Measured Word:

The Measured Word Kurt Brown, 2001 Though the interests of science and art frequently seem to inhabit opposite poles The Measured Word assembles a brilliant anthology of twelve essays that illumine the historic and newly emerging relationships between the poetic and scientific imaginations Assembling the writings of leading contemporary poets essayists and thinkers Kurt Brown highlights ways in which poets use scientific discoveries and mathematical ideas to their artistic advantage and offers insight on the recently apparent integration of technology and other discoveries into the postmodernist poetry Here are meditations on the similarities and differences between the poetic and scientific imagination on the poetic use of fractals on hypertext on the changing shape of poetry in the scientific age Commentary by Czech poet and immunologist Miroslav Holub Paul Lake Alison Hawthorne Deming Alice Fulton Forrest Gander and Stephanie Strickland among others presents a diverse selection of opinions These viewpoints are complemented by many careful innovative readings of individual poems informed by the sciences The writings in this collection not only celebrate the advent of a new age of discovery but also identify the need for a revision of the western thinking that separates the mind and the heart replacing division with the reciprocity of mutual communication

Measuring Up John Sabatini, Elizabeth Albrow, Tenaha O'Reilly, 2012-06-07 In recent decades the science of reading acquisition has been advancing through interdisciplinary research in cognitive psycholinguistic developmental genetic neuroscience cross language and experimental comparison studies of effective instruction Some of the science of reading has emerged from the theory and research into the realm of practice and policy Yet the science and practice of measuring reading comprehension has remained relatively immune to much of this foundational knowledge Measuring Up questions the traditional format of reading comprehension tests typically a single series of questions asked about a series of passages and offers ideas and innovations we might expect in a next generation of 21st century reading assessments Sabatini Albrow and O'Reilly believe that in light of the move towards Common Core State Standards and assessments as well as significant national investments in reading and literacy education it is a critical and opportune time to bring together the research and measurement community to address fundamental issues of measuring reading comprehension both in theory and in practice

Automatic Assessment of Prosody in Second Language Learning Florian Hönig, 2017 Worldwide there is a universal need for second language language learning It is obvious that the computer can be a great help for this especially when equipped with methods for automatically assessing the learner s pronunciation While assessment of segmental pronunciation quality i e whether phones and words are pronounced correctly or not is already available in commercial software packages prosody i e rhythm word accent etc is largely ignored although it highly impacts intelligibility and listening effort The present thesis contributes to closing this gap by developing and analyzing methods for automatically assessing the prosody of non native speakers We study the detection of word accent errors and the general assessment of the appropriateness of a speaker s rhythm We propose a flexible generic approach that is a very successful on these tasks b competitive to other state of the

Ram,2000 **Explaining Russian-German code-mixing** Nikolay Hakimov,2021 The study of grammatical variation in language mixing has been at the core of research into bilingual language practices Although various motivations have been proposed in the literature to account for possible mixing patterns some of them are either controversial or remain untested Little is still known about whether and how frequency of use of linguistic elements can contribute to the patterning of bilingual talk This book is the first to systematically explore the factor usage frequency in a corpus of bilingual speech The two aims are i to describe and analyze the variation in mixing patterns in the speech of Russia German adolescents and young adults in Germany and ii to propose and test usage based explanations of variation in mixing patterns in three morphosyntactic contexts the adjective modified noun phrase the prepositional phrase and the plural marking of German noun insertions in bilingual sentences In these contexts German noun insertions combine with either Russian or German words and grammatical markers thus yielding mixed bilingual and German monolingual constituents in otherwise Russian sentences the latter also labelled as embedded language islands The results suggest that the frequency with which words are used together mediates the distribution of mixing patterns in each of the examined contexts The differing impacts of co occurrence frequency are attributed to the distributional and semantic specifics of the analyzed morphosyntactic configurations Lexical frequency has been found to be another important determinant in this variation Other factors include recency or lexical priming in discourse in the case of prepositional phrases and phonological and structural similarities and differences in the inflectional systems of the contact languages in the case of plural marking
