Creating Outdoor Classrooms Lauri Macmillan Johnson, Kim Duffek, 2010-01-01 Schoolyards have come a long way from the barren playgrounds that many people remember. Today's school campuses often feature gardens in which students can learn about native plants and wildlife, grow vegetables and fruit, explore cultural traditions, practice reading and math skills, and use their imaginations to create fun play spaces. And for a growing number of urban students, these schoolyard gardens offer the best, if not the only, opportunity to experience the natural world firsthand and enjoy its many benefits. This book is a practical, hands-on guide for creating a variety of learning environments in the arid Southwest. Filled with clear, easy-to-use information and illustrated with photographs, drawings, and plans, the book covers everything necessary to create schoolyard gardens. An introduction to schoolyards as outdoor classrooms and several types of habitats, including art gardens, cultural history gardens, ecological gardens, literacy gardens, and vegetable gardens. Design theory, including a history of garden styles and design principles and design elements. Beginning the design process, including identifying participants and writing a design program that sets out goals and requirements. Conducting site research and synthesizing design elements to arrive at a final design. Design essentials, including project funding and design features, maintenance, accessibility, safety, and project evaluation and revision. Wildlife ecology, including elements needed for survival, such as food and shelter. Creating gardens for pollinators and other wildlife, including hummingbirds, butterflies, bees, moths, bats, and flies, as well as pest control. Lists of native plants for various kinds of habitats and nurseries that sell native plants, as well as books, web sites, and other resources for learning more about native plants and wildlife. This guide will be essential for landscape architects, school personnel, parents, and students. Indeed, its principles can be used in designing schoolyard habitats across the country, while its information on gardening with native plants and wildlife will be useful to homeowners across the Southwest.

Plants and Landscapes for Summer-dry Climates of the San Francisco Bay Region Nora Harlow, 2004 Gardening Environmental Studies. Photographs by Saxon Holt. Illustrations by Richard Pembroke. This lavishly illustrated book celebrates the challenges and opportunities of gardening in Mediterranean climates, with special reference to northern California's San Francisco Bay Region. The core of the book is a catalog of more than 650 plants suited to regions with mild, usually wet winters and dry, often hot summers. These plants thrive with moderate to no summer irrigation when established, require little or no maintenance, and are reasonably available from nurseries, botanic gardens, native plant sales, or specialty seed suppliers. Many of the 542 color photographs show plants in garden settings to suggest attractive and compatible plant combinations. Summary charts provide information on each plant, such as bloom time, needs for water and sun, and preferences for coastal or inland microclimates. Lists suggest plants for special situations, such as hot sites, dryish shade, small gardens, and clay soils. Chapters on landscape design and maintenance inspire readers to make gardens that use little water and no harmful chemicals, with a focus on building healthy soil. Practical steps to successful design are supplemented with ideas for designing with microclimate.
