efficacement l'amélioration des méthodes et techniques pour maîtriser la qualité des produits. Ces travaux pluridisciplinaires couvrent des domaines aussi différents que l'informatique, l'organisation et la statistique. Ce mémoire de thèse a été structuré en trois contributions distinctes : une intégration des données issues du processus de contrôle qualité dans un système d'information unifié, une réalisation d'un modèle qualimétrique pour valuer la mise en place d'un modèle normatif d'assurance qualité, une analyse critique des conditions d'utilisation des plans d'expériences pour optimiser les procédés.

Contribution méthodologique à la maîtrise conjointe de la qualité d'un produit et de ses processus de production par une modélisation des concepts qualité Salah Deeb, 2008

La qualité est devenue aujourd'hui un véritable outil stratégique pour faire face aux nouveaux enjeux économiques et sociaux de l'entreprise grâce son impact sur la maîtrise conjointe de la qualité du produit et des processus supports sa production. Cette maîtrise est directement liée à l'organisation cohérente d'un ensemble d'activités qualité qui se positionnent sur les différents niveaux structurels de l'entreprise. Un des challenges majeurs est donc de faire du processus qualité un processus au sens système, c'est-à-dire un processus intégrant de façon efficace les différentes activités qualité sur les différents niveaux et avec les autres processus de l'entreprise. Relativement ce challenge plusieurs méthodologies et méthodes qualité supportent tout ou partie de la modélisation du processus qualité mais leur manque de formalisation nuit à l'efficacité et à l'efficience de leur application. En réponse ce double constat d'intégration et de manque de formalisation, notre contribution porte sur la proposition d'une approche qualité globale permettant de formaliser un processus qualité au niveau tactique en lien avec les autres niveaux de l'entreprise. Cette approche se positionne en cohérence avec le TQM dans l'objectif de maîtriser et d'améliorer conjointement la qualité du produit, processus de production. Elle se veut utilisable par son automatisation avec l'outil MEGA de la conception, l'exploitation du processus de maîtrise de la qualité. L'originalité de ces travaux réside dans une première unification sous la forme de méthodes des concepts qualité sur la base de l'approche processus définie dans la norme ISO9000:2000 de la fonction management de qualité telle que prévue par la norme IEC ISO62264 des méthodes qualité et finalement de la modélisation d'indicateurs pertinents. La faisabilité de cette approche est montrée sur un cas d'application de type processus manufacturier.

Méthodes et outils pour résoudre un problème Alain-Michel Chauvel, 2004

La qualité est devenue une exigence fondamentale qui peut sanctionner la réussite ou l'échec d'une entreprise. L'entrepreneur doit mettre en œuvre tous les moyens nécessaires pour maîtriser la qualité tous les niveaux de l'organisation de l'entreprise. Maîtriser la qualité, c'est répondre deux objectifs : limiter les non-conformités, améliorer le système de façon continue tout au long d'un processus unique qui doit conduire la satisfaction du client. Refusant l'affrontement entre tenants de l'assurance qualité et partisans du management par la qualité, l'auteur propose de concilier ces deux approches complémentaires. Il définit une méthodologie et un ventail d'outils pour résoudre les problèmes que chacun rencontre dans son travail quotidien. Chaque outil est détaillé point par point puis illustré par des cas d'entreprises provenant de tous les secteurs d'activité. Cette nouvelle dition intègre les outils pour la ma
