Loss of Biodiversity Sharon L. Spray, Karen Leah McGlothlin, 2003 Loss of Biodiversity introduces readers to the important concepts for understanding the environmental challenges and consequences of the declining diversity of life on the planet Contributions from scientists and academics in the social sciences and humanities provide readers with an initial tool kit for understanding the concepts central to their disciplinary perspective and the multi dimensional aspects of the loss of biodiversity

Loss of Biodiversity Rachael Hames, 2017-12-15 Biodiversity is the foundation for maintaining the balance between all living things When species begin dying out it upsets this delicate balance and can cause ecological tragedies Earth's rainforests are homes to vast biodiversity However the rainforests are also one of Earth's most threatened habitats There animals risk losing their homes through pollution and deforestation The information presented in this book highlights at risk animal and plant species and discusses ways readers can lessen their carbon footprint Colorful photographs of animals and habitats transport readers to distant locations where biodiversity takes center stage

Biodiversity Loss Charles Perrings, 1997-01-28 This volume reports key findings of the Biodiversity Program of the Royal Swedish Academy of Sciences Beijer Institute The program brought together a number of eminent ecologists and economists to consider the nature and significance of the biodiversity problem In encouraging collaborative work between these closely related disciplines it sought to shed new light on the concept of diversity the implications of biological diversity for the functioning of ecosystems the driving forces behind biodiversity loss and the options for promoting biodiversity conservation The results of the program are surprising It is shown that the core of the biodiversity problem is a loss of ecosystem resilience and the insurance it provides against the uncertain environmental effects of economic and population growth This is as much a local as a global problem implying that biodiversity conservation offers benefits that are as much local as global The solutions as well as the causes of biodiversity loss lie in incentives to local users

Cascading Consequences: Unraveling Biodiversity Loss Warren Peters, In this eye opening book readers are taken on a thought provoking journey through the intricate connections between the natural world and human societies Delving

deep into the consequences of biodiversity loss the author unravels the complex web of interactions that shape our planet and ultimately affect our well being The first section of the book sets the stage by shedding light on the importance of biodiversity in maintaining a functioning ecosystem Through compelling narratives and insightful examples the author explores the irreplaceable roles played by various species in sustaining ecological health From pollinators that enable the growth of our food to decomposers that recycle vital nutrients every organism contributes to the delicate balance of life on Earth Building upon this foundation the second section moves on to investigate the cascading impacts of biodiversity loss on human societies Through well researched case studies from different regions and cultures the author highlights the far reaching consequences of diminishing wildlife and ecosystems The unraveling of habitats disrupts ecological services that communities depend on such as water purification soil fertility and natural disaster mitigation Drawing attention to the profound interdependencies between nature and people the book proceeds to explore the rippling effects that reverberate throughout society From economic and political ramifications to social and cultural disruptions biodiversity loss infiltrates every aspect of human life As species vanish and ecosystems crumble livelihoods are threatened displacements occur and conflicts arise putting human well being on a treacherous path However amidst these gloomy reverberations the final portion of the book unveils rays of hope Employing innovative solutions and inspiring success stories the author showcases approaches to mitigate the impact of biodiversity loss and foster a sustainable future Through conservation endeavors ecological restoration and collective efforts it becomes clear that positive change is within our reach Engagingly written well researched and complemented by striking visuals and informative graphics this book provides readers with profound insights into the massive transformation occurring in our interconnected world The Ripple Effect forces us to confront the urgency of preserving biodiversity and challenges us to find harmony between human societies and the natural world before the ripples turn into irreparable waves

global concern Research has shown that both the diversity and the identity of the various species have a fundamental influence on the magnitude and stability of the ecological processes that occur at the ecosystem level There are significant interrelationships between the degradation of ecosystems the loss of animal and plant species market globalisation and poverty Europe s high per capita consumption and waste production means that its impact on ecosystems is felt well beyond its own borders Biodiversity loss is inextricably linked to the degradation of the ecosystem services described by the 2005 Millennium Ecosystem Assessment

Biodiversity and Conservation: Causes and consequences of biodiversity loss 2 : pollution, climate change and unsustainable exploitation Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word s first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University s Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates

Paradise Lost? Edward B. Barbier, Joanne C. Burgess Barbier, Carl Folke, 2019-09-18 Originally published in 1994 Paradise Lost is the outcome of a unique collaboration between economists and ecologists initiated by the Beijer Institute of the Royal Swedish Academy of Sciences The book examines how the loss of biodiversity is one of the most serious problems the world faces and suggests that new interdisciplinary thinking is required to safeguard both us and the biosphere from the effects of species extinction The book examines how an integrated interdisciplinary approach to the conservation of biodiversity can understand and tackle the issue It provides an overview of the causes of the problem and examines previous approaches to dealing with it The book also addresses how the loss of biodiversity affects natural systems and provides an examination of environmental policy while discussing how this has been affected by the ecological limits to economic activity

This book will be of interest to both academics and students of environmental sciences economics and politics

Biodiversity and Ecosystem Insecurity Ahmed Djoghla, Felix Dodds, 2017-09-25 Biodiversity and Ecosystem Insecurity provides an authoritative and comprehensive assessment of the threats presented to human security and well being by the loss of ecosystems and biodiversity recently confirmed as one of the critical planetary boundaries that has already been exceeded Contributors examine the current trends and state of biodiversity globally the drivers of biodiversity loss including climate change and economic and population pressures and the mechanisms and policies needed for conserving and restoring biodiversity in the future Strong emphasis is placed throughout on the fundamental importance of placing a realistic economic value on nature and the services that ecosystems provide if we are to manage our natural resources successfully and also on the crucial role of international institutions and government policies achieving this goal As the recent high profile meeting of the Convention on Biological Diversity in Nagoya Japan underlined the scale and pace of the destruction of natural habitats and species imperil us all This volume is an invaluable resource for conservationists students and those in the private and public sectors concerned to redress the damage being done to the natural world Biodiversity

Loss in the 21st Century Neil Griffin, 2015-03-14 This book provides an overview of current knowledge and discusses some of the unanswered questions at the forefront of research in biodiversity Every ecosystem is an intricate organization of cautiously mixed life forms a dynamic and primarily sensible system Hence their progressive decline may speed up climate change and vice versa influencing flora and fauna composition and distribution resulting in the loss of biodiversity The effects of climate change are the primary issues covered in this book It presents varied case studies focused on biodiversity evaluations and necessities in several ecosystems analyzing the current life situation of many life forms and covering various biogeographic zones of the world **Biodiversity and Conservation: Response to biodiversity loss** Richard J.

C. A. Perrings, 2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science s Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries l This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use **Biodiversity Loss in a**
