Magnetic Resonance In Dementia:

Magnetic Resonance in Dementia Frederik Barkhof, Jaap Valk, Nick C. Fox, Philip Scheltens, 2013-12-21 The numerous ways in which man and animals are affected by their physical environment and the inborn and adaptive responses to change in the milieu exterieur have fascinated curious minds since the earliest days of recorded history Development of the scientific method with its emphasis on evidence obtained through experimentation perhaps best illustrated in this field by Paul Bert's encyclopedic work allowed several generations of our predecessors to establish firmly some facts and reject erroneous beliefs but it was only during the early 1940s that environmental physiology put on its seven league boots In 1941 a young physiologist named Hermann Rahn was recruited by Wallace O Fenn then Chairman of the Department of Physiology at the University of Rochester who was engaged in a study of the effects of altitude on human performance The years that followed witnessed some of Hermann Rahn's early achievements not only in the area of altitude but in other aspects of environmental physiology as well In particular he participated in the definitive studies of human adaptive mechanisms in arid climates which formed the basis of Edward Adolph's classic Physiology of Man in the Desert Wiley Interscience NY 1947 During those golden years environmental physiology flourished and important discoveries were reported in a seemingly endless stream from many laboratories

Magnetic Resonance of Myelination and Myelin Disorders Marjo S. van der Knaap, Jaap Valk, 2005-08-15. Our thanks go to our colleagues at the VU University Medical Center and to those in other hospitals. Reading through the prefaces of the two previous editions who referred their patients to us. We are indebted to them. We can say that much of what was said there still holds. At the same time, however, much has changed. Published or unpublished, making it possible for us to present illustrations of nearly all known white matter possibilities of magnetic resonance and in the known disorders. Two colleagues were particularly helpful: ledge of genetic defects, biochemical abnormalities and provided us with essential and unpublished data on cellular processes underlying myelin disorders. Our friends Susan Blaser from the Hospital for Sick Children in Toronto and Zoltan Patay from the King Faisal Hospital in Riyadh edition and adding 40 chapters. In doing so, we have many people at the VU University Medical Center tried to cover most white matter disorders. Hereditary have been of great technical help to us in producing and acquiring and to present a collection of images to high quality images and in providing secretarial assistance to illustrate the field to the fullest possible extent. This assistance. The contributions of these people are acknowledged. The edition will therefore be more complete than the pre-mentioned separately in the acknowledgements.
