Readings From Left To Right:

Reading Appalachia from Left to Right Carol Mason, 2011-02-23 In *Reading Appalachia from Left to Right* Carol Mason examines the legacies of a pivotal 1974 curriculum dispute in West Virginia that heralded the rightward shift in American culture and politics. At a time when black nationalists and white conservatives were both maligned as extremists for opposing education reform, the wife of a fundamentalist preacher who objected to new language arts textbooks featuring multiracial literature sparked the yearlong conflict. It was the most violent textbook battle in America, inspiring mass marches, rallies by white supremacists, boycotts by parents, and strikes by coal miners. Schools were closed several times due to arson and dynamite while national and international news teams descended on Charleston. A native of Kanawha County, Mason infuses local insight into this study of historically left-leaning protesters ushering in cultural conservatism. Exploring how reports of the conflict as a hillbilly feud affected all involved, she draws on substantial archival research and interviews with Klansmen, evangelicals, miners, bombers, and businessmen, all of whom like herself were residents of Kanawha County during the dispute. Mason investigates vulgar accusations of racism that precluded a richer understanding of how ethnicity, race, class, and gender blended together as white protesters set out to protect their children's souls. In the process, she demonstrates how the significance of the controversy goes well beyond resistance to social change on the part of Christian fundamentalists or a cultural clash between elite educators and working-class citizens. The alliances, tactics, and political discourses that emerged in the Kanawha Valley in 1974 crossed traditional lines, inspiring innovations in neo-Nazi organizing, propelling Christian conservatism into the limelight, and providing models for women of the New Right.

The Psychology of Left and Right Michael C. Corballis, Ivan L. Beale, 2020-09-10 Originally published in 1976, this title deals with the problem of how we tell left from right. The authors argue that the ability to tell left from right depends ultimately on a bodily asymmetry, such as preference for one or the other hand, or dominance of one side of the brain. This has implications for child development, reading disability, navigation, art, and culture.

This volume integrates past clinical findings with the latest research on cerebral asymmetry in order to identify why humans process information in different ways A must for anyone who wants to understand human cognitive nature further specifically the reasons why we are wired a certain way and whether these cortical circuits are flexible enough to be altered this book presents the most up to date information on hemispheric differences within normal and clinical populations Its focus on sex handedness and developmental differences is critical to the derivation of a better perspective on how future research should be conducted in this expanding science Iaccino begins by explaining basic brain structures and types of cognitive styles assigned to each hemisphere He then details studies involving various clinical populations psychophysiological split brain dyslexic and psychotic to support the claim that the two hemispheres are different morphologically and functionally speaking Applying this clinical research to the more normal population the author uncovers striking cortical variations between the sexes and between the handedness groups along with developmental changes which occur as a function of time Finally he provides a detailed summary of the previous chapters and highlights where asymmetrical research may be headed in the future

Wallace,2017-11-06 The need to know why as well as how children and youth respond as they do to reading instruction has guided the selection of this book s content The second edition of this title originally published in 1990 has retained and elaborated upon the three major themes previously presented that reading is a linguistic process that motivation the affective domain may be as important in learning to read as the cognitive domain and that the reality of learning theory is to be found in the mechanisms of the brain where information is mediated and memory traces are stored The text integrates views from cognitive psychology psycholinguistics and neuropsychology as they relate to reading and writing A learning motivation model is provided to present associative learning conceptualization and self directed reading in a hierarchical relationship with distinct cognitive and affective components The distinction between beginning and proficient reading is maintained throughout the text
