ABSTRACT

The Biological Magnetic Resonance Data Bank (BMRB, <https://bmrbl.io>) is the international open data repository for biomolecular nuclear magnetic resonance (NMR) data. Comprised of both empirical and derived data, BMRB has applications in the study of biomacromolecular structure and dynamics, biomolecular interactions, drug discovery, intrinsically disordered proteins, natural products, biomarkers, and metabolomics. Advances including GHz-class NMR instruments, national and trans-national NMR cyberinfrastructure, hybrid structural biology methods and machine learning are driving increases in the amount, type, and applications of NMR data in the biosciences. BMRB is a Core Archive and member of the World-wide Protein Data Bank (wwPDB).

INTRODUCTION

NMR is one of the most versatile analytic methods for analyzing matter, using atomic nuclei as embedded reporters. Applications of NMR to biomolecular science include structure, dynamics, and interactions of biomacromolecules in the solid and liquid solution state, the identity and composition of complex mixtures of small molecule metabolites, and the structure of natural products. BMRB is the open, international online repository for all types of biomolecular NMR data.

BMRB was founded by John Markley and Eklon Ulrich at the University of Wisconsin in 1988. Initial depositions were made by curators manually entering chemical shifts and assignments extracted from publications. With the development of the Adit-NMR deposition system, the primary means of accessions became depositor-driven. In 2006, BMRB joined the World-wide Protein Data Bank (wwPDB) (1) as a member and Core Archive. BMRB facilitates accession and validation of NMR-based biomacro-

molecular structures deposited to PDB via the OneDep system. BMRBj operating from Osaka University processes depositions in addition to serving as a mirror site. Another mirror site operates from CERM (<https://bmrbl.cerm.unifi.it/>), at the University of Florence, IT. In 2020, BMRB moved to UConn Health in Farmington, CT.

BMRB depositions are linked to corresponding entries in PDB, the European Nucleotide Archive (2) (EMBL-EBI), the National Center for Biotechnology Information (3) (NCBI) and UniProt (4).

In addition to collaborations with wwPDB member organizations RCSB (5), PDBe (6), PDBj, (7) and EMDb (8), BMRB has close collaborations with the National Center for Biomolecular NMR Data Processing and Analysis (9) (NMRbox.org), the Center for High-Throughput Computing and the University of Wisconsin-Madison, the Collaborative Computing Project for NMR (10) (CCPN), Rutgers University, and the University of Frankfurt.

BMRBj (7), formerly known as PDBj-BMRB at Osaka, Japan, is a satellite BMRB repository that accepts NMR experimental data via three deposition servers, (i) OneDep depositions containing NMR experimental data from Asian countries and regions, (ii) BMRBdep deposition server at Osaka and (iii) SMSDep deposition server, which accepts NMR derived structures of biologically interesting small molecules that are ineligible for OneDep deposition due to the limit on molecular size. 10% of BMRB entries have been processed at Osaka site since 2002 (7). The BMRB and BMRBj sites share annotation tools and communicate closely on issues, assuring uniformity of annotation quality using either site.

Accessions

Data housed at the BMRB are deposited, archived, and disseminated in the NMR-STAR file format (11). NMR-STAR is a variant of the STAR file format (12–14) intro-

Magnetic Resonances in Biological Research Cafiero Franconi, 1971-01-01 **Magnetic Resonances in Biological Research, Edited by Cafiero Franconi** International Conference on Magnetic Resonances in Biological Research, 3D, Santa Margherita, Cagliari, Italy, 1969, Cafiero Franconi (Ed), 1971 *Biological Magnetic Resonance* Lawrence J. Berliner, Jacques Reuben, 2012-12-06 We are pleased to present Volume 9 of our highly successful series which now celebrates 12 years of providing the magnetic resonance community with topical authoritative chapters on new aspects of biological magnetic resonance As always we try to present a diversity of topic coverage in each volume ranging from applications of in vivo magnetic resonance to more fundamental aspects of electron spin resonance and nuclear magnetic resonance Philip Yeagle presents an eagerly awaited chapter on ^{31}P NMR studies of membranes and membrane protein interactions Alan Marshall has contributed two chapters to the volume one with Jiejun Wu describes magnetic resonance studies of 5S RNA as probes of its structure and conformation the second **Biological Magnetic Resonance** Lawrence Berliner, 2012-12-06 Judging from the articles published in Biochemistry magnetic resonance techniques NMR and ESR are now among the most popular methods in biochemical research The series Biological Magnetic Resonance the fifth volume of which we are proudly presenting is intended to provide authoritative coverage of topics of current interest Previous volumes have covered a number of aspects in a thorough and pedagogical fashion rarely found in other publications in this field Continuing to fulfill the mission of the series this volume presents a chapter by Baxter Mackenzie and Scott on the applications of carbon ^{13}C NMR spectroscopy in investigations of metabolic pathways in vivo Blomberg and Ruterjans give a comprehensive summary of the use of nitrogen ^{15}N NMR in studies of systems of biological interest Phosphorus ^{31}P NMR investigations of enzyme systems are described by Rao Tsai and Bruzik outline the principles of and summarize the state of the art advances in the use of oxygen isotopes ^{17}O and ^{19}F in phosphorus ^{31}P and oxygen ^{17}O NMR studies of biophosphates Lipid protein interactions as reflected in ESR and NMR data are discussed by Devaux We wish to thank the authors for their cooperation in maintaining the and continued high standards of the series **Magnetic Resonance in Biological Systems** A. Ehrenberg, B. G. Malmström, T. Vänngård, 2013-09-24 Magnetic Resonance in Biological Systems Volume 9 is a collection of manuscripts presented at the Second International Conference on Magnetic Resonance in Biological Systems held in Wenner Gren Center Stockholm Sweden on June 1966 The conference is sponsored by International Union of Biochemistry Swedish Medical Research Council Swedish Natural Science Research Council Wenner Gren Center Foundation for Scientific Research This book contains 51 chapters and begins with reviews of NMR investigations of biological macromolecules including proteins amino acids and glycylglycine copper II Considerable chapters are devoted to numerous biological studies using the electronic paramagnetic resonance EPR thus introducing the branch of science called submolecular biology This book also explores other applications of NMR and EPR with special emphasis on blood component analysis and protein metal

complexes The final chapters survey the principles and applications of Mossbauer spectroscopy This book will prove useful to analytical chemists and biologists

Biological Magnetic Resonance Lawrence Berliner, 2012-12-06 We have now reached our sixth volume in a series which has somewhat unintentionally become an annual event While we still intend to produce a volume only if a suitable number of excellent chapters in the forefront of biological magnetic resonance are available our philosophy is to present a pedagogical yet critical description and review of selected topics in magnetic resonance of current interest to the community of biomedical scientists This volume fulfills our goals well As always we open the volume with a chapter which directly addresses an in vivo biological problem Phil Bolton's presentation of new techniques in measuring ^{31}P NMR in cells Lenkinski's chapter on the theory and applications of lanthanides in protein studies covers the details highlights and pitfalls of analysis of these complexes in biochemical NMR Reed and Markham summarize the interpretation of EPR spectra of manganese in terms of structure and function of proteins and enzymes Dalton and colleagues describe the applications to biological problems of the relatively new capability of time domain ESR Finally we are pleased to offer a departure from mainstream magnetic resonance with the comprehensive and stimulating chapter by Gus Maki on the theory instrumentation and applications of optically detected magnetic resonance
