Readings In Modern Philosophy V1:

Women's Contemporary Readings of Medieval (and Modern) Arabic Philosophy Saloua Chatti, 2022-06-27 This book explores a large variety of topics involved in Arabic philosophy. It examines concepts and issues relating to logic and mathematics as well as metaphysics, ethics, and aesthetics. These topics are all studied by different Arabic philosophers and scientists from different periods ranging from the 9th century to the 20th century and are representative of the Arabic tradition. This is the first book dealing with the Arabic thought and philosophy and written only by women. The book brings together the work and contributions of an international group of female scholars and researchers specialized in the history of Arabic logic, philosophy, and mathematics. Although all authors are women, the book does not enter into any kind of feminist trend. It simply highlights the contributions of female scholars in order to make them available to the large community of researchers interested in Arabic philosophy and to bring to the fore the presence and representativeness of female scholars in the field.

Explorations in Ancient and Modern Philosophy: Volume 4 Myles Burnyeat, 2022-03-31 Myles Burnyeat 1939-2019 was a major figure in the study of ancient Greek philosophy during the last decades of the twentieth century and the first of this. After teaching positions in London and Cambridge where he became Laurence Professor in 1996, he took up a Senior Research Fellowship at All Souls College Oxford from which he retired in 2006. In 2012 he published two volumes collecting essays dating from before the move to Oxford. Two new posthumously published volumes bring together essays from his years at All Souls and his retirement. The essays in Volume 4 are addressed principally to scholars engaging first with fundamental issues in Platonic and Aristotelian metaphysics and epistemology and in Aristotle's philosophical psychology. Then follow studies tackling problems in interpreting the approaches to physics and cosmology taken by Plato and Aristotle and in assessing the evidence for early Greek exercises in optics.
