Problems in the General Theory of Relativity and Theory of Group Representations N. G. Basov, 2012-12-06 This collection contains survey articles dealing with the following topics The Mach principle and its role in the general theory of relativity the modern conception of the vacuum new methods in the theory of Lie group representations the coherent state method and its application to physical problems and the Newman Penrose method and its application to problems in general relativity theory

The Dissipation of Electromagnetic Waves in Plasmas N. G. Basov, 2012-12-06 This anthology includes articles on experimental studies of the interaction of high power electromagnetic waves with collisionless plasmas and with electrons The nonlinear interaction of waves with plasmas has been investigated both under free space conditions and in waveguides A study of secondary emission discharges was made in order to ascertain their possible effect on measurements in waveguides The results presented here on the interaction of high power waves with plasmas and electrons are of interest to a wide range of physicists and engineers concerned with various questions on the interaction of electromagnetic radiation with plasmas including microwave heating of plasmas and laser fusion v CONTENTS An Experimental Investigation of Nonlinear Dissipation of Electromagnetic Waves in Inhomogeneous Collisionless Plasmas G M Batanov and V A SHin 1 Collisionless Absorption of Electromagnetic Waves in Plasmas and Slow Nonlinear Phenomena V 1 Barinov 1 R Gekker V A Ivanov and D M Karfidov 25 Nonlinear Effects in the Propagation of Electron Plasma Waves in an Inhomogeneous Plasma Layer V A SHin 53 A Study of Secondary Emission Microwave Discharges with Large Electron Transit Angles L V Grishin A A Dorofeyuk 1 A Kossyi G S Luk yanchikov and M M Savchenko 63

Exciton and Domain Luminescence of Semiconductors N. G. Basov, 2012-12-06 This volume which comprises a collection of papers by leading Soviet researchers is devoted to topics in the luminescence of semiconductors An experimental check is made on a series of predictions of the theory of ionization domains A new low voltage luminescence of zinc sulfide is described and investigated and is found to be due to a high frequency electrical instability A detailed study of the electrical properties of the instability and of the characteristics of the emission testifies to the pre breakdown character of the electroluminescence and to the acousto electrical nature of the instability The luminescence excitation spectra of AlN crystals excited in the region of the fundamental absorption contain lines belonging to excitons and their phonon replicas The symmetry of the electronic and vibrational transitions corresponding to parts of these lines is interpreted The results of a study of the scattering of light by electron hole drops in germanium are cited The results are discussed on the basis of a theory of exciton condensation in which allowance is made for the diffusion of excitons toward the surface of the drops and for the surface tension of the electron hole liquid This volume will be of interest to a wide range of scientific workers particularly those engaged in the study of luminescence and physics of semiconductors
