MR Imaging and Spectroscopy of Central Nervous System Infection Rakesh K. Gupta, Robert B. Lufkin, 2001-07-31 This book covers issues related to imaging features of various CNS infections and defines the use of newer techniques such as magnetization transfer imaging spectroscopy and diffusion weighted imaging in various infections

Principles of Nuclear Magnetic Resonance in One and Two Dimensions Richard R. Ernst, Geoffrey Bodenhausen, Alexander Wokaun, 1987 Written by one of the world's leading NMR research teams this monograph presents the most comprehensive and up to date treatment of nuclear magnetic resonance spectroscopy available In the course of the last two decades nuclear magnetic resonance spectroscopy has undergone a dramatic renaissance and the authors provide a unified review of the entire field covering basic principles and techniques for the study of solutions and solids with emphasis placed on methods of one and two dimensional spectroscopy The material is presented in an intuitive manner with a large number of illustrations and a rigorous mathematical framework that should satisfy a wide audience

Magnetic Resonance Spectroscopy and Imaging in Neurochemistry Herman Bachelard, 2012-12-06 The Advances in Neurochemistry series was initiated for a readership of neuroscientists with a background in biochemistry True to this concept the present volume brings together various applications of magnetic resonance technology to advance our knowledge of how the nervous system functions Whether at the cellular tissue slice or intact organism level magnetic resonance techniques are by their nature noninvasive and thus provide a window through which biochemical reactions can be viewed without grinding binding or otherwise perturbing ongoing physiological processes As technological improvements in methodology such as higher and more uniform magnetic fields novel paradigms for data analysis etc are made we find increased sensitivity and improved temporal and spatial resolution for functional imaging techniques on the one hand and better separation of signals that identify chemical properties in spectral shift studies on the other It is upon knowledge such as is described in the twelve chapters that follow that further advances in scientific discovery and the biomedical applications of tomorrow will be based We are grateful to Dr Bachelard the Volume Editor and to the authors of the individual chapters for their efforts We also note that with this volume Dr Morris Aprison a co founder of the Advances in Neurochemistry series has stepped down and acknowledge with thanks his major role in its inception In addition we thank our past and present Advisory Editors Bernard W Agranoff Kunihiro Suzuki Series Editors ix CONTENTS
