**Röntgen Centennial** A. Haase, Gottfried Landwehr, Eberhard Umbach, 1997 To honour W C Röntgen and review the entire area of X ray development in the various fields of natural technical and life sciences his successors at the Physikalisches Institut of the Universität Würzburg organized a conference named Röntgen Centennial It took place at the new Physikalisches Institut not far from the historical site shortly before the actual 100th anniversary of the discovery Over forty renowned scientists were invited as representative speakers in the various subfields of X ray activities They reviewed the development gave examples and described the present status Most of them provided survey articles which are gathered in this book Since most X ray related activities are somehow represented an almost complete overview of the entire field is provided This book thus represents the enormous breadth of X ray activities and allows one to recognize the potential and quality of today's X ray research

both its own centennial and this remarkable century the APS has prepared a book highlighting the seminal discoveries of the 20th century with invited articles by the world's most eminent living physicists including 12 physics Nobel Prize winners. Included will be chapters by R Richardson on superfluidity, J Lebowitz on statistical mechanics, P deGennes on granular material, J Hopfield on neural networks, C Wieman on matter waves, A Pais on high energy physics in the early 20th century. The book will contain about 40 chapters on a broad range of topics in physics written in an engaging and personal style. While the technical level is high, these are not review articles but rather perspectives on discoveries written by those scientists most closely associated with the original work as well as future directions of research. The book will be promoted to the meeting attendees in advance of the March meeting and should be of interest to the broad scientific community. Ben Bederson, professor of physics at NYU, was editor in chief of the APS journals from 1986-1997. He is also editor of the *Advances in Atomic Physics* Series, Academic Press.

*The History of Radiology*, Adrian M. K. Thomas, Arpan K. Banerjee, 2013-05-09. In 1890 Professor Arthur Willis Goodspeed, a professor of physics at Pennsylvania USA, was working with an English-born photographer William N. Jennings when they accidentally produced an X-ray picture. Unfortunately, the significance of their findings was overlooked, and the formal discovery of X-rays was credited to Wilhelm Roentgen in 1895. The discovery has since transformed the practice of medicine, and over the course of the past 130 years, the development of new radiological techniques has continued to grow. The impact has been seen in virtually every hospital in the world, from the routine use of ultrasound for pregnancy scans through to the diagnosis of complex medical issues such as brain tumours. More subtly, X-rays were also used in the discovery of DNA and in military combat, and their social influence through popular culture can be seen in cartoons, books, movies, and art. Written by two radiologists who have a passion for the history of their field, *The History of Radiology* is a beautifully illustrated review of the remarkable developments within radiology and the scientists and pioneers who were involved. This engaging and authoritative history will appeal to a wide audience, including medical students studying for the Diploma in the History of Medicine of the Society of Apothecaries, DHMSA doctors, medical physicists, medical historians, and radiographers.

**Electron-Photon Interaction in Dense Media**, Helmut Wiedemann, 2012-12-06. A comprehensive survey of recent theoretical and experimental progress in the area of electron-photon interaction and dense media. A state-of-the-art discussion of radiation production with descriptions of new ideas and technologies that enhance the production of X-rays in the form of channelling, transition, and parametric X-ray production. Progress in electron beam physics to produce sub-picosecond electron bunches from low-energy linear accelerators makes it possible to produce coherent, high-brightness, submillimeter radiation and sub-picosecond X-ray pulses. Micro-undulators in the form of bent crystalline structures hold great promise as future X-ray sources.

*100 Plus* Sonia Arrison, 2011-08-23. Humanity is on the cusp of an exciting longevity revolution. The first person to live to 150 years has probably already been born. What will your life look like when you live to be over 100? Will you be healthy? Will your marriage need a sunset clause? How long will you have to work? Will you finish one career at sixty-five only to go back to school to learn a new one? And then will you be happily working for another sixty years? Maybe you'll be a parent to a newborn and a grandparent at the same time. Will the world become overpopulated? And how will living longer affect your finances, your family life and your views on religion and the afterlife? In *100 Plus*, futurist Sonia Arrison takes us on an eye-opening journey to the future at our doorsteps where science and technology are beginning to radically change life as we know it. She introduces us to the people transforming our lives: the brilliant scientists and genius inventors and the billionaires who fund their work. The astonishing advances to extend our lives and good health are almost here. In the very near future, fresh organs for transplants will be grown in laboratories, cloned stem cells will bring previously unstoppable diseases to their knees and living past 100 will be the rule, not the exception. Sonia Arrison brings over a decade of experience researching and writing about cutting-edge advances in science and technology to *100 Plus*, painting a vivid picture of a future that only recently seemed like science fiction but now is very real. *100 Plus* is the first book to give readers a comprehensive understanding of how life-extending discoveries will change our social and economic worlds. This illuminating and indispensable text will help us navigate the thrilling journey of life beyond 100 years.
