth and Communication Putting the Consumer First includes participants comments on these issues Building the Case for Health Literacy National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Population Health and Public Health Practice,Roundtable on Health Literacy,2018-07-26 The field of health literacy has evolved from one focused on individuals to one that recognizes that health literacy is multidimensional While communicating in a health literate manner is important for everyone it is

particularly important when communicating with those with limited health literacy who also experience more serious medication errors higher rates of hospitalization and use of the emergency room poor health outcomes and increased mortality Over the past decade research has shown that health literacy interventions can significantly impact various areas including health care costs outcomes and health disparities To understand the extent to which health literacy has been shown to be effective at contributing to the Quadruple Aim of improving the health of communities providing better care providing affordable care and improving the experience of the health care team the National Academies of Sciences Engineering and Medicine convened a public workshop on building the case for health literacy This publication summarizes the presentations and discussions from the workshop and highlights important lessons about the role of health literacy in meeting the Quadruple Aim case studies of organizations that have adopted health literacy and discussions among the different stakeholders involved in making the case for health literacy *Developing Health Literacy Skills in Children and Youth* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2020-12-10 Young people develop health literacy skills in a variety of environments facing critical thinking challenges about their health from school home and family life peers and social life and online To explore the development of health literacy skills in youth the Roundtable on Health Literacy convened a workshop on November 19 2019 in Washington DC Presenters at the workshop discussed factors relating to health literacy skills and ways to further develop those skills among youth from early childhood to young adulthood This publication summarizes the presentation and discussion of the workshop Innovations in Health Literacy Research Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2011-04-07 Nearly nine out of 10 adults have difficulty using everyday health information to make good health decisions The Institute of Medicine IOM Roundtable on Health Literacy held a meeting on May 27 2010 to explore areas for research in health literacy the relationship between health literacy and health disparities and ways to apply information technology to improve health literacy *Measures of Health Literacy* Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2009-12-30 Health literacy the ability for individuals to obtain process and understand basic health information and services to facilitate appropriate health decisions is increasingly recognized as an important facet of health care and health outcomes Although research on health literacy has grown tremendously in the past decade there is no widely agreed upon framework for health literacy as a determinant of health outcomes Most instruments focus on assessing an individual's health literacy yet the scope of health literacy reaches far beyond an individual's skills and abilities Health literacy occurs in the context of the health care system and therefore measures of health literacy must also assess the demands and complexities of the health care systems with which patients interact For example measures are needed to determine how well the system has been organized so that it can be navigated by individuals with different levels

of health literacy and how well health organizations are doing at making health information understandable and actionable To examine what is known about measures of health literacy the Institute of Medicine convened a workshop The workshop summarized in this volume reviews the current status of measures of health literacy including those used in the health care setting discusses possible surrogate measures that might be used to assess health literacy and explores ways in which health literacy measures can be used to assess patient centered approaches to care *Organizational Change to Improve Health Literacy* Roundtable on Health Literacy, Board on Population Health and Public Health Practice, Institute of Medicine, 2013-10-29 Organizational Change to Improve Health Literacy is the summary of a workshop convened in April 2013 by the Institute of Medicine Board on Population Health and Public Health Practice Roundtable on Health Literacy As a follow up to the 2012 discussion paper Ten Attributes of a Health Literate Health Care Organization participants met to examine what is known about implementation of the attributes of a health literate health care organization and to create a network of health literacy implementers who can share information about health literacy innovations and problem solving This report discusses implementation approaches and shares tools that could be used in implementing specific literacy strategies Although health literacy is commonly defined as an individual trait there is a growing appreciation that health literacy does not depend on the skills of individuals alone Health literacy is the product of the interaction between individuals capacities and the health literacy related demands and complexities of the health care system System changes are needed to better align health care demands with the public s skills and abilities Organizational Change to Improve Health Literacy focuses on changes that could be made to achieve this goal *Promoting Health Literacy to Encourage Prevention and Wellness* Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2011-12-01 Health literacy has been shown to affect health outcomes The use of preventive services improves health and prevents costly health care expenditures Several studies have found that health literacy makes a difference in the extent to which populations use preventive services On September 15 2009 the Institute of Medicine Roundtable on Health Literacy held a workshop to explore approaches to integrate health literacy into primary and secondary prevention Promoting Health Literacy to Encourage Prevention and Wellness serves as a factual account of the discussion that took place at the workshop The report describes the inclusion of health literacy into public health prevention programs at the national state and local levels reviews how insurance companies factor health literacy into their prevention programs and discusses industry contributions to providing health literate primary and secondary prevention Health Literacy in Clinical Practice and Public Health Elliot R. Siegel, 2020-06-15 Health literacy is the ultimate global currency of health and well being Without health literacy medicine fails public health fails and people pay the cost for these failures with their lives As this book goes to press the world is confronted by the COVID 19 pandemic Improving health literacy becomes increasingly important if we are to successfully confront the challenges that stress our systems of medicine and public health like never before Richard H

Health Literacy in Clinical Research National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2020-06-28 Because of the individualized nature of drug and therapeutic treatments clinical trials require participants who represent the diversity of the patient base If early trials do not have a broad patient base it can be difficult to know who may or may not benefit from or respond to a treatment later In addition to diversity in recruitment informed consent during participation is also crucial If participants do not fully understand what they are signing up for they may become confused mistrustful or drop out of a trial altogether confusing investigators and possibly affecting the generalizability of a study To explore the incorporation of health literacy practices into clinical trials the Roundtable on Health Literacy convened a workshop titled *Clinical Trials Practice and Impact* on April 11 2019 in Washington DC The workshop presentations and discussion centered around issues related to the challenges or barriers for diverse populations participation in clinical trials best practices for clinical trial sites and researchers incorporating health literacy practices and effective health literacy strategies for clear communication with participants This publication summarizes the presentation and discussion of the workshop

Health Literacy National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, 2015-08-06 In 2004 the Institute of Medicine released *Health Literacy A Prescription to End Confusion* a report on the then underappreciated challenge of enabling patients to comprehend their condition and treatment to make the best decisions for their care and to take the right medications at the right time in the intended dose That report documented the problems origins and consequences of the fact that tens of millions of U S adults are unable to read complex texts including many health related

materials and it proposed possible solutions to those problems To commemorate the anniversary of the release of the 2004 health literacy report the Institute of Medicine s Roundtable on Health Literacy convened a 1 day public workshop to assess the progress made in the field of health literacy over the past decade the current state of the field and the future of health literacy at the local national and international levels Health Literacy Past Present and Future summarizes the presentation and discussion of the workshop

People Living with Disabilities National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Roundtable on Health Literacy, Roundtable on the Promotion of Health Equity, 2018-09-20 Poor health literacy has many negative consequences for achieving the quadruple aim of better care improving the health of the community and the population providing affordable care and improving the work life of health care providers and those consequences disproportionately affect those individuals with disabilities and those who experience health disparities To better understand how health literacy health equity and health disparities intersect for individuals living with disabilities the Roundtable on the Promotion of Health Equity and the Elimination of Health Disparities and the Roundtable on Health Literacy jointly sponsored a workshop that was held on June 14 2016 in Washington DC This publication summarizes the presentations and discussions from the workshop
