Magnetic Reconnection:

Magnetic Reconnection Masaaki Yamada, 2022-04-19 The essential introduction to magnetic reconnection written by a leading pioneer of the field Plasmas comprise more than 99 percent of the visible universe and wherever plasmas are magnetic reconnection occurs In this common yet incompletely understood physical process oppositely directed magnetic fields in a plasma meet break and then reconnect converting the huge amounts of energy stored in magnetic fields into kinetic and thermal energy In *Magnetic Reconnection* Masaaki Yamada offers an illuminating synthesis of modern research and advances on this important topic Magnetic reconnection produces such phenomena as solar flares and the northern lights and occurs in nuclear fusion devices A better understanding of this crucial cosmic activity is essential to comprehending the universe and varied technological applications such as satellite communications Most of our knowledge of magnetic reconnection comes from theoretical and computational models and laboratory experiments but space missions launched in recent years have added up close observation and measurements to researchers tools Describing the fundamental physics of magnetic reconnection Yamada links the theory with the latest results from laboratory experiments and space based observations including the Magnetic Reconnection Experiment MRX and the Magnetospheric Multiscale MMS Mission He concludes by considering outstanding problems and laying out a road map for future research Aimed at advanced graduate students and researchers in plasma astrophysics solar physics and space physics *Magnetic Reconnection* provides cutting edge information on a vital area of scientific investigation

Magnetic Reconnection Walter Gonzalez, Eugene Parker, 2016 This book provides an overview of recent research highlights in the main areas of application of magnetic reconnection MR including planetary solar and magnetospheric physics and astrophysics It describes how research on magnetic reconnection especially concerning the Earth's magnetosphere has grown extensively due to dedicated observations from major satellite missions such as Cluster Double Star and Themis The accumulated observations from these missions are being supplemented by many theoretical and modelling efforts for which large scale computer facilities are successfully being used and the theoretical advances are also covered in detail Opening with an introductory discussion of some fundamental issues related to magnetic reconnection subsequent chapters address topics including collisionless magnetic reconnection MHD structures in 3D reconnection energy conversion processes fast reconnection mediated by plasmoids rapid reconnection and magnetic field topology Further chapters consider specific areas of application such as magnetospheric dayside and tail reconnection comparative reconnection in planetary systems and reconnection in astrophysical systems The book offers insight into discussions about fundamental concepts and key aspects of MR access to the full set of applications of MR as presently known in space physics and in astrophysics and an introduction to a new related area of study dealing with the annihilation of quantum magnetic fluxes and its implications in the study on neutron star activity The book is aimed primarily at students entering the field but will also serve as a useful reference text for

established scientists and senior researchers Magnetic Reconnection William Lewis,2014-02-23 This volume covers different aspects of recent theoretical and observational work on magnetic reconnection a fundamental plasma physical process by which energy stored in magnetic field is converted often explosively into heat and kinetic energy This collection of papers from the fields of solar and space physics astrophysics and laboratory plasma physics is especially timely in view of NASA s upcoming Magnetospheric Multiscale mission which will use Earth s magnetosphere as a laboratory to test through in situ measurement of the plasma energetic particles and electric and magnetic fields the various and sometimes competing models and theories of magnetic reconnection This volume is aimed at researchers in solar physics magnetospheric physics and plasma physics Previously published in Space Science Reviews journal Vol 160 1 4 2011 *Reconnection of Magnetic Fields* J. Birn,E. R. Priest,2007-01-04 The reconnection of magnetic fields is one of the most fascinating processes in plasma physics responsible for phenomena such as solar flares and magnetospheric substorms The concept of reconnection has developed through recent advances in exploring the magnetospheres of the Sun and Earth through theory computer simulations and spacecraft observations The great challenge in understanding it stems from balancing the large volumes of plasma and magnetic fields involved with the energy release with the physical mechanism which relies on the strongly localized behavior of charged particles This book edited by and with contributions from leading scientists in the field provides a comprehensive overview of recent theoretical and observational findings concerning the physics of reconnection and the complex structures that may give rise to or develop from reconnection It is intended for researchers and graduate students interested in the dynamics of plasmas **Magnetic Reconnection** William Lewis,2012-03-18 This volume covers different aspects of recent theoretical and observational work on magnetic reconnection a fundamental plasma physical process by which energy stored in magnetic field is converted often explosively into heat and kinetic energy This collection of papers from the fields of solar and space physics astrophysics and laboratory plasma physics is especially timely in view of NASA s upcoming Magnetospheric Multiscale mission which will use Earth s magnetosphere as a laboratory to test through in situ measurement of the plasma energetic particles and electric and magnetic fields the various and sometimes competing models and theories of magnetic reconnection This volume is aimed at researchers in solar physics magnetospheric physics and plasma physics Previously published in Space Science Reviews journal Vol 160 1 4 2011 **Magnetic Reconnection** William Lewis,2011-12-31 This volume covers different aspects of recent theoretical and observational work on magnetic reconnection a fundamental plasma physical process by which energy stored in magnetic field is converted often explosively into heat and kinetic energy This collection of papers from the fields of solar and space physics astrophysics and laboratory plasma physics is especially timely in view of NASA s upcoming Magnetospheric Multiscale mission which will use Earth s magnetosphere as a laboratory to test through in situ measurement of the plasma energetic particles and electric and magnetic fields the various and sometimes competing models and theories of magnetic reconnection This volume is aimed at

Microphysics of Cosmic Plasmas André Balogh, Andrei Bykov, Peter Cargill, Richard Dendy, Thierry Dudok de Wit, John Raymond, 2014-01-15 Presents a comprehensive review of physical processes in astrophysical plasmas This title presents a review of the detailed aspects of the physical processes that underlie the observed properties structures and dynamics of cosmic plasmas An assessment of the status of understanding of microscale processes in all astrophysical collisionless plasmas is provided The topics discussed include turbulence in astrophysical and solar system plasmas as a phenomenological description of their dynamic properties on all scales observational theoretical and modelling aspects of collisionless magnetic reconnection the formation and dynamics of shock waves and a review and assessment of microprocesses such as the hierarchy of plasma instabilities non local and non diffusive transport processes and ionisation and radiation processes In addition some of the lessons that have been learned from the extensive existing knowledge of laboratory plasmas as applied to astrophysical problems are also covered This volume is aimed at graduate students and researchers active in the areas of cosmic plasmas and space science Originally published in Space Science Reviews journal Vol 278 2 4 2013 *Magnetic Reconnection in Plasmas* D. Biskamp, 2000-09-14 This book first published in 2000 is a comprehensive introduction to this major topic in plasma physics for graduates and researchers **Reconstruction of Magnetic Reconnection Events** Thomas Penz, 2009 Magnetic reconnection is a basic process taking place in plasmas on Earth and in space After a general introduction this work focusses on magnetic reconnection in the Earth magnetosphere Because of the interaction between the solar wind and the terrestrial magnetic field magnetic field line merging is initiated under certain conditions leading to various phenomena like the polar aurora or the injection of high energetic particles influencing near Earth satellites The author presents a method to achieve detailed information about the reconnection process from remote satellite measurements Therefore an ill posed inverse problem is solved using regularization theory Using multi spacecraft measurements e g from the Cluster satellites it is possible to gain information about the spatial location of the reconnection event so this method presents a complementary approach to ground based and in situ satellite measurements The work combines a thorough analysis of theoretical space plasma problems with experimental data from satellite missions and numerical simulations to provide new insights in this exciting field of space physics
