The Organization of Cities John R Miron, 2017-01-20 This book focuses on the relationship between the state and economy in the development of cities It reviews and reinterprets fundamental theoretical models that explain how the operation of markets in equilibrium shapes the scale and organization of the commercial city in a mixed market economy within a liberal state These models link markets for the factors of production markets for investment and fixed capital formation markets for transportation and markets for exports in equilibrium both within the urban economy and the rest of

the world In each case the model explains the urban economy by revealing how assumptions about causes and structures lead to predictions about scale and organization outcomes By simplifying and contrasting these models this book proposes another interpretation that governance and the urban economy are outcomes negotiated by political actors motivated by competing notions of commonwealth and the individual desire for wealth and power The book grounds its analysis in economic history explaining the rise of commercial cities and the emergence of the urban economy It then turns to factors of production export and factor markets introducing and parsing the Mills model breaking it down into its component parts and creating a series of simpler models that can better explain the significance of each economic assumption Simplified models are also presented for real estate and fixed capital investment markets transportation and land use planning The book concludes with a discussion of linear programming and the Herbert Stevens and the Ripper Varaiya models A fresh presentation of the theories behind urban economics this book emphasizes the links between state and economy and challenges the reader to see its theories in a new light As such this book will be of interest to scholars students and practitioners of economics public policy public administration urban policy and city and urban planning Urban Studies Prabhash P.
