Roots Of Architectural Invention Site Enclosure Materials:

The Roots of Architectural Invention David Leatherbarrow, 1993 Site Enclosure and Materials in Architecture is a study in the history and theory of architecture Challenging the contemporary concentration on style it argues that site enclosure and materials are fundamental elements in sound architectural design Each of the chapters in this study reviews and criticises current assumptions and then provides an analysis of historical texts by such theoreticians as Perrault F L Wright and Le Corbusier in so far as they illuminate current thinking Considerable discussion is also devoted to significant buildings both modern and venerable that provide the basis for the author's argument Outlining typical thinking in architecture with reference to rhetoric and the art of memory Site Enclosure and Materials in Architecture defines architecture as a form of representation that is caught up in the temporal unfolding of human events Site and Composition Enis Aldallal, Husam AlWaer, Soumyen Bandyopadhyay, 2016-06-10 Site and Composition examines design strategies and tactics in site making It is concerned with the need for a renewed understanding of the site in the twenty first century and the need for a critical position regarding the continued tendency to view the site as an isolated fragment severed from its wider context The book argues revisiting the traditional instruments or means of both siting and composition in Architecture to explore their true potential in achieving connections between site and context Through the various examples studied here it is suggested that such instrumental means have the potential for achieving greater poetic outcomes. The book focuses on the works of twentieth century architects of wide ranging persuasion Peter Eisenman Le Corbusier Frank Lloyd Wright Alvaro Siza Herzog and de Meuron and Charles Correa for example who have strived in quite different ways to achieve deeper engagement with the physical qualities of place and context Departing from a reconsideration of the fragment Site and Composition emphasises the role of the positive fragment in achieving both historical continuity and renewed wholeness The potential of both planimetric and sectional compositional methods are explored emphasising the importance of reciprocity between inside and outside between fragment and the whole as well as materiality Written in a clear and accessible manner this book makes vital reading for both researchers and students of architecture and urbanism Architectural Projects of Marco Frascari Sam Ridgway, 2016-03-09 Marco Frascari believed that architects should design thoughtful buildings capable of inspiring their inhabitants to have pleasurable and happy lives A visionary Italian architect academic and theorist Frascari is best known for his extraordinary texts which explore the intellectual theoretical and practical substance of the architectural discipline As a student in Venice during the late 1960s Frascari was taught and mentored by Carlo Scarpa Later he moved to North America with his family where he became a fulltime academic Throughout his academic career he continued to work on numerous architectural projects including exhibitions competition entries and designs for approximately 35 buildings a small number of which were built As a means of re constructing the theatre of imaginative theory within which these buildings were created Sam Ridgway draws on a wide selection of Frascari s texts including his

richly poetic book Monsters of Architecture to explore the themes of representation demonstration and anthropomorphism Three of Frascari's delightful buildings are then brought to light and interpreted revealing a sophisticated and interwoven relationship between texts and buildings Women, Modernity, and Landscape Architecture Sonja Dümpelmann, John Beardsley, 2015-02-11 Modernity was critically important to the formation and evolution of landscape architecture yet its histories in the discipline are still being written This book looks closely at the work and influences of some of the least studied figures of the era established and less well known female landscape architects who pursued modernist ideals in their designs The women discussed in this volume belong to the pioneering first two generations of professional landscape architects and were outstanding in the field They not only developed notable practices but some also became leaders in landscape architectural education as the first professors in the discipline or prolific lecturers and authors As early professionals who navigated the world of a male dominated intellectual and menial work force they were exponents of modernity In addition many personalities discussed in this volume were either figures of transition between tradition and modernism like Silvia Crowe Maria Teresa Parpagliolo or they fully embraced and furthered the modernist agenda like Rosa Kliass Cornelia Oberlander The chapters offer new perspectives and contribute to the development of a more balanced and integrated landscape architectural historiography of the twentieth century Contributions come from practitioners and academics who discuss women based in USA Canada Brazil New Zealand South Africa the former USSR Sweden Britain Germany Austria France and Italy Ideal reading for those studying landscape history women's studies and cultural geography

Experiencing Architecture in the Nineteenth Century Edward Gillin,H. Horatio Joyce,2018-10-18 Bringing together fourteen original essays this collection opens up new perspectives on the architectural history of the nineteenth century by examining the buildings of the period through the lens of experience With a focus on the experience of the ordinary building user rather than simply on the intentions of the designer the book shows that new and important insights can be brought to our understanding of Victorian architecture The chapters present a range of ideas and new research some examining individual building case studies from grand hotels and clubhouses in New York to the parliament buildings of Westminster and others exploring conceptual questions about the nature of architectural experience whether sensory or otherwise Yet they share the premise that the idea of the experience of architecture took on a new and particular significance with the rise of industrial modernity and they examine what contemporary people both architects and non architects understood by this idea The insights in this volume extend beyond the study of Victorian architecture Together they suggest how experience might be used as a framework to produce a more convincingly historical account of the artefacts of architectural history

Architecture as the Ethics of Climate Jin Baek, 2016-06-10 At a time when climate and ethics have become so important to architectural debate this book proposes an entirely new way for architects to engage with these core issues Drawing on Tetsuro Watsuji s 1889 1960 philosophy the book illuminates climate not as a collection of objective natural

phenomena but as a concrete form of bond in which who we are the subjective human experience is indivisibly intertwined with the natural phenomena The book further elucidates the inter personal nature of climatic experiences criticizing a view that sees atmospheric effects of climate under the guise of personal experientialism and reinforcing the linkage between climate and ethos as the appropriateness of a setting for human affairs This ethical premise of climate stretches the horizon of sustainability as pertaining not only to man s solitary relationship with natural phenomena a predominant trend in contemporary discourse of sustainability but also to man's relationship with man Overcoming climatic determinism regional determinism too and expanding the ethics of the interpersonal to the level where the whole and particulars are joined through the dialectics of the mutually negating opposites Jin Baek develops a new thesis engaging with the very urgent issues inherent in sustainable architecture Crucially the book explores examples that join climate and the dynamics of the inter personal including Japanese vernacular residential architecture the white residential architecture of Richard Neutra contemporary architectural works and urban artifacts by Tadao Ando and Aldo Rossi Beautifully illustrated this book is an important contribution to the discourse which surrounds architecture climate and ethics and encourages the reader to think more broadly about how to respond to the current challenges facing the profession Building Time David Leatherbarrow, 2020-11-26 While most books on architecture concentrate on spatial themes this book explores architecture s temporal dimensions Through a series of close readings of buildings both contemporary and classic it demonstrates the centrality of time in modern architecture and shows why an understanding of time is critical to understanding good architecture All buildings exist in time Even if designed for permanence they change slowly but inevitably They change use they accrue history and meaning they decay all of these processes are inscribed in time So too is the path traced by the sun through a building and the movements of the human body from room to room Time this book argues is the framework for our spatial experience of architecture and a key dimension of a building s structure and significance Building Time presents twelve close readings of buildings and artworks which explore this idea Examining works by distinctive modern architects from Eileen Gray to Ivaro Siza and Wang Shu it takes the reader in some cases literally step by step through a built work and provides insightful reflections on the importance of making space for time in architectural design This is a book for both theorists and for architectural designers Through it theorists will find a way to rethink the fundamental premises and aims of design work while designers will rediscover the order and ideas that shape the world around them its buildings interiors and landscapes The Glass State Annette Fierro, 2003 From the Gothic to the contemporary glass has transformed the structural formal and philosophical principles of artchitecture In The Glass State Annette Fierro views the many meanings of transparency in architecture Specifically she analyzes the transparent monumental buildings that were built in Paris between 1981 and 1988 as part of Francois Mitterand's program of Grands Projets The Grands Projets provide a rare opportunity to study a finite set of buildings constructed of similar materials in the same time period in a specific urban landscape and with

related ideological missions Constructing Place Sarah Menin, 2004-02-24 This book is a cutting edge study examining the attitudes to both nature and the built environment of the designer the client and the society in which an intervention be it architecture landscape design or a piece of art is made The legacy of the Modernist view of nature and the environment is also addressed and the degree to which such ideas continue to impinge on contemporary interventions is assessed Surface and Place Peta Carlin, 2018-03-21 On Surface and Place is a rich and poetic exploration of surfaces which foregrounds their significance in our understanding and experience of place Adopting weaving as its overarching metaphor it departs from Gottfried Semper's discussion of correspondences between architecture and textiles and emerges from the reading of photographs a swatch of Harris Tweed and curtain wall fa ade juxtaposed In juxtaposing the fabric of the city with the weave of Harris Tweed the book charts an original course across a range of connected ideas and questions combining many different themes writers and disciplines It presents integrated and innovative rethinkings on a number of fundamental relationships including correlations between body and building word and image and between the rural and the metropolitan and the hand crafted and the mass reproduced In doing so it seeks to foreground the very interrelationship of surface and Architecture and its Ethical Dilemmas place as it makes a claim for the relational nature of the world in which we live Nicholas Ray, 2007-05-07 A cast of leading writers and practitioners tackle the ethical questions that architects are increasingly facing in their work from practical considerations in construction to the wider social context of buildings their appearance use and place in the narrative of the environment This book gives an account of these ethical questions from the perspectives of historical architectural practice philosophy and business and examines the implications of such dilemmas Taking the current discussion of ethics in architecture on to a new stage this volume provides an accumulation of diverse opinions focusing on architects actions and products that materially affect the lives of people in all urbanized societies

Introducing Architectural Theory Korydon Smith, Miguel Guitart, 2024-01-22 Building on the success of the first edition an engaging and reader friendly work on complex ideas Introducing Architectural Theory Expanding the Disciplinary Debate broadens the range of themes voices and geographies represented to provide a more comprehensive and contemporary theory book This book presents major discourses in architectural theory and design in a debate like format integrating a series of edited texts across architectural history with context and newly written commentaries by the authors This new edition has been fully revised updated and expanded to include long standing debates such as simplicity vs complexity or the relationship between form and function as well as newer discussions on innovation globalization and social equity Authors Smith and Guitart provide a comprehensive means and conceptual framework for readers to compare multiple points of view The chapter structure discussion questions and additional resources allow teachers to facilitate in class discussions and writing assignments This book remains the most accessible architectural theory textbook written for beginning architecture students and those outside the discipline Its reflective and critical approach will equally engage the minds of upper level students and experts **Unexpected Affinities** Pablo Meninato, 2018-05-23 While the concept of type has been present in architectural discourse since its formal introduction at the end of the eighteenth century its role in the development of architectural projects has not been comprehensively analyzed This book proposes a reassessment of architectural type throughout history and its impact on the development of architectural theory and practice Beginning with Laugier s 1753 Essay on Architecture Unexpected Affinities The History of Type in the Architectural Project from Laugier to Duchamp traces

type through nineteenth and twentiethth century architectural movements and thoeries culminating in a discussion of the affinities between architectural type and Duchamp's concept of the readymade Includes over sixty black and white images

Architecture as Communication Ross A. Eaman, 2025-04-08 Media theory has long overlooked the built environment and its communicative capacity how built structures and spaces convey meaning through material embodiment and symbolization Architecture as Communication advances the idea that built environments function as media of communication Using practice theory in conjunction with the concept of style this book is anchored in three historical determinants the quest for perfect proportion in buildings the belief in architectural determinism and the ongoing efforts within other media to influence how those who experience built environments understand them Ross Eaman explores how houses schools places of worship factories office buildings stores malls opera houses plazas and parks have meaning for people as subjective life worlds Architecture as Communication proposes media theory that articulates the social construction of meaning as a unique way of understanding the built environment one in which the users and observers of structures and spaces participate along with architects and designers Architecture according to Eaman encompasses the multiplicity of communication as human interaction preparing people for what they are about to encounter signalling how they should act and selectively enabling them to perform their expected role Using examples across many historical periods and cultures Architecture as Communication argues that we judge our built environments by the values they communicate Goffi, 2019-12-05 With the continued growth of PhD programs in architecture and the simultaneous broadening of approaches InterVIEWS Insights and Introspection on Doctoral Research in Architecture begins a timely survey into contemporary research at academic institutions internationally in the context of the expanding landscape of architectural inquiry The eighteen interviews with scholars who direct or contributed to doctoral research programs in areas of architecture history and theory theory and criticism design research urban studies cross disciplinary research and practice based research expose a plurality of positions articulating a range of research tactics Renowned scholars narrated the stories the experiences and the research that shaped and are shaping doctoral education worldwide providing an invaluable knowledge resource from which readers may find inspiration for their work InterVIEWS acknowledges the diversity in approaches to research to evidence meaningful differences and the range of contributions in academic institutions. The relevance of this self reflection becomes apparent in the exposition of vibrant and at times divergent viewpoints that offer a thought provoking opportunity to consider the openness and breadth of a field that is unrelenting in redefining its boundaries along with the Reading Architecture and Culture Adam Sharr, 2012 Architecture displays the values involved in its probing questions inhabitation construction procurement and design It traces the thinking of the individuals who have participated in it their relationships and their involvement in the cultures where they lived and worked In this way buildings their details and the documents used to make them can be read closely for cultural insights Introducing the idea of reading buildings as cultural

artefacts this book presents perceptive readings by eminent writers which demonstrate the power of this approach The chapters show that close readings of architecture and its materials can test commonplace assumptions help architects to appreciate the contexts in which they work and indicate ways to think more astutely about design The readings collected in this innovative and accessible book address buildings specifications and photographs They range in time from the fifteenth century examining the only surviving drawing made by Leon Battista Alberti to the recent past projects completed by Norman Foster in 2006 and Herzog and De Meuron in 2008 They range geographically from France to Puerto Rico to Kazakhstan and they range in fame from buildings celebrated by critics to house extensions and motorway service areas Taken together these essays demonstrate important research methods which yield powerful insights for designers critics and historians and lessons for students Phenomenologies of the City Henriette Steiner, Maximilian Sternberg, 2016-03-09 Phenomenologies of the City Studies in the History and Philosophy of Architecture brings architecture and urbanism into dialogue with phenomenology Phenomenology has informed debate about the city from social sciences to cultural studies Within architecture however phenomenological inquiry has been neglecting the question of the city Addressing this lacuna this book suggests that the city presents not only the richest but also the politically most urgent horizon of reference for philosophical reflection on the cultural and ethical dimensions of architecture The contributors to this volume are architects and scholars of urbanism Some have backgrounds in literature history religious studies and art history The book features 16 chapters by younger scholars as well as established thinkers including Peter Carl David Leatherbarrow Alberto P rez Gomez Wendy Pullan and Dalibor Vesely Rather than developing a single theoretical statement the book addresses architecture s relationship with the city in a wide range of historical and contemporary contexts The chapters trace hidden genealogies and explore the ruptures as much as the persistence of recurrent cultural motifs Together these interconnected phenomenologies of the city raise simple but fundamental questions What is the city for how is it ordered and how can it be understood The book does not advocate a return to a naive sense of unity or order Rather it investigates how architecture can generate meaning and forge as well as contest social and cultural representations **The Material Imagination** Matthew Mindrup, 2016-03-03 In recent years architectural discourse has witnessed a renewed interest in materiality under the quise of such familiar tropes as material honesty form finding or digital materiality Motivated in part by the development of new materials and an increasing integration of designers in fabricating architecture a proliferation of recent publications from both practice and academia explore the pragmatics of materiality and its role as a protagonist of architectural form Yet as the ethos of material pragmatism gains more popularity theorizations about the poetic imagination of architecture continue to recede Compared to an emphasis on the design of visual form in architectural practice the material imagination is employed when the architect thinks matter dreams in it lives in it or in other words materializes the imaginary As an alternative to a formal approach in architectural design this book challenges readers to rethink the reverie of materials in architecture

through an examination of historical precedent architectural practice literary sources philosophical analyses and everyday experience Focusing on matter as the premise of an architect s imagination each chapter identifies and graphically illustrates how material imagination defines the conceptual premises for making architecture
