Lower Palaeozoic Of The Middle East Eastern And Southern Africa And Antarctica:

Lower Palaeozoic of the Middle East, Eastern and Southern Africa, and Antarctica Charles Hepworth Holland, 1981 **Geological Evolution of Antarctica** Michael Robert Alexander Thomson, J. Alistair Crame, Janet W. Thomson, 1991-05-16 Surveys the tectonic evolution of the Antarctic crust and the palaeoenvironmental evolution of Antarctica since the Late Mesozoic **Geological Exploration in Murzuq Basin** D. Worsley, 2000-12-19 The Murzuq Basin is a large intracratonic sag basin located in southwestern Libya Exploration efforts started in this vast and remote Saharan region already in 1957 and 60 exploratory wells have been drilled to date resulting in over 20 discoveries with around 4 000 million barrels of oil in place Most discoveries have been made in Ordovician sandstone reservoirs sourced by hot shales of the Lower Silurian Tanezzuft Formation Oil is already being produced and exported from the area but the basin's total hydrocarbon potential is still poorly understood Recent exploration especially the major discovery and initial development of the Giant Elephant Field has greatly increased interest for the area's potential Many petroleum geologists and companies now believe that the basin may well develop into a new major hydrocarbon province which will significantly contribute to Europe's energy needs in the next decades This book presents papers from a conference held at Sebha University on the eastern margins of the Murzuq Basin in September 1998 The book continues an ongoing series of presentations of the geology of Libya but the 25 contributions herein mostly centre on the Murzuq Basin itself and on nearby areas There are still many unresolved questions in terms of geological and hydrocarbon exploration in these difficult desert areas but the papers herein will hopefully present a first comprehensive overview of an exciting frontier exploration region About half of the papers are directly related to hydrocarbon exploration and to source rock and reservoir development but a wide variety of other features are also described ranging from palaeontology and biostratigraphy to ore geology and water resources covering the entire geological column from the Precambrian to the Holocene The book concludes with a bibliography covering all geological aspects of this challenging but very promising frontier area **Antarctic Marine Geology** J. B. Anderson, 1999-09-28 A comprehensive single authored book to introduce students and researchers to the marine geology of the Antarctic Antarctic Journal of the United States, 1988 The Ross Orogen of the Transantarctic Mountains Edmund Stump, 1995-03-31 The Ross Orogen of the Transantarctic Mountains is the part of the orogenic system that formed at the Pacific continental margin of present day Antarctica According to a recent hypothesis this continental margin was created by the rifting and subsequent drift of Laurentia from Gondwana With an unparalleled breadth and depth of information this book provides a detailed synthesis of the history of the Ross orogen In doing so it incorporates classical studies with discussions of the most recent and controversial research from the international community The book also includes a comprehensive bibliography and a historical chronology of all expeditions that have worked on the Ross orogen in the Transantarctic Mountains from the first sightings by Ross in 1840 right up to the present day This review of the Ross orogen

of the Transantarctic Mountains will be valuable to all geologists interested in these episodes in the Earth's history and to researchers of the geology of Antarctica **Journal of the Royal Society of New Zealand**, 1981-12 New Zealand Journal of Geology and Geophysics, 1958-02 Geological Atlas of Africa Thomas Schlüter, 2008-04-19 This atlas is intended primarily for anybody who is in some background for the arrangement of how the terrestrial basic geology of Africa. Its originality lies in that the atlas was done. The second chapter is devoted to the fact that the regional geology of each African history of geological mapping in Africa necessary nation or territory is reviewed country wise by maps for a fuller appreciation of why this work in Africa is and text a view normally not presented in textbooks worth doing Chapter 3 provides an executive summary of regional geology. It is my belief that there has long been a need on the stratigraphy and tectonics of Africa as there has been a need in universities and geological surveys worldwide in the context of no political boundaries both in Africa and in the developed world for summary. The main part of the atlas lies in Chapter 4 where in summarizing geological maps and an accompanying basic alphabetical order each African country or territory text utilising the enormous fund of knowledge that is presented by a digitized geological overview map has been accumulated since the beginning of geological and an accompanying text on its respective stratigraphical research in Africa in the mid 19th century. I hope that the tectonics, economic geology, geohazards and that in part the present atlas may satisfy this need. Geosites. A short list of relevant references is also added.

Early Palaeozoic Biogeography and Palaeogeography D.A.T. Harper, T. Servais, 2014-01-27 The Early Palaeozoic was a critical interval in the evolution of marine life on our planet. Through a window of some 120 million years the Cambrian Explosion, Great Ordovician Biodiversification Event, End Ordovician Extinction and the subsequent Silurian Recovery established a steep trajectory of increasing marine biodiversity that started in the Late Proterozoic and continued into the Devonian. Biogeography is a key property of virtually all organisms; their distributional ranges mapped out on a mosaic of changing palaeogeography have played important roles in modulating the diversity and evolution of marine life. This Memoir first introduces the content, some of the concepts involved in describing and interpreting palaeobiogeography and the changing Early Palaeozoic geography is illustrated through a series of time slices. The subsequent 26 chapters compiled by some 130 authors from over 20 countries describe and analyse distributional and in many cases diversity data for all the major biotic groups plotted on current palaeogeographic maps. Nearly a quarter of a century after the publication of the Green Book Geological Society London Memoir 12 edited by McKerrow and Scotese improved stratigraphic and taxonomic data together with more accurate digitized palaeogeographic maps have confirmed the central role of palaeobiogeography in understanding the evolution of Early Palaeozoic ecosystems and their biotas. *Origin and Early Evolution of the Metazoa* Jere H. Lipps, Philip W. Signor, 2013-11-21 Several years ago we realized that the most prominent ideas that had been expressed about the origin and early evolution of the Metazoa seemed to have been developed chiefly by zoologists using evidence from modern species without reference to the fossil record. Paleontologists had in fact put forth their own ideas but

the zoological and the paleontological evidence were about the problem seldom considered together especially by zoologists We believed that the paleontological documentation of the first Metazoa was too scattered too obscure to Western readers and much of it too recent to have been readily available to our colleagues in zoology Whether or not that was entirely true we thought that a single volume reviewing the fossil record of the earliest Metazoa would be useful to many in both paleontology and zoology especially since so much new information has been developed in the last few years Some of this information has been summarized in general articles recently but an overview of most of the field does not exist We therefore organized this book in five parts so that the evidence could be placed in perspective and summarized and inferences made from it Part I introduces the previous hypotheses that have been proposed for the origin and early radiation of Metazoa Part II consists of two summary chapters that set the sedimentological geochemical and biological background to the known radiations of Metazoa

The Formation and Evolution of Africa Douwe J. J. van Hinsbergen, 2011 The African continent preserves a long geological record that covers almost 75% of Earth's history The Pan African orogeny c 600 500 Ma brought together old continental kernels West Africa Congo Kalahari and Tanzania to form Gondwana and subsequently the supercontinent Pangaea by the late Palaeozoic The break up of Pangaea since the Jurassic and Cretaceous primarily through opening of the Central Atlantic Indian and South Atlantic oceans in combination with the complicated subduction history to the north gradually shaped the African continent This volume contains 18 contributions that discuss the geology of Africa from the Archaean to the present day

Global Neoproterozoic Petroleum Systems Jonathan Craig, 2009 Worldwide Neoproterozoic successions are major hydrocarbon producers In North Africa large basins with significant surface outcrops and thick sedimentary fills are widespread These basins are now emerging as potential sources of hydrocarbons and are attracting interest both from geological researchers and the oil and gas industry This volume focuses on recent developments in the understanding and correlation of North African basin fills and explores novel approaches to prospecting for source and reservoir rocks The papers cover aspects of petroleum prospectivity and age equivalent global petroleum systems Neoproterozoic tectonics and palaeogeography sequence stratigraphy glacial events and global climatic models faunal and floral evolution and the deposition of early source rocks The broader aim is to compare with and learn from well studied Neoproterozoic successions globally including major environmental change the emergence of life the global carbon cycle and implications for hydrocarbon exploration

Lebanon C. H. Bleaney, 1991 *Tectonic Evolution, Collision, and Seismicity of Southwest Asia* Rasoul Sorkhabi, 2017-12-21 Southwest Asia is one of the most remarkable regions on Earth in terms of active faulting and folding large magnitude earthquakes volcanic landscapes petroliferous foreland basins historical civilizations as well as geologic outcrops that display the protracted and complex 540 m.y. stratigraphic record of Earth's Phanerozoic Era Emerged from the birth and demise of the Paleo Tethys and Neo Tethys oceans southwest Asia is currently the locus of ongoing tectonic collision between the Eurasia Arabia continental plates The region is characterized by the high plateaus of

Iran and Anatolia fringed by the lofty ranges of Zagros Alborz Caucasus Taurus and Pontic mountains the region also includes the strategic marine domains of the Persian Gulf Gulf of Oman Caspian and Mediterranean This 19 chapter volume published in honor of Manuel Berberian a preeminent geologist from the region brings together a wealth of new data analyses and frontier research on the geologic evolution collisional tectonics active deformation and historical and modern seismicity of key areas in southwest Asia

Applications of Palaeontology Robert Wynn Jones, 2011-08-18 Palaeontology the scientific study of fossils has developed from a descriptive science to an analytical science used to interpret relationships between Earth and life history This book provides a comprehensive and thematic treatment of applied palaeontology covering the use of fossils in the ordering of rocks in time and in space in biostratigraphy palaeobiology and sequence stratigraphy Robert Wynn Jones presents a practical workflow for applied palaeontology including sample acquisition preparation and analysis and interpretation and integration He then presents numerous case studies that demonstrate the applicability and value of the subject to areas such as petroleum mineral and coal exploration and exploitation engineering geology and environmental science Specialist applications outside of the geosciences including archaeology forensic science medical palynology entomopalynology and melissopalynology are also addressed Abundantly illustrated and referenced Applications of Palaeontology provides a user friendly reference for academic researchers and professionals across a range of disciplines and industry settings
