Meyerson, Christoph Ostertag, 2012-12-06 This volume contains selected contributions from the XIth Meeting of the European Society for Stereotactic and Functional Neurosurgery held in September 1994 in Antalya Turkey Most of the papers deal with the many therapeutic and technical advancements made in this field of neurosurgery The emergence of new stereotactic methodologies such as frameless stereotaxy and other forms of neuronavigation have become an indispensable tool for all types of neurosurgical operations An increasing number of young neurosurgeons takes an interest in the neurosurgical approaches to the treatment of movement disorders chronic pain and epilepsy This is a clear sign of the growing awareness of the long neglected fact that these neurosurgical treatments can be offered to large patient populations Neurotransplantation as a novel treatment of Parkinson's disease has paved the way for the application of this technology for other indications The pioneering work performed by the late Edward Hitchcock is reviewed here There is a renewed interest in pallidotomy for dealing with certain forms of Parkinson's disease and certain aspects of this operation are discussed in another paper Progress in the neurosurgical treatment of pain is dealt with by contributions on refined techniques of percutaneous cordotomy DREZ operations and critical evaluations of spinal cord stimulation A novel approach is a report on the experiences of treating cancer pain by intraspinal implantation of chromaffin cells Several contributions cover the important issues of novel techniques for the study of neural dysfunction preoperative monitoring with PET microrecording magnetoencephalography and other techniques **Key Concepts in MIN - Intracerebral Hemorrhage Evacuation** Klaus Dieter Maria Resch, 2020-12-14 This is the first of four volumes that together elaborate on an advanced minimally invasive neurosurgery MIN technique for cerebral hemorrhages which makes it possible to prevent secondary injury by the hematoma and to preserve neurological function and accelerate neuropsychological recovery after the evacuation It describes in detail the theoretical technical and training procedures necessary to carry out successful intracerebral hemorrhage evacuations using MIN techniques A combination of mouth tracked microsurgery neurosonography neuroendoscopy LASER and sealing makes highly effective minimally invasive evacuation of all types of hematomas possible The MIN Key Concept an advanced new model based on the Keyhole Concept and MIN techniques is also presented Lastly the scientific basics of MIN are discussed and summarized A historical curriculum vitae is included in memory of the main pioneer of innovative MIN techniques Prof Axel Perneczky to whom this book is dedicated *Minimally Invasive Spine Surgery* Frank M.
