Reading The Skies Cultural History 1650 1820:

Reading the Skies Vladimir Jankovic, 2001-04-19 From the time of Aristotle until the late eighteenth century meteorology meant the study of meteors spectacular objects in the skies beneath the moon which included everything from shooting stars to hailstorms In *Reading the Skies* Vladimir Jankovic traces the history of this meteorological tradition in Enlightenment Britain examining its scientific and cultural significance Jankovic interweaves classical traditions folk popular beliefs and practices and the increasingly quantitative approaches of urban university men to understanding the wonders of the skies He places special emphasis on the role that detailed meteorological observations played in natural history and chorography or local geography in religious and political debates and in agriculture Drawing on a number of archival sources including correspondence and weather diaries as well as contemporary pamphlets tracts and other printed sources reporting prodigious phenomena in the skies this book will interest historians of science Britain and the environment **Meteorology**

in Nineteenth-Century Society Aitor Anduaga, 2025-10-20 This four volume set of thematically focused and curated primary sources examines meteorology in nineteenth century society Knowing the history of meteorology and climatology since their inception as physical sciences in the nineteenth century is fundamental to understanding the causes and historical patterns of the severe weather and climate change that greatly preoccupy today s society Thematically focused collections of primary sources support the research and study needs not only of scholars but also graduate and postgraduate students To this end the volumes contextualize and explain the contents of these sources The collection brings together the most relevant themes in current scholarship weather forecasting and nation state building cyclones trade and navigation meteorology and religion and weather climate and empire *James Watt, Chemist* David Philip Miller, 2015-10-06 Miller examines Watt s illustrious engineering career in light of his parallel interest in chemistry arguing that Watt s conception of steam engineering relied upon chemical understandings

Atmosphere, Architecture, Cinema Michael Tawa, 2022-12-05 *Atmosphere Cinema Architecture Thematic Reflections on Ambiance and Place* explores cinema and architecture as ambient and affective settings or circumstances that can enable the emergence of atmosphere This book is an interdisciplinary reading of cinematographic practice which develops useful implications for spatial composition in art and architectural design The way a film is set up directed composed framed and technically constructed can provide parallels analogies and metaphors for the spatial organisation of cities landscapes and buildings Likewise the way a built setting is conceived and devised can inform approaches to framing and spatial organisation in cinematography The book begins on a personal note with a series of recollected atmospheric experiences leading to an investigation of ambiguity and consilient discrepancy as circumstantial conditions necessary for the production of atmosphere The mood of melancholia is explored to show the pivotal role that ambiguity discrepancy and irresolution play in its distinctive ambiance *Atmosphere* is then defined as an emergent condition arising between an ambient affective circumstance and a mooded human being The book then moves to

analyse the inherent conditions in the setup of filmic and architectural settings that render them atmospheric Reference is made to the cinema of Bresson Resnais Lynch Tarr Malik and Campion and to Romanesque tympanae the architectonic scenography of Franz Kafka's novel *The Castle* and the work of Spanish architects Flores Prats The concluding section *Anatomy of Atmosphere* is a lexicon of concepts themes and tactics around atmosphere that might usefully inform creative practice

A ^ATemperate Empire Anya Zilberstein, 2016-09-29 *A Temperate Empire* explores how early North American settlers understood the widespread process of climate warming and tried to remake local climates through colonial settlement and economic development

Performing Medicine Michael Brown, 2018-02-28 When did medicine become modern This book takes a fresh look at one of the most important questions in the history of medicine It explores how the cultures values and meanings of medicine were transformed across the late eighteenth and early nineteenth centuries as its practitioners came to submerge their local identities as urbane and learned gentlemen into the ideal of a nationwide and scientifically based medical profession Moving beyond traditional accounts of professionalization it demonstrates how visions of what medicine was and might be were shaped by wider social and political forces from the eighteenth century values of civic gentility to the radical and socially progressive ideologies of the age of reform Focusing on the provincial English city of York it draws on a rich and wide ranging archival record including letters diaries newspapers and portraits to reveal how these changes took place at the level of everyday practice experience and representation

Field Life Jeremy Vetter, 2016-11-01 *Field Life* examines the practice of science in the field in the Great Plains and Rocky Mountains of the American West between the 1860s and the 1910s when the railroad was the dominant form of long distance transportation Grounded in approaches from environmental history and the history of technology it emphasizes the material basis of scientific fieldwork joining together the human labor that produced knowledge with the natural world in which those practices were embedded Four distinct modes of field practice which were shared by different field science disciplines proliferated during this period surveys lay networks quarries and stations and this book explores the dynamics that underpinned each of them Using two diverse case studies to animate each mode of practice as well as the making of the field as a place for science *Field Life* combines textured analysis of specific examples of field science on the ground with wider discussion of the commonalities in the practices of a diverse array of field sciences including the earth and physical sciences the life and agricultural sciences and the human sciences By situating science in its regional environmental context *Field Life* analyzes the intersection between the cosmopolitan knowledge of science and the experiential knowledge of people living in the field Examples of field science in the Plains and Rockies range widely geological surveys and weather observing networks quarries to uncover dinosaur fossils and archaeological remains and branch agricultural experiment stations and mountain biological field stations

Queens, Queenship, and Natural Resource Management in Premodern Europe, 1400-1800 Susan Broomhall, Clare Davidson, 2025-04-14 This innovative collection examines how European queens participated in the

conceptualisation mobilisation and transformation of natural resources from the fifteenth to the end of the eighteenth century Early modern queens interacted with human and nonhuman worlds through natural resource management activities that have rarely been the focus of sustained historical analysis This volume engages with the wide range of nonhuman materials living and inanimate that premodern queens had the power to direct and dispose of to utilise enjoy and commercialise to visualise and commemorate and even to destroy on and in their lands forests waterways and oceans Both queenship and natural resource management were configured by contemporary gender ideologies which structured a dynamic relationship between queenship and the more than human world The case studies in this collection explore how queens natural resource management was impacted by their cultural and personal contexts particularly their changing status as queens regnant consort dowager or regent The contributors draw on diverse materials and employ a variety of historical approaches including political economic cultural literary legal and animal studies to demonstrate how queens interacted with the nonhuman world and how their engagements were embedded in premodern gender rules This collection will be of great value for undergraduate and postgraduate students and scholars in gender and women s history environmental history queenship studies and early modern studies

The Structures of Practical Knowledge Matteo Valleriani, 2017-02-20

The Structures of Practical Knowledge investigates the nature of practical knowledge why how when and by whom it is codified and once codified how this knowledge is structured The inquiry unfolds in a series of fifteen case studies which range in focus from early modern Italy to eighteenth century China At the heart of each study is a shared definition of practical knowledge that is knowledge needed to obtain a certain outcome whether that

be an artistic or mechanical artifact a healing practice or a mathematical result While the content of practical knowledge is widely variable this study shows that all practical knowledge is formally equivalent in following a defined workflow as reflected in a construction procedure a recipe or an algorithm As explored in the volume s fifteen contributions there are three levels at which structures of practical knowledge may be understood and examined At the most immediate level there are the individual workflows that encompasses practical knowledge itself Probing further it is possible to examine the structure of practical knowledge as it is externalized and codified in texts drawings and artifacts such as models Finally practical knowledge is also related to social structures which fundamentally determine its dissemination and evolution into new knowledge structures The social structures of professionals and institutions represent the critical means by which practical knowledge takes form These actors are the agents of codification and by means of selection appropriation investment and knowledge development they determine the formation of new structures of practical knowledge On a more abstract level the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge Rich in subject matter and incisive in the theory it lays out this volume represents an important contribution to the history of science and epistemology Individually the fifteen case studies encompassing the history of architecture mining brewing glass production printing ballistics mechanics cartography cosmology and astronomy are replete with original research and offer new insights into the history of science Taken together the contributions remodel historical epistemology as a whole elucidating the underlining knowledge structures that transcend disciplinary boundaries and that unite practitioners across time and space

Wordsworth and the Poetics of Air Thomas H. Ford, 2018-04-30

Before the ideas we now define as Romanticism took hold the word atmosphere meant only the physical stuff of air afterwards it could mean almost anything from a historical mood or spirit to the character or style of an artwork Thomas H Ford traces this shift of meaning which he sees as first occurring in the poetry of William Wordsworth Gradually air and atmosphere took on the new status of metaphor as Wordsworth and other poets re imagined poetry as a textual area of aerial communication conveying the breath of a transitory moment to other times and places via the printed page Reading Romantic poetry through this ecological and ecocritical lens Ford goes on to ask what the poems of the Romantic period mean for us in a new age of climate change when the relationship between physical climates and cultural political and literary atmospheres is once again being transformed

Natural Disaster at the Closing of the Dutch Golden Age Adam Sundberg, 2022-01-27 By the early eighteenth century the economic primacy cultural efflorescence and geopolitical power of the Dutch Republic appeared to be waning The end of this Golden Age was also an era of natural disasters Between the late seventeenth and the mid eighteenth century Dutch communities weathered numerous calamities including river and coastal floods cattle plagues and an outbreak of strange mollusks that threatened the literal foundations of the Republic Adam Sundberg demonstrates that these disasters emerged out of longstanding changes in environment and society They were also fundamental to the Dutch experience and understanding of eighteenth century decline Disasters provoked widespread suffering but they also opened opportunities to retool management strategies expand the scale of response and to reconsider the ultimate meaning of catastrophe This book reveals a dynamic and often resilient picture of a society coping with calamity at odds with historical assessments of eighteenth century stagnation

The Care of Brute Beasts Louise Hill Curth, 2010 This book is about medical beliefs and practices for animals in early modern England Although there are numerous texts on human health this is the first to focus exclusively on animals during this period For most academics the foundation of the London Veterinary College in 1791 marks the beginning of modern veterinary medicine with the period before unworthy of serious study In fact there is ample evidence of how the importance of animals resulted in a highly complex system of both preventative and remedial care This book is divided into sections which start by setting the scene with an overview of animals in early modern England and the contemporary principles behind health and illness It moves onto an examination of the medical marketplace and printed literature on animal health care followed by an in depth look at preventative and remedial methods It ends by addressing the question of what impact if any new colleges had on veterinary beliefs and practices

The Scientific Revolution Steven Shapin, 2018-11-05 This scholarly and accessible study presents a provocative new reading of the late sixteenth and seventeenth century advances in scientific inquiry Kirkus Reviews In *The Scientific Revolution* historian Steven Shapin challenges the very idea that any such a revolution ever took place Rejecting the narrative that a new and unifying paradigm suddenly took hold he demonstrates how the conduct of science emerged from a wide array of early modern philosophical agendas political commitments and religious beliefs In this analysis early modern science is shown not as a set of disembodied ideas but as historically situated ways of knowing and doing Shapin shows that every principle identified as the modernizing essence of science whether it s experimentalism mathematical methodology or a mechanical conception of nature was in fact contested by sixteenth and seventeenth century practitioners with equal claims to modernity Shapin argues that this contested legacy is nevertheless rightly understood as the origin of

modern science its problems as well as its acknowledged achievements This updated edition includes a new bibliographic essay featuring the latest scholarship An excellent book Anthony Gottlieb New York Times Book Review Weather Architecture Jonathan Hill,2013-06-17 Weather Architecture further extends Jonathan Hill s investigation of authorship by recognising the creativity of the weather At a time when environmental awareness is of growing relevance the overriding aim is to understand a history of architecture as a history of weather and thus to consider the weather as an architectural author that affects design construction and use in a creative dialogue with other authors such as the architect and user Environmental discussions in architecture tend to focus on the practical or the poetic but here they are considered together Rather than investigate architecture s relations to the weather in isolation they are integrated into a wider discussion of cultural and social influences on architecture The analysis of weather s effects on the design and experience of specific buildings and gardens is interwoven with a historical survey of changing attitudes to the weather in the arts sciences and society leading to a critical re evaluation of contemporary responses to climate change *Divine Providence in Early Modern Economic Thought* Joost Hengstmengel,2019-05-21 In this important volume Joost Hengstmengel examines the doctrine of divine providence and how it served as explanation and justification in economic debates in the sixteenth seventeenth and eighteenth centuries throughout Western Europe The author discusses five different areas in which God was associated with the economy international trade division of labour value and price self interest and poverty and inequality Ultimately it is shown that theological ideas continued to influence economic thought beyond the Medieval period and that the science of economics as we know it today has theological origins Interdisciplinary in nature this book will be of interest to advanced students and researchers in the history of economic thought the history of theology philosophy and intellectual history *Vital Beauty* Joke Brouwer,Arjen Mulder,Lars Spuybroek,2012 Philosophers anthropologists political thinkers and artists take a closer look at what the idea of beauty can mean to their disciplines in an effort to redefine what beauty is and what it means to the design practice and art The book focuses on the question of how the age old notion of beauty can regain an importance appropriate to the 21st century The Cambridge Companion to Literature and Climate Adeline Johns-Putra,Kelly Sultzbach,2022-04-07 This volume unfolds the complex relationship between literature and climate by uniquely illuminating historical complexity diverse viewpoints and emerging issues *Ossianic Unconformities* Eric Gidal,2015-08-25 In a sequence of publications in the 1760s James Macpherson a Scottish schoolteacher in the central Highlands created fantastic epics of ancient heroes and presented them as genuine translations of the poetry of Ossian a fictionalized Caledonian bard of the third century In *Ossianic Unconformities* Eric Gidal introduces the idiosyncratic publications of a group of nineteenth century Scottish eccentrics who used statistics cartography and geomorphology to map and thereby vindicate Macpherson s controversial eighteenth century renderings of Gaelic oral traditions Although these writers primarily sought to establish the authenticity of Macpherson s translations they came to record through promotion

evasion and confrontation the massive changes being wrought upon Scottish and Irish lands by British industrialization Their obsessive and elaborate attempts to fix both the poetry and the land into a stable set of coordinates developed what we can now perceive as a nascent ecological perspective on literature in a changing world Gidal examines the details of these imaginary geographies in conjunction with the social and spatial histories of Belfast and the River Lagan valley Glasgow and the Firth of Clyde and the Highlands and Western Isles of Scotland regions that form both the sixth century kingdom of Dál Riata and the fabled terrain of the Ossianic poems Combining environmental and industrial histories with the reception of the poems of Ossian *Ossianic Unconformities* unites literary history and book studies with geography cartography and geology to present and consider imaginative responses to environmental catastrophe
